## PREFACE.

---

By the Constitution of the Commonwealth of Australia, the Commonwealth is empowered "to make laws for the peace, order, and good government of the Commonwealth, with respect to," *inter alia*, "Census and Statistics." In the exercise of the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The first Official Year Book was published early in 1908. The publication here presented is the eleventh authoritative Year Book issued under the Federal Constitution.

This Year Book furnishes corrected statistics for the whole period of Australian settlement, viz., from 1788 to 1917. Wherever space has permitted, detailed statistics have been furnished for each year since Federation, viz., from 1901 to 1917. In the few instances where this has proved impracticable, reference will be necessary to Year Books Nos. 1 to 10. The inclusion, as stated, of the total available information in the more important branches of statistics enables this publication to be used wherever it is desired to make a comparative survey of the evolution of this portion of the British Empire. Not only are the results given for the Commonwealth as a whole, but also for each State therein.

The general arrangement of the publication, which has received wide approval, corresponds with that of previous issues, and is shewn in the synopsis on pp. xiii. to xxix. immediately following.

In addition, however, to what may be called purely statistical matter, each issue contains special articles dealing at length with some particular subject or subjects of more or less permanent interest. These cannot of course be repeated year after year, but in some instances a brief condensation is given in subsequent issues. Though many articles in Year Books Nos. 1 to 10 have been reduced to synopses or deleted, sufficient indication is given to enable the subject to be traced in previous issues.

The present issue contains a specially-contributed article, dealing with "The Climatic Factors Influencing Settlement in Australia," a matter of outstanding importance, in view of post-war world developments.

Amongst new matter incorporated in the various sections, mention may be made of the Australian Life Tables appearing at the end of the section dealing with Vital Statistics. The latest available information *re* the Commonwealth Wheat Scheme will be found in the Agriculture Section and the Appendix thereto. The Shipping Section gives details of the Commonwealth activity in connection with the construction and control of shipping, the Railways Section contains a description of the Trans-Australian Railway, while a short reference to the subject of Repatriation appears at the close of the section dealing with Defence, and the Miscellaneous section contains some interesting details regarding anthropometric measurement of cadets. In the Miscellaneous section also will be found a reference to the subject of standard times in Australia.

The subject matter throughout is dealt with, as far as possible, from the following points of view, viz.:—

(i.) The development of the individual States. (ii.) The progress of Australia as a whole from the earliest times. (iii.) The statistical comparison of Australia with other leading countries of the world.

The full text of the Commonwealth Constitution Act and Amendments appears on pages 15 to 34.

A feature of this publication is the use made of maps and diagrams. As a rule, facts can be properly appreciated only by the use of graphs, and the progress of events, the characteristics of growth and decline, can in general be grasped much more readily graphically than numerically. The diagram or "graph" is a direct picture in which the relative magnitudes are preserved and by which instantaneous comparisons of a wide range of facts are made possible at a glance. The statistical data, however, are also given *in extenso* numerically. Special mention may be made of the map of Australia—inset on the back cover—which has been reduced from the large scale map published under the authority of the Minister for Home and Territories from data supplied by the several States. Since the issue in Year Book No. 9, important alterations and additions have been made.\*

The development of Australia has been in many instances very remarkable, and this could be shewn only by tables and graphs dating back to its beginning in 1788. In most cases accurate data are not available for years much before 1860. In such cases, therefore, it would appear sufficient at present to give continuous results from that year onwards.

The great mass of material embodied in each Year Book is always carefully examined, but it would be idle to hope that all error has been avoided. The Commonwealth Statistician desires to express appreciation of the opportunity afforded him of perfecting the matter of the Year Book, by those who have been kind enough to point out defects or make suggestions.

---

\* The work of revision was undertaken in the office of the Commonwealth Chief Surveyor  
J. T. H. Goodwin, Esq.

The corresponding years indicated in various sections of this book do not always necessarily refer to the same period, the year ending in some cases on 31st December, 30th June, or 31st March, etc. The precise period for which returns are given is indicated where necessary.

Recent information or returns which have come to hand since the various Sections were sent to press, may be found in the Appendix, p. 1210.

The last three Year Books (Nos. 9, 10 and 11) are somewhat later in appearance than preceding issues. This is due to a combination of circumstances: (a) the change in the trade year from the calendar to the financial year; and (b) lateness in receipt of various returns occasioned by special circumstances arising out of the war or otherwise unavoidable.

It is hoped eventually to secure "Production" returns from all the States for the financial year, and the enhanced value of the figures for comparative purposes would more than counterbalance the slightly later issue of the Year Book.

In conclusion, the Commonwealth Statistician desires to express his cordial thanks to the State Statisticians, to the responsible officers of the various Commonwealth and State Departments, and to others, who have kindly, and often at considerable trouble, supplied all desired information.

G. H. KNIBBS,

*Commonwealth Statistician.*

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,  
*Melbourne, 20th November, 1918.*

---

## CORRIGENDA.

---

Page 98, line 9, for "between the ten and twenty-inch isohyet," read "between the ten and twenty-inch winter isohyet."

In the second table on page 852, substitute £6 1s. 11d. for £5 17s. 0d. in the case of the year 1914, Victoria.

# INDEX TO SPECIAL ARTICLES, ETC., APPEARING IN PREVIOUS ISSUES.

These articles have appeared in former issues of the Commonwealth Year Book, but, owing to exigencies of space, they are not included in this publication.

NOTE.—The Roman figures indicate the number of the Year Book to which reference is made.

## SECTION VII.—PASTORAL PRODUCTION.

<b>§ 1. Initiation and Growth of Pastoral Industry</b>		2. Distribution throughout C'wealth... ..	317
1. Early Statistics ... ..	305	3. Proportion in the several States ... ..	317
2. Subsequent Statistics ... ..	305	4. Oversea Imports & Exports of Sheep ... ..	318
3. Increase in Numbers ... ..	305	5. Sheep Slaughtered ... ..	318
4. Fluctuations ... ..	306	6. Exports of Mutton and Lamb preserved by Cold Process ... ..	318
5. Live Stock in Relation to Population ... ..	306	7. Comparison with other Countries ... ..	319
6. Live Stock in Relation to Area ... ..	306	8. Relation to Population ... ..	320
7. Minor Classes of Live Stock ... ..	307	<b>§ 5. Wool</b>	
8. Net Exports of Principal Pastoral Products ... ..	307	1. Importance of Wool Production ... ..	320
<b>§ 2. Horses</b>		2. Greasy and Scoured Wool ... ..	323
1. Suitability of Australia for Horse-breeding ... ..	308	3. Total Production ... ..	323
2. Distribution through the C'wealth... ..	308	4. Wool Locally Used ... ..	324
3. Proportion in the several States ... ..	309	5. Bounties on Combed Wool or Tops Exported ... ..	324
4. Oversea Export Trade in Horses ... ..	309	6. Exports of Wool ... ..	325
5. Comparison with other Countries ... ..	311	7. Care needed in Comparing Clips ... ..	326
6. Relation to Population ... ..	312	8. Wool-producing Countries in Southern Hemisphere ... ..	326
<b>§ 3. Cattle</b>		9. United Kingdom Importation of Wool ... ..	326
1. Purposes for which Raised ... ..	312	10. The Wool Market ... ..	327
2. Distribution throughout C'wealth ... ..	312	<b>§ 6. Hides and Sheepskins</b>	
3. Proportion in each State ... ..	313	1. Extent of Trade ... ..	332
4. Imports and Exports of Cattle ... ..	313	2. Sheepskins with Wool ... ..	332
5. Cattle Slaughtered ... ..	314	3. Sheepskins without Wool ... ..	333
6. Export of Beef preserved by Cold Process ... ..	314	4. Hides... ..	334
7. Comparison with other Countries ... ..	315	<b>§ 7. Graphical Representation of Pastoral Production</b>	
8. Relation to Population ... ..	316	1. General ... ..	335
<b>§ 4. Sheep</b>		2. Horses ... ..	335
1. The Founding of the Commonwealth Pastoral Industry ... ..	316	3. Cattle ... ..	335
		4. Sheep ... ..	335
		5. Pigs ... ..	335

## SECTION VIII.—AGRICULTURAL PRODUCTION.

<b>§ 1. Introductory</b>		4. Relation to Total Area... ..	338
1. Early Attempts at Agriculture ... ..	336	5. Artificially-sown Grasses ... ..	338
2. The First Sowing ... ..	336	<b>§ 3. Relative Importance of Crops</b>	
3. Discovery of Suitable Agricul. Land ... ..	336	1. Various Crops ... ..	339
<b>§ 2. Progress of Agriculture</b>		2. Relative Areas of Crops in States and Territories ... ..	339
1. Early Records ... ..	336	3. Relative Positions of States and Territories in regard to Crops ... ..	340
2. Progress of Cultivation since 1860 ... ..	337	4. Acreage of Principal Crops, Cw'ith. ... ..	341
3. Relation to Population ... ..	337		

§ 4. Wheat	PAGE
1. Progress of Wheat-growing ...	341
2. Australian & Foreign Wheat Yields ...	343
3. Wheat Crops of the World ...	344
4. Prices of Wheat ...	345
5. Imports, Exports of Wheat & Flour ...	345
6. Value of the Wheat Crop ...	348
7. The Australian Wheat Marketing Scheme ...	348
§ 5. Oats	
1. Progress of Cultivation ...	351
2. Total Yield ...	351
3. Average Yield ...	352
4. Relation to Population ...	352
5. Value of Oat Crop ...	352
6. Imports and Exports ...	353
7. Oatmeal, etc. ...	353
8. Comparisons with other Countries ...	353
9. Comparison of Yields ...	353
10. Price of Oats ...	354
§ 6. Maize	
1. States Growing Maize ...	354
2. Area under Maize ...	354
3. Total Yield ...	355
4. Average Yield ...	355
5. Value of Maize Crop ...	356
6. Relation to Population ...	356
7. Australian and Foreign Maize Production ...	356
8. Comparison of Yields ...	356
9. Oversea Imports and Exports ...	357
10. Prepared Maize ...	357
11. Price of Maize ...	357
§ 7. Barley	
1. Area under Barley ...	358
2. Total Yield ...	358
3. Malting and other Barley ...	359
4. Total Acreage and Yield ...	359
5. Value of Barley Crop ...	360
6. Relation to Population ...	360
7. Commonwealth Imports & Exports ...	360
8. C'wealth Imports & Exports of Malt ...	361
9. Comparison with other Countries ...	361
10. Average Yield of Barley per acre in various Countries ...	362
11. Average Yield ...	362
12. Price of Barley ...	362
§ 8. Other Grain and Pulse Crops ...	363
§ 9. Potatoes	
1. Area ...	363
2. Total Yield ...	363
3. Average Yield per Acre ...	364
4. Value of Potato Crop ...	364
5. Relation to Population ...	364
6. Commonwealth Imports & Exports ...	364
7. Comparison with other Countries ...	365
§ 10. Other Root and Tuber Crops	
1. Nature and Extent ...	366
2. Commonwealth Imports & Exports ...	366
§ 11. Hay	
1. Nature and Extent ...	366
2. Kinds of Hay ...	367
3. Total Yield ...	368
4. Value of Hay Crop ...	368
5. Average Yield per Acre ...	368
6. Relation to Population ...	369
7. Oversea Imports and Exports ...	369
8. Hay Production in other Countries ...	369
§ 12. Green Forage	
1. Nature and Extent ...	370
2. Value of Green Forage Crops ...	370
3. Relation to Population ...	370

§ 13. Sugar Cane	PAGE
1. Area ...	371
2. Productive and Unproductive Cane ...	371
3. Yield of Cane and Sugar ...	371
4. Average Yields of Cane and Sugar per Acre ...	372
5. Quality of Cane ...	372
6. Relation to Population ...	373
7. Sugar Bounties ...	373
8. Sugar Purchase by Commonwealth Government ...	374
9. Beet Sugar ...	374
10. Acreage and Yield of Sugar Beet ...	374
11. Imports and Exports of Sugar ...	374
§ 14. Vineyards	
1. Nature and Extent ...	375
2. Wine Production ...	375
3. Relation to Population ...	376
4. Imports and Exports ...	376
5. Other Viticultural Products ...	377
9. Imports and Exports ...	377
§ 15. Orchards and Fruit Gardens	
1. Nature and Extent ...	378
2. Relation to Population ...	379
3. Commonwealth Imports & Exports ...	380
4. Jams and Jellies ...	381
5. Preserved Fruit ...	381
§ 16. Minor Crops	
1. Nature and Extent ...	381
2. Market Gardens ...	382
3. Grass Seed ...	382
4. Tobacco ...	383
5. Pumpkins and Melons ...	383
6. Hops ...	383
7. Millet ...	383
8. Nurseries ...	383
9. Cotton ...	383
10. Coffee ...	384
11. Other Crops ...	384
§ 17. Bounties on Agricultural Products	
1. General ...	384
§ 18. Fertilisers	
1. General ...	385
2. Fertilisers Acts ...	385
3. Imports ...	385
4. Exports ...	386
5. Statistics of Use of Fertilisers ...	389
6. Local Production of Fertilisers ...	390
7. Benefits Derived from the Use of Fertilisers ...	390
§ 19. Ensilage	
1. Value to Stockowners ...	391
2. Government Assistance in the Production of Ensilage ...	391
3. Quantity made ...	391
§ 20. Agricultural Colleges and Experimental Farms	
1. Introduction ...	392
2. Particulars of Agricultural Colleges and Experimental Farms ...	392
3. New South Wales ...	393
4. Victoria ...	394
5. Queensland ...	394
6. South Australia ...	394
7. Western Australia ...	395
8. Tasmania ...	395
§ 21. Government Loans to Farmers	
1. Introduction ...	395
2. Aggregate of Transactions in each State, 1913 to 1917 ...	396
3. Legislation in each State ...	396
4. Particulars respecting Agricultural and Stock Departments ...	396
§ 22. Graphical Representation of Crops	
1. Areas of Principal Crops ...	396
2. Production ...	396

## SECTION IX.—FARMYARD AND DAIRY PRODUCTION.

	PAGE		PAGE
<b>§ 1. Introductory</b>		<b>§ 5. Bee Farming</b>	
1. General ... ..	397	1. The Bee Farming Industry ... ..	405
2. Official Supervision of Industry ... ..	397	2. Production of Honey and Beeswax ... ..	406
3. Mixed Farming ... ..	397	3. Oversea Trade in Bee Products ... ..	407
4. Factory System ... ..	397		
5. Butter and Cheese Factories ... ..	398	<b>§ 6. Summary of Australian Farmyard and Dairy Products</b> ... ..	407
<b>§ 2. Milk, Butter, and Cheese</b>		<b>§ 7. Summary of Australian Farmyard and Dairy Products Exported, 1912 to 1916-17</b> ... ..	408
1. Dairy Herds ... ..	398	<b>§ 8. British Imports of Dairy Products</b>	
2. Milk ... ..	398	1. Value of Britain's Imports of Dairy Products ... ..	408
3. Butter and Cheese ... ..	399	2. Butter ... ..	409
4. Concentrated Milk ... ..	400	3. Cheese ... ..	409
5. Oversea Trade in Milk, Butter, and Cheese ... ..	400	4. Bacon and Ham ... ..	409
6. Local Consumption of Butter and Cheese ... ..	401	5. Pork ... ..	409
<b>§ 3. Pigs, Bacon, etc.</b>		6. Other Products ... ..	409
1. Pigs ... ..	401	<b>§ 9. Graphical Representation of Dairy Production</b> ... ..	409
2. Bacon and Ham ... ..	401		
3. Oversea Trade in Pig Products ... ..	402		
4. Local Consumption of Bacon and Ham ... ..	403		
5. Total Dairy Production ... ..	403		
<b>§ 4. Poultry Farming</b>			
1. Development of the Industry ... ..	404		
2. Production of Poultry ... ..	404		
3. Oversea Trade in Poultry Products ... ..	404		

## SECTION X.—FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

<b>§ 1. The Forests of Australia</b>		<b>§ 3. Commercial Uses of Principal Australian Timbers</b>	
1. Extent of Forests ... ..	410	1. General ... ..	413
2. Distribution of Timber ... ..	411	2. Uniformity of Nomenclature ... ..	413
<b>§ 2. Forestry</b>		<b>§ 4. Forestal Industries and Production</b>	
1. Objects ... ..	411	1. Timber ... ..	413
2. Forestry Departments ... ..	411	2. Other Forest Produce ... ..	414
3. Sylvicultural Nurseries and Plantations ... ..	411	<b>§ 5. Oversea Trade</b>	
4. Revenue and Expenditure ... ..	412	1. Imports ... ..	414
5. Instruction in Scientific Forestry ... ..	413	2. Exports ... ..	415
6. Forest Congresses ... ..	413		

## SECTION XI.—FISHERIES AND PISCICULTURE.

<b>§ 1. Commercial Fisheries</b>		<b>§ 5. The Commonwealth Department of Fisheries</b>	
1. Fish Stocks ... ..	421	1. The Federal Council of Australasia ... ..	427
2. Economic Fisheries ... ..	421	2. Commonwealth Investigations ... ..	427
3. Distribution of Supplies ... ..	421	3. Scope of the Inquiry ... ..	427
4. Oyster Fisheries ... ..	421	4. The F.I.S. "Endeavour" ... ..	428
5. Pearl-shelling, etc. ... ..	421	5. Trawling Grounds discovered by the "Endeavour" ... ..	428
<b>§ 2. Fisheries Statistics</b>		6. The Continental Shelf ... ..	428
1. Estimates for the Commonwealth ... ..	422	7. Publications of the Commonwealth Fisheries Department ... ..	429
<b>§ 3. Oversea Trade in Fish</b> ... ..	425	<b>§ 6. The State Trawling Industry.—New South Wales</b> ... ..	430
<b>§ 4. Development of the Fishing Industry</b>		<b>§ 7. Fish Preserving</b> ... ..	430
1. Transport and Marketing ... ..	426		
2. Experiment and Culture ... ..	426		
3. Consumption of Fish ... ..	427		

## SECTION XII.—MINES AND MINING.

<b>§ 1. The Mineral Wealth of Australia</b>	<b>PAGE</b>
1. Place of Mining in Australian Development	431
2. Extent of Mineral Wealth	431
3. Value of Production during 1916	431
4. Total Production to end of 1916	432
(A) METALS.	
<b>§ 2. Gold</b>	
1. Discovery of Gold in various States	433
2. Production of Gold at various Periods	433
3. Changes in Relative Positions of States as Gold Producers	435
4. Methods of Gold Mining adopted in each State	435
5. Remarkable Masses of Gold	439
6. Modes of Occurrence of Gold in Aust.	439
7. Place of Commonwealth in the World's Gold Production	439
8. Employment in Gold Mining	440
<b>§ 3. Platinum and the Platinoid Metals</b>	
1. Platinum	441
2. Osmium, Iridium, etc.	441
<b>§ 4. Silver</b>	
1. Occurrence in each State	442
2. Development of Silver Mining	442
3. Chief Centres of Silver Production	443
4. World's Production of Silver	444
5. Prices of Silver	444
6. Employment in Silver Mining	445
<b>§ 5. Copper</b>	
1. Production of Copper	445
2. Sources of Production	446
3. Prices of Copper	447
4. World's Production of Copper	447
5. Employment in Copper Mining	447
<b>§ 6. Tin</b>	
1. Production of Tin	448
2. Sources of Production	448
3. World's Production of Tin	449
4. Prices of Tin	449
5. Employment in Tin Mining	450
<b>§ 7. Zinc</b>	
1. Production of Zinc	450
2. Prices of Zinc	451
<b>§ 8. Iron</b>	
1. General	451
2. Production of Iron	452
<b>§ 9. Other Metals</b>	
1. Antimony	456
2. Arsenic	456
3. Barium	456
4. Bismuth	456
5. Chromium	457
6. Carnotite	457
7. Cobalt	457
8. Lead	457
9. Mercury	457
10. Manganese	457
11. Molybdenum	458
12. Radium	458
13. Tungsten	458
14. Tantalum	459
15. Uranium	459

(B) NON-METALLIC MINERALS		<b>PAGE</b>
<b>§ 10. Coal</b>		
1. Production in each State	459	
2. Distribution and Quantity of Coal in each State	460	
3. Production of Coal various Countries	464	
4. Export of Coal	464	
5. Consumption of Coal in Australia	465	
6. Price of Coal	466	
7. Price of Coal in other Countries	467	
8. Employment and Accidents in Coal Mining	468	
<b>§ 11. Coke</b>		
1. Production of Coke	468	
<b>§ 12. Oil Shale and Mineral Oils</b>		
1. Production of Shale	469	
2. Export of Shale	470	
3. Shale Oils Bounties	470	
<b>§ 13. Other Non-metallic Minerals</b>		
1. Alunite	470	
2. Asbestos	471	
3. Barytes	471	
4. Clays and Pigments	471	
5. Coorongite	471	
6. Fuller's Earth	471	
7. Graphite	471	
8. Gypsum	473	
9. Magnesite	473	
10. Tripolite or Diatomaceous Earth	473	
11. Salt	473	
12. Natural Manures	473	
<b>§ 14. Gems and Gemstones</b>		
1. Diamonds	473	
2. Sapphires	473	
3. Precious Opal	474	
4. Other Gems	474	
(C) GENERAL.		
<b>§ 15. Numbers Engaged, Wages Paid, and Accidents in Mining</b>		
1. Total Employment in Mining	475	
2. Wages Paid in Mining	475	
3. Accidents in Mining, 1916	476	
<b>§ 16. State Aid to Mining</b>		
1. Introduction	476	
2. New South Wales	476	
3. Victoria	476	
4. Queensland	477	
5. South Australia	477	
6. Western Australia	477	
7. Tasmania	477	
8. Northern Territory	478	
<b>§ 17. Commonwealth Government Control of Industrial Metals</b>		
1. General	478	
2. Lead	478	
3. Zinc	479	
4. Copper	479	
5. Tin	480	
6. Molybdenite, Wolfram and Scheelite	480	
7. Formation of Metal Exchange	480	

## SECTION XIII.—MANUFACTURING INDUSTRIES.

<b>§ 1. General</b>	
1. Industrial Progress	481
2. Defects in Industrial Statistics	482
3. Classification of Manufacturing Industries	482
<b>§ 2. Number of Manufactories</b>	
1. General	483
2. Use of Mechanical Power	485
<b>§ 3. Number Employed in Aust. Factories</b>	
1. Total Number Employed	486

2. Classification of Numbers Employed in Factories in Commonwealth	487
3. Classification of Numbers Employed in each State, according to Class of Industry	488
4. Classification of Numbers Employed according to Nature of Employment	488
5. Classification of Factories according to Number of Hands Employed	489
6. Outworkers	490

§ 4. Sex Distribution in Factories	PAGE	§ 8. Individual Industries	PAGE
1. Employment of Females in Factories	491	1. General	510
2. Distribution of Employees according to Sex	491	2. Tanning Industry	510
3. Rate of Increase for each Sex	493	3. Fellmongering and Wool-scouring	511
4. Ratio of Female Employment in Factories	493	4. Soap and Candle Factories	512
5. Employment of Females in Particular Industries	494	5. Saw Mills, etc.	513
§ 5. Child Labour in Factories		6. Agricultural Implement Factories	514
1. Conditions of Child Labour	495	7. Engineering, Ironworks, and Foundries	515
2. Average Number of Children Employed in Factories	495	8. Railway & Tramway Workshops	516
3. Percentage of Children to Total Persons Employed	496	9. Smelting Works	517
4. Industries Employing Child Labour	496	10. Bacon-curing Factories	517
5. Apprenticeship	497	11. Butter, Cheese, and Condensed Milk Factories	518
§ 6. Amount of Wages Paid and Value of Production		12. Meat and Fish Preserving, Ice and Refrigerating Works	519
1. Introduction	497	13. Biscuit Factories	520
2. Amount of Salaries and Wages Paid	498	14. Jam and Fruit Preserving, Pickles, Sauces, and Vinegar	520
3. Value of Fuel and Light used in Factories	501	15. Confectionery	521
4. Value of Raw Materials used in Factories	502	16. Flour Mills	521
5. Total Value of Output of Manufacturing Industries	503	17. Sugar Mills	522
6. Value of Production of Manufacturing Industries	505	18. Sugar Refineries	523
§ 7. Land, Buildings, Plant and Machinery		19. Breweries	523
1. General	506	20. Distilleries	524
2. Value of Land and Buildings	507	21. Tobacco, Cigars, and Cigarettes	525
3. Value of Plant and Machinery	509	22. Woollen, Cotton, and Tweed Mills	526
		23. Boots and Shoes	527
		24. Clothing (Tailoring and Slop) Factories	528
		25. Dressmaking and Millinery	529
		26. Coach and Wagon Building Works	529
		27. Furniture and Cabinet Making and Billiard Table Making	530
		28. Electric Light and Power Works	530
		29. Gas and Coke Works	530

## SECTION XIV.—WATER CONSERVATION AND IRRIGATION.

§ 1. Artesian Water	§ 2. Irrigation Plants
1. General	1. General
2. New South Wales	2. New South Wales
3. Victoria	3. Victoria
4. Queensland	4. Queensland
5. South Australia	5. South Australia
6. Western Australia	6. Western Australia
7. Northern Territory	7. Murray Waters

## SECTION XV.—COMMERCE.

§ 1. Introductory	§ 3. Regulation of Trade during the War
1. Constitutional Powers of Commonwealth in regard to Commerce	1. Authority for
§ 2. Commonwealth Legislation Affecting Foreign Trade.	2. Luxuries Board
1. Customs Act 1901	3. Commonwealth Board of Trade
2. Customs Tariff Act 1902	
3. Sea Carriage of Goods Act	§ 4. Method of Recording Imports and Exports
4. Secret Commission Act 1905	1. Value of Imports
5. Commerce (Trade Descriptions) Act 1905	2. Value of Exports
6. Aust. Industries Preservation Act 1906	3. Records of Past Years
7. Customs Tariff 1906	4. Vessels (Ships) Imported & Exported
8. Customs Tariff (South African Preference) 1906	5. Ships' Stores
9. Australian Industries Preservation Act 1907	§ 5. Oversea Trade
10. Customs Tariff 1908	1. Total Oversea Trade
11. Customs Tariff Amendment Act 1908	2. Alteration of Trade Year
12. Australian Industries Preservation Act 1909	3. Ratio between Exports and Imports
13. Customs (Interstate Accounts) Act 1910	§ 6. Direction of Trade
14. Australian Industries Preservation Act 1910	1. Country of Shipment and Country of Origin
15. Customs Act 1910	2. Direct Imports according to Country of Shipment
16. Customs Tariff 1910	3. Imports from the United Kingdom
17. Customs Tariff 1911	4. Imports Shipped from Brit. Poss.
18. Interstate Commission Act 1912	5. Principal Imports, the Produce of British Possessions
19. Trading with the Enemy Act 1914	6. Imports from Foreign Countries
20. Customs Act 1914	7. Principal Imports, the Produce of Foreign Countries
21. Income Tax Assessment Act 1915, and Amendment thereto	8. Direction of Exports
22. Customs Tariff Validation Act 1917	9. Exports to the United Kingdom
23. Apple Bounty Act 1918	10. Principal Exports to British Possessions
	11. Exports to Foreign Countries
	12. Principal Exports to Foreign Countries

<b>§ 7. Development of Export Trade to Eastern Countries</b>	<b>PAGE</b>
1. Trade with Eastern Countries	579
<b>§ 8. Trade of Commonwealth since Federation</b>	
1. Classified Summary of Australian Trade	585
<b>§ 9. Movement of Specie and Bullion</b>	
1. Specie and Bullion	587
2. Imports of Bullion and Specie	589
3. Exports of Bullion and Specie	589
<b>§ 10. Effects of Prices on the Values of Exports</b>	
1. Significance of Price in Totals	589
2. Effect of Prices	589
3. Influence of Quantity and Price on Total Increased Value of Exports	590

<b>§ 11. External Trade of Australia and other Countries</b>	<b>PAGE</b>
1. Essentials of Comparisons	592
2. "Special Trade" of various Countries	593
3. External Trade as a Measure of Prosperity	593
<b>§ 12. Trade of the United Kingdom with Australia</b>	
1. Proportion of Trade from U.K.	594
2. Preferential Tariff	600
3. Preferential Tariffs of the British Empire	601
<b>§ 13. Customs Tariff, 1914</b>	603
<b>§ 14. Rates of Duty in Australia and other Countries</b>	616

## SECTION XVI.—SHIPPING.

<b>§ 1. General</b>	
1. Record of Shipping before Federation	618
2. Shipping since Federation	618
3. Difficulties of Comparisons of Total Shipping	618
4. Present System of Record	618
<b>§ 2. Oversea Shipping</b>	
1. Total Oversea Shipping	619
2. Comparison with other Countries	620

<sup>1</sup> Australian produce, except gold, which includes re-exports. <sup>2</sup> Decrease due to prohibition of re-issue.

# CHRONOLOGICAL TABLE.

## CHRONOLOGICAL TABLE OF CHIEF EVENTS SINCE THE ESTABLISHMENT OF SETTLEMENT IN AUSTRALIA.

NOTE.—The Government was centralised in Sydney, New South Wales, up to 1825, when Tasmania (Van Diemen's Land) was made a separate colony. In the Table, the names now borne by the States serve to indicate the localities.

Year.	
1788	N.S.W.—Arrival of "First Fleet" at Botany Bay. Land in vicinity being found unsuitable for settlement, the expedition moved to Sydney Cove (now Port Jackson). Formal possession of Port Jackson taken by Captain Phillip on 26th January. Formal proclamation of colony on 7th February. Population, 1024. Branch settlement established at Norfolk Island. French navigator Lapérouse visited Botany Bay. First cultivation of wheat and barley. First grape vines planted.
1789	N.S.W.—First wheat harvest at Parramatta, near Sydney. Discovery of Hawkesbury River. Outbreak of small-pox amongst aborigines.
1790	N.S.W.—"Second Fleet" reached Port Jackson. Landing of the New South Wales Corps. Severe suffering through lack of provisions. First circumnavigation of Australia by Lieut. Ball.
1791	N.S.W.—1st Exploration Map of Australia published. Arrival of "Third Fleet." Territorial seal brought by King.
1792	N.S.W.—Visit of <i>Philadelphia</i> , first foreign trading vessel. Population, 4203.
1793	N.S.W.—First free immigrants arrived in the <i>Bellona</i> . First Australian church opened at Sydney. Tas.—D'Entrecasteaux discovered the Derwent River.
1794	N.S.W.—Establishment of settlement at Hawkesbury River.
1795	N.S.W.—Erection of the first printing press at Sydney. Descendants of strayed cattle discovered at Cowpastures, Nepean River.
1796	N.S.W.—First Australian theatre opened at Sydney. Coal discovered by fishermen at Newcastle.
1797	N.S.W.—Introduction of merino sheep from Cape of Good Hope.
1798	Tas.—Tasmania proved an island by voyage of Bass and Flinders.
1800	N.S.W.—First export of coal. First Custom House in Australia established at Sydney. Flinders' charts published. First issue of copper coin. Population, 5995.
1801	N.S.W.—First colonial manufacture of blankets and linen.
1802	Vic.—Discovery of Port Phillip by Lieut. Murray. S.A.—Discovery of Spencer's and St. Vincent Gulfs by Flinders. Q'land.—Discovery of Port Curtis and Port Bowen by Flinders.
1803	N.S.W.—First Australian wool taken to England by Capt. Macarthur. Issue of "The Sydney Gazette," first Australian newspaper. Vic.—Attempted colonisation of Port Phillip by Collins. Discovery of Yarra by Grimes. Tas.—First settlement formed at Risdon by Lieut. Bowen.
1804	N.S.W.—Insurrection of convicts at Castle Hill. Vic.—Abandonment of settlement at Port Phillip. Tas.—Foundation of settlement at Hobart by Collins, and at Yorktown by Colonel Paterson.
1805	N.S.W.—First extensive sheep farm established at Camden by Capt. Macarthur. Portion of settlers from Norfolk Island transferred to Tasmania.
1806	N.S.W.—Shortage of provisions. Floods. Tas.—Settlement at Launceston.
1807	N.S.W.—Final shipment of convicts from Norfolk Island. First shipment of merchantable wool (245 lbs.) to England.
1808	N.S.W.—Deposition of Governor Bligh.
1810	N.S.W.—First post-office established at Sydney. First race meeting in Australia at Hyde Park, Sydney. Population, 11,590. Tas.—First Tasmanian newspaper printed.
1813	N.S.W.—Passage across Blue Mountains discovered by Wentworth, Lawson, and Blaxland. Macquarie River discovered by Evans.

- 1814 N.S.W.—Australia, previously known as "New Holland," received present name on recommendation of Flinders. Creation of Civil Courts.
- 1815 N.S.W.—Town of Bathurst founded by Governor Macquarie. First steam engine in Australia erected at Sydney. Lachlan River discovered by Evans. Tas.—Arrival of first immigrant ship with free settlers. First export of wheat to Sydney. Port Davey and Macquarie Harbour discovered by Captain Kelly.
- 1816 N.S.W.—Botanic Garden formed at Sydney.
- 1817 N.S.W.—Oxley's first exploration inland. Discovery of Lakes George and Bathurst and the Goulburn Plains by Meehan and Hume. First bank in Australia opened at Sydney. Tas.—Great prosperity in wool and whaling industries.
- 1818 N.S.W.—Cessation of free immigration. Liverpool Plains, and the Peel, Hastings, and Manning Rivers discovered by Oxley, and Port Essington by Captain King.
- 1819 N.S.W.—First Australian Savings Bank at Sydney opened.
- 1820 N.S.W.—Foundation of Campbelltown. Clyde River discovered by Lieut. Johnson. Tas.—First importation of pure merino sheep.
- 1821 N.S.W.—Foundation of Philosophical (now Royal) Society. Population, 35,610. Tas.—Establishment of penal settlement at Macquarie Harbour. First Circuit Court held at Hobart.
- 1822 N.S.W.—Formation of Agricultural Society of N.S.W.
- 1823 N.S.W.—First Australian Constitution. Discovery of gold at Fish River by Assistant-Surveyor McBrien. Arrival in Sydney of Dr. John Dunmore Lang. Qld.—Brisbane River discovered by Oxley.
- 1824 N.S.W.—Became a Crown Colony. Executive Council formed. Establishment of Supreme Court at Sydney, and introduction of trial by jury. First Australian Enactment (Currency Bill) passed by the Parliament at Sydney. Proclamation of freedom of the press. First land regulations. First manufacture of sugar. Vic.—Hume and Hovell, journeying overland from Sydney, arrived at Corio Bay. Qld.—Penal settlement founded at Moreton Bay (Brisbane). Fort Dundas Settlement formed at Melville Island, N. Terr.
- 1825 Tas.—Proclamation of Independence of Van Diemen's Land (Tasmania) and appointment of a nominated Legislative Council for the new colony.
- 1826 N.S.W.—Illawarra founded by Captain Bishop. Vic.—Settlement at Corinella, Western Port, formed by Captain Wright. W.A.—Military Settlement founded at King George's Sound, Albany, by Major Lockyer.
- 1827 N.S.W.—Colony became self-supporting. Feverish speculation in land and stock Qld.—Darling Downs and the Condamine River discovered by Allan Cunningham. Fort Wellington established at Raffles Bay, N. Terr. Tas.—Copper ore discovered at Macquarie Harbour.
- 1828 N.S.W.—Second Constitution. First Census. Sturt's expedition down Darling River. Cotton first grown in Sydney Botanical Gardens. Gas first used at Sydney. Richmond and Clarence Rivers discovered by Captain Rous. Vic.—Abandonment of settlement at Western Port. Qld.—Cunningham discovered a route from Brisbane to the Darling Downs, and explored Brisbane River to its source. Tas.—First land sales.
- 1829 N.S.W.—Sturt's expedition down Murrumbidgee River. New South Wales Act proclaimed. All English law, so far as circumstances of the Colony allowed, came into force. W.A.—Foundation of settlement at Swan River, under command of Lieut.-Governor Stirling. Perth also founded.
- 1830 N.S.W.—Insurrection of convicts at Bathurst. Sturt, voyaging down Murrumbidgee and Murray Rivers, arrived at Lake Alexandrina. Qld.—Murder of Captain Logan by convicts at Brisbane. Tas.—Trouble with natives. Black line organised to force aborigines into Tasman's Peninsula, but failed. Between 1830 and 1835, however, George Robinson, by friendly suasion, succeeded in gathering the small remnant of aborigines (203) into settlement at Flinders Island.
- 1831 N.S.W.—Crown lands first disposed of by public competition. Mitchell's explorations north of Liverpool Plains. Arrival at Sydney of first steamer, *Sophia Jane*, from England. S.S. *Surprise*, first steamship built in Australia, launched at Sydney. First coal shipped from Australian Agricultural Company's workings at Newcastle, N.S.W. First assisted immigration to N.S.W. S.A.—Adelaide district discovered by Captain Barker. Murder of Barker by aborigines at Lake Alexandrina. Wakefield's first colonisation committee. W.A.—Appointment of Executive and Legislative Council. First newspaper—"Fremantle Observer." Lord Ripon's land regulations in N.S.W., W.A., and Tas.
- 1832 N.S.W.—Savings Bank of N.S.W. established.

- 1833 N.S.W.—First School of Arts established at Sydney.
- 1834 N.S.W.—First settlement at Twofold Bay. Vic.—Settlement formed at Portland Bay by Henty Bros. Qld.—Leichhardt reached Gulf of Carpentaria. S.A.—Formation of the South Australian Association. Imperial Act Colonisation of S.A. W.A.—Severe reprisals against natives at Pinjarrah.
- 1835 N.S.W.—Establishment of depot at Fort Bourke on the Darling River, by Mitchell. Vic.—John Batman arrived at Port Phillip; made treaty with the natives for 600,000 acres of land; claim afterwards disallowed by Imperial Government. John Pascoe Fawkner founded Melbourne.
- 1836 N.S.W.—Mitchell's overland journey from Sydney to Cape Northumberland, Vic., "Squatting" formally recognised. Vic.—Proclamation of Port Phillip district as open for settlement. Captain Lonsdale first Resident Magistrate. S.A.—Settlement founded at Adelaide under Governor Hindmarsh.
- 1837 N.S.W.—Appointment in London of Select Committee on Transportation. Vic.—Melbourne planned and named by Governor Bourke. First Victorian post-office established in Melbourne. First sale of Crown lands in Melbourne. First overlanders from Sydney arrived at Port Phillip. S.A.—Adelaide planned by Captain Light. First newspaper published, and first sale of Crown lands in Adelaide.
- 1838 N.S.W.—Discontinuance of assignment of convicts. Drought and failure of crops. Frenzied speculation. Vic.—First Victorian paper published at Melbourne. Qld.—Settlement of German missionaries at Brisbane. S.A.—"Overlanding" of cattle from Sydney to Adelaide along the Murray route by Hawden and Bonney. Settlement at Port Essington, Northern Territory, formed by Captain Bremer.
- 1839 N.S.W.—Gold found at Vale of Clwydd by Count Strzelecki. Vic.—Appointment of Mr. C. J. La Trobe as Superintendent Port Phillip district. S.A.—Lake Torrens discovered by Eyre. Port Darwin discovered by Captain Stokes. W.A.—Murchison River discovered by Captain Grey.
- 1840 N.S.W.—Abolition of transportation to New South Wales. Land regulations—proceeds of sales to be applied to payment for public works and expenditure on immigration. Foundation of viticultural industry. Monetary crisis. Vic.—Determination of northern boundary. Colonists desire separation. Qld.—Penal settlements broken up and Moreton Bay district thrown open. S.A.—Incorporation of Adelaide. Eyre began his overland journey from Adelaide to King George's Sound. Tas.—Visit of the *Erebus* and *Terror* to Hobart. Dr. Hooker investigated the island flora.
- 1841 N.S.W.—Gold found near Hartley by Rev. W. B. Clarke. Separation of New Zealand. W.A.—Completion of Eyre's overland journey from Adelaide to King George's Sound. Tas.—Renewal of transportation.
- 1842 N.S.W.—Incorporation of Sydney. Vic.—Incorporation of Melbourne. S.A.—Discovery of copper at Kapunda.
- 1843 N.S.W.—First Representative Constitution. First manufacture of tweed. Financial crisis. Qld.—Moreton Bay granted legislative representation. Tas.—Agitation against further introduction of convicts.
- 1844 S.A.—Sturt's last expedition inland. Qld.—Leichhardt's expedition from Condamine River to Port Essington.
- 1845 N.S.W.—Mitchell's explorations on the Barcoo. Qld.—Explorations by Mitchell and Kennedy. S.A.—Discovery of the Burra copper deposits. Sturt discovered Cooper's Creek. W.A.—First steam vessel (*H.M.S. Driver*) visited Fremantle.
- 1846 N.S.W.—Mr. Gladstone proposed to revive transportation. Initiation of meat preserving. Qld.—Foundation of settlement at Port Curtis. S.A.—Proclamation of North Australia. W.A.—Organisation of first mining company. Foundation of New Norcia Mission.
- 1847 N.S.W.—Crown Land Leases Act. Iron smelting commenced near Berrima. Overland mail established between Sydney and Adelaide. Vic.—Melbourne created a City. Qld.—Explorations by Leichhardt, Burnett and Kennedy. W.A.—Issue of regulations for leasing Crown lands. First export of guano.
- 1848 N.S.W.—Attempts to revive transportation. Influx of Chinese. Qld.—Leichhardt's last journey. Kennedy speared by the blacks at York Peninsula. Chinese brought in as shepherds. W.A.—Copper and lead discovered in the Champion Bay district by the Messrs. Gregory.

- 1849 N.S.W.—Indignation of colonists at arrival of convict ship *Hashemy*. Exodus of population to goldfields of California. Vic.—*Randolph* prevented from landing convicts. Qld.—Assignment of convicts per *Hashemy* to squatters on Darling Downs. W.A.—Commencement of transportation to Western Australia.
- 1850 N.S.W.—Final abolition of transportation. First sod of first Australian railway turned at Sydney. University incorporated. Vic.—Gold discovered at Clunes by Hon. W. Campbell. Representative government granted. S.A.—Representative government granted. W.A.—Pearl oysters found by Lieut. Helpman at Saturday Island Shoal. Tas.—Representative government granted. Discovery of coal at the Don and Mersey.
- 1851 N.S.W.—Payable gold discovered by Hargraves at Lewis Ponds and Summerhill Creeks. Telegraph first used. Vic.—Separation of Port Phillip—erected into independent colony under the name of Victoria. Discovery of gold in various localities. "Black Thursday," Feb. 6th, a day of intense heat, when several persons died and a vast amount of damage to property was occasioned by fires. Qld.—Agitation for separation from New South Wales. S.A.—Financial depression. Tas.—Serious exodus of population to goldfields on mainland. W.A.—Proclamation of Legislative Council Act.
- 1852 N.S.W.—Destruction of Gundagai by flood—77 lives lost. Arrival of the *Chusan*, first P. and O. mail steamer from England. S.A.—First steamer ascends the Murray River to the junction with the Darling. Tas.—Meeting of first elective Council protests against transportation. Payable gold discovered at The Nook, near Fingal, and at Nine Mile Springs.
- 1853 Vic.—University established. Tas.—Abolition of transportation.
- 1854 N.S.W.—Russian war-scare and volunteer movement. Vic.—Opening of first Australian railway—Flinders Street to Port Melbourne. Riots on Ballarat goldfields. Storming of the Eureka Stockade, Dec. 3rd.
- 1855 N.S.W.—Opening of railway—Sydney to Parramatta. Introduction of responsible Government. Mint opened. Vic.—Proclamation of Constitution. Qld.—Gregory's expedition in search of Leichhardt. Tas.—Responsible government introduced.
- 1856 N.S.W.—First elective Parliament. Pitcairn Islanders placed on Norfolk Island, which was placed under jurisdiction of Governor of New South Wales. Vic.—First Parliament under responsible government. S.A.—Responsible government introduced. Tas.—First Parliament under responsible government. W.A.—A. C. Gregory's expedition in search of Leichhardt.
- 1857 N.S.W.—Heavy floods. Wreck of the *Dunbar* (119 lives lost), and *Catherine Adamson* (21 lives lost), at Sydney Heads. Select Committee on Federation. Vic.—Manhood suffrage established. S.A.—First Parliament under responsible government. Exploration by Babbage and Warburton. Passage of Torrens' Real Property Act.
- 1858 N.S.W.—Establishment of manhood suffrage and vote by ballot. Telegraphic communication between Sydney, Melbourne and Adelaide. S.A.—Stuart's explorations. Qld.—The Canoona gold rush.
- 1859 Qld.—Proclamation of Queensland as separate colony. Tas.—First submarine cable, via Circular Head and King Island, to Cape Otway.
- 1860 N.S.W.—Disastrous floods on the Shoalhaven and at Araluen. Vic.—Burke and Wills left Melbourne on their journey across Continent. Qld.—First Parliament under responsible government. S.A.—Copper discoveries at Wallaroo and Moonta.
- 1861 N.S.W.—Anti-Chinese riots at Lambing Flat and Burrangong goldfields. Opening of first tramway in Sydney. Robertson's Land Acts. Messrs. Parkes and Dalley proceeded to London as emigration lecturers. Regulation of Chinese immigration. Vic.—Conference of Statisticians, Melbourne. Burke and Wills perished at Cooper's Creek, near Innamincka, S.A. W.A.—Exploration of F. Gregory in the North-west.
- 1862 N.S.W.—Raid by bushrangers on the Lachlan gold escort (£14,000 taken). Abolition of State aid to religion. Real Property Act. Vic.—C. Gavan Duffy's Land Act. Qld.—McKinlay's explorations. Heavy floods on Fitzroy River. S.A.—Stuart crossed the Continent from south to north. W.A.—Severe floods—damage to property, £30,000. First export of pearl-shell.
- 1863 N.S.W.—Bathurst and Canowindra "held up" by bushranger Gilbert. Vic.—Inter-colonial conference at Melbourne. S.A.—Northern Territory taken over. W.A.—Initiation of settlement in the North-west district. Establishment of Post Office (now Government) Savings Bank.

- 1864 N.S.W.—Frequent outrages by bushrangers. Qld.—First railway begun and opened. First sugar made from Queensland cane. W.A.—Messrs. Panton, Harding and Goldwyer murdered by natives. Tas.—First successful shipment of English salmon ova.
- 1865 N.S.W.—Destruction by fire of St. Mary's Cathedral, Sydney.
- 1866 N.S.W.—Passage of Public Schools Act of (Sir) Henry Parkes. Vic.—Political deadlock. Qld.—Financial crisis. S.A.—Introduction of camels for exploration, etc.
- 1867 Vic.—Imposition of protective tariff. Qld.—Discovery of gold at Gympie.
- 1868 N.S.W.—Attempted assassination of the Duke of Edinburgh at Clontarf, near Sydney. Qld.—Passage of Act to regulate island labour traffic. W.A.—Arrival of the *Hougomont*, last convict ship. Tas.—First sod of first railway (Launceston and Western) turned by Duke of Edinburgh.
- 1869 N.S.W.—Establishment of Eskbank Iron Company. Vic.—Reduction of property qualification for members and electors of Legislative Council. W.A.—First telegraph line opened from Perth to Fremantle. Tas.—Second cable opened.
- 1870 N.S.W.—Intercolonial Exhibition opened at Sydney. Imperial troops withdrawn. Vic.—Intercolonial Congress at Melbourne. S.A.—Commencement of transcontinental telegraph. W.A.—Meeting of first Legislative Council under responsible government.
- 1871 N.S.W.—Permanent military force raised. Vic.—Increase of protective duties. W.A.—Passage of Elementary Education Act. Forrest's explorations. Tas.—Discovery of tin at Mount Bischoff. Launceston-Western railway opened for traffic.
- 1872 N.S.W.—International Exhibition at Sydney. Death of W. C. Wentworth. Vic.—Mint opened. Qld.—Discovery of tin at Stanthorpe, copper at Mt. Perry, coal at Wide Bay, gold at the Palmer. S.A.—Cable from Java to Port Darwin. Completion of transcontinental telegraph line. W.A.—Cyclonic storms—destruction of town of Roebourne. Tas.—Completion of direct telegraphic communication with England.
- 1873 N.S.W.—Intercolonial Conference at Sydney. First volunteer encampment. Inauguration of mail service with San Francisco. W.A.—Warburton crossed from transcontinental telegraph line to head of De Grey River.
- 1874 N.S.W.—Triennial Parliaments Act passed. Intercolonial Conference. Qld.—Dalrymple's discoveries on north-eastern seaboard. S.A.—Adelaide University founded. W.A.—Explorations by E. Giles. John and Alexander Forrest arrived at Overland Telegraph from Murchison.
- 1875 Qld.—Transfer of Port Albany Settlement to Thursday Island. S.A.—Wreck of the *Gothenburg*—Judge Wearing and other well-known Adelaide citizens drowned. Education Act passed. Explorations by Giles, Gosse, and Warburton. Tas.—Conference of Statisticians, Hobart.
- 1876 N.S.W.—Completion of cable—Sydney (La Prouse) to Wellington (Wakapuaka). Vic.—Members of Legislative Assembly increased to 86. W.A.—Violent gale at Exmouth Gulf, number of pearling vessels wrecked, 69 lives lost. Giles crosses colony from east to west. Tas.—Death of Truganini, last representative of Tasmanian aborigines.
- 1877 Vic.—Deadlock on question of payment to members. W.A.—Opening of telegraphic communication with South Australia. Tas.—Discovery of rich gold-bearing quartz reef at Beaconsfield.
- 1878 N.S.W.—Seamen's strike. Vic.—Visit to England of Victorian delegation re alteration of Victorian Constitution. "Black Wednesday"—wholesale dismissal of civil servants. Qld.—Restriction of Chinese immigration.
- 1879 N.S.W.—First artesian bore at Killara. International Exhibition at Garden Palace, Sydney. First steam tramway. First issue of silver coin from Mint. W.A.—Celebration of 50th anniversary of foundation of colony. A. Forrest's explorations in the Kimberley district, and discovery of the Fitzroy pastoral country.
- 1880 N.S.W.—Public Instruction Act passed. Sydney streets partially wood-paved. Vic.—Opening of first Victorian International Exhibition at Melbourne. Federal Conference, at Melbourne and Sydney.
- 1881 N.S.W.—Further restrictions on Chinese immigration. Vic.—Reduction of property qualification for members and electors of Legislative Council, number of members increased to 42. W.A.—Cyclone near Roebourne wrecked number of pearling vessels. On the Ashburton, 1000 sheep destroyed by cyclone. First simultaneous Australian Census, population 2,250,194. Visit to Australia of T.R.H. Prince Albert Victor and Prince George of Wales.

- 1882 N.S.W.—Garden Palace destroyed by fire. W.A.—Nugget of gold found between Roebourne and Cossack.
- 1883 N.S.W.—Discovery of silver at Broken Hill. Completion of railway between New South Wales and Victoria. Qld.—Annexation of New Guinea—repudiated by Imperial authorities.  
Federal Conference held at Sydney. Federal Council created.
- 1884 N.S.W.—Land legislation restricting sales by auction. Vic.—Appointment of First Public Service Board. W.A.—Stockdale's explorations.  
Federation Bill passed in Victoria and rejected in New South Wales. British protectorate declared over New Guinea.
- 1885 N.S.W.—Military contingent sent to the Soudan. Opening of the Broken Hill Proprietary Silver Mines. Qld.—Agitation for division of the colony. W.A.—Gold found by prospectors on the Margaret and Ord Rivers in the Kimberley district. Tas.—Silver-lead discovered at Mount Zeehan.
- 1886 N.S.W.—Industrial depression. Wreck of the *Ly-ee-Moon*, *Coringamite*, and *Helen Nicol*. S.A.—Celebration of jubilee of foundation of colony. W.A.—Proclamation of Kimberley goldfields. Tas.—Discovery of gold and copper at Mount Lyell.  
First session of Federal Council met at Hobart on the 26th January.
- 1887 N.S.W.—Disaster at Bulli coal mine (81 lives lost). Peat's Ferry (Hawkesbury River) railway accident. S.A.—International Exhibition at Adelaide. W.A.—Cyclone destroyed nearly the whole pearling fleet off the Ninety-Mile Beach—200 lives lost. Gold discovered at Yilgarn and Southern Cross. Australasian Conference in London. Australasian Naval Defence Force Act passed.
- 1888 N.S.W.—Destructive bush fires. Centennial celebrations. Restrictive legislation against Chinese, imposing poll-tax of £100. Strike of coal-miners at Newcastle. Vic.—Second Victorian International Exhibition held at Melbourne. Members of Legislative Council increased to 48, and of Assembly to 95. Qld.—Railway communication opened between Sydney and Brisbane. W.A.—Favenc's explorations.  
Centenary of first settlement in Australia. Conference of Australian Ministers at Sydney to consider question of Chinese immigration. First meeting of the Australasian Association for the Advancement of Science held in Sydney. Imperial Defence Act passed.
- 1889 N.S.W.—Destructive floods, Hunter River. Qld.—Direct railway communication established between Brisbane and Adelaide. W.A.—Framing of new Constitution. Tas.—University founded.
- 1890 N.S.W.—Strike at Broken Hill. Maritime and shearers' strikes. Payment of members of Parliament. Destructive bush fires. Qld.—Wreck of the *Quetta*—146 lives lost. Floods and hurricanes. Industrial depression. W.A.—Responsible government granted.  
Meeting at Melbourne of Australasian Federation Conference. Pre-censal Conference of Statisticians at Hobart.
- 1891 N.S.W.—Election to Legislative Assembly of 35 Labour members. Arrival of Australian Auxiliary Squadron. Collapse of several building societies. Cessation of assisted immigration. W.A.—Discovery of gold on the Murchison. Federal Convention in Sydney, draft bill framed and adopted. Second simultaneous Australian census. Population, 3,174,392.
- 1892 N.S.W.—Broken Hill miners' strike. Run on Government Savings Bank. Women's College, Sydney University opened. Vic.—Suspension of Railway Commissioners. W.A.—Discovery of gold by Messrs. Bayley and Ford at Coolgardie.
- 1893 N.S.W.—Departure by the *Royal Tar* of colonists for "New Australia." Electoral Act—"One man one vote." Financial crisis, chiefly affecting the eastern States. Qld.—Brisbane floods.
- 1894 N.S.W.—Shearers' strike. S.A.—Adult Suffrage Bill assented to. Industrial depression.
- 1895 N.S.W.—Crown Lands Act of 1895. Free-trade tariff. Land and income taxes introduced.  
Conference of Premiers at Hobart *re* Federation.
- 1896 N.S.W.—People's Federal Convention at Bathurst. S.A.—Departure of Calvert expedition.
- 1897 S.A.—Floods and storms at Adelaide. Death of Sir Thomas Elder. Earthquake and hurricane in Northern Territory. Town of Palmerston destroyed.
- 1897-8 Sessions of Federal Convention at Adelaide, Sydney and Melbourne.

- 1898 N.S.W.—First surplus of wheat for export.  
Draft Federal Constitution Bill submitted to electors in Victoria, New South Wales, South Australia, and Tasmania. Requisite statutory number of votes not obtained in New South Wales.
- 1899.—First contingent of Australian troops sent to South Africa. Conference of Premiers in Melbourne to consider amendments to Federal Constitution Bill. Referendum—Bill accepted by New South Wales, Victoria, Queensland, South Australia, and Tasmania.
- 1900 N.S.W.—Old-age pensions instituted. W.A.—Agitation for separation by gold-fields. Strike of railway engine drivers and firemen.  
Contingents of naval troops sent to China.  
Commonwealth Constitution Act received Royal Assent, 9th July. Mr. (afterwards Sir) Edmund Barton formed first Federal Ministry.
- 1901 Vic.—Old-age Pensions instituted.  
Proclamation of the Commonwealth at Sydney. First Federal Parliament opened at Melbourne by the Duke of Cornwall and York. Simultaneous Australasian Census—population of the Commonwealth, 3,773,801. Interstate freetrade established.
- 1902 N.S.W.—Disastrous explosion at Mount Kembla Colliery—95 lives lost. Women's franchise granted. Jubilee of Sydney University. S.A.—Reduction of number of members of both Houses of Parliament. W.A.—Opening of pumping station at Northam in connection with Goldfields water supply.  
First Federal Tariff.
- 1903 Vic.—Railway Strike (Enginemen). W.A.—Coolgardie and Kalgoorlie water supply scheme completed.  
Inauguration of the Federal High Court. Conference of Statisticians in Melbourne.
- 1904 N.S.W.—Reduction of members of Legislative Assembly from 125 to 90.
- 1905 N.S.W.—Re-introduction of assisted immigration.
- 1906 Wireless telegraphy installed between Queenscliff, Vic., and Devonport, Tas. Conference of Statisticians of Australian States and New Zealand. Papua taken over by Commonwealth.
- 1907 N.S.W.—Strike of coal-miners. Vic.—Bakers' strike, Melbourne. Telephone, Sydney to Melbourne, opened.  
Imperial Conference in London. Introduction of new tariff in Federal Parliament. Preference to United Kingdom. Allowance to Federal members of Parliament increased from £400 to £600.
- 1908 N.S.W.—Tramway employees' strike, Sydney. Vic.—Railway accident at Braybrook Junction (Sunshine)—44 killed, 412 injured; compensation paid, £126,000.  
Yass-Canberra chosen as site of Federal Capital. Interstate Premiers' Conference at Melbourne. Visit of American Fleet to Australia.
- 1909 N.S.W.—Miners' strikes at Broken Hill and Newcastle. Qld.—University established. S.A.—*Clan Ranald* foundered in St. Vincent's Gulf—40 drowned. W.A.—Cyclone at Broome.  
Imperial Defence Conference in London—Commonwealth ordered two destroyers and one first-class cruiser for fleet unit. Visit of Lord Kitchener to report and advise on Commonwealth military defence. Loss of the *Waratah* with 300 passengers and crew.
- 1910 Vic.—Railway accident at Richmond—9 killed, over 400 injured; compensation paid £129,000. S.A.—Strike of transport workers at Adelaide. W.A.—Cyclone at Broome—several pearling vessels wrecked, 3 whites and many coloured fishermen drowned. Strike of tramway employees at Perth. Wreck of the *Pericles* off Cape Leeuwin.  
Rt. Hon. Sir G. H. Reid appointed High Commissioner for the Commonwealth in London. Referendum on financial relations between the Commonwealth and the States. Proclamation taking over Yass-Canberra (in New South Wales) as site for Federal Capital. Penny postage. Visit of Scottish Agricultural Commission. Dutch squadron visited Australia. Arrival of the *Yarra* and *Parramatta*, first vessels of Australian navy. Australian Notes Act passed and first Commonwealth notes issued. Admiral Sir R. Henderson visited Australia to advise on naval defence.

- 1911 First Federal Census—population of the Commonwealth, 4,455,005. Transfer of Northern Territory to Commonwealth. Federal referenda relating to Monopolies and Industrial Legislation—proposals rejected. Introduction of compulsory military training. Launch of Commonwealth destroyer *Warrego* at Sydney. Establishment of penny postage to all parts of British Empire. Western Australian University founded.
- 1912 Commonwealth Bank opened. First payments of Maternity Bonus. First sod turned at Port Augusta of Trans-Australian Railway (Port Augusta to Kalgoorlie). Administrators to Northern and Federal Territories appointed. Gift of £1,000,000 to charities by Mrs. Walter Hall, Sydney, N.S.W. Numerous industrial disturbances.
- 1913 Arrival of battle cruiser *Australia*, and cruisers *Melbourne* and *Sydney*. Foundation stone of Commonwealth Building in London laid by the King. Federal Capital named Canberra and foundation stone laid. Appointment of Interstate Commission. Visit of Empire Trade Commission. Visit of Members of Empire Parliamentary Association.
- 1914 Visit of General Sir Ian Hamilton to report on military defence scheme. Double dissolution of Federal Parliament. Visit of British Association for the Advancement of Science. Serious drought affecting almost the whole of the C'wealth. S.A.—Increase of numbers of members of both Houses of Parliament.
- European War. Australian Navy transferred to Imperial Navy. Captured vessels added to Australian fleet. Submarine AE1 lost at sea whilst in service in the vicinity of New Britain. German Pacific possessions seized by Australian expeditionary force (military and naval). Australian troops offered to, and accepted by Imperial Government. By 31st December, 31,000 volunteers of all ranks had left Australia for service overseas. Portion of Australian army was also mobilised and kept under arms till the destruction of the German Pacific fleet. German Cruiser *Emden* destroyed at North Cocos Island by H.M.A.S. *Sydney*.
- 1915 Opening of Broken Hill Proprietary's Ironworks at Newcastle, N.S.W. Mr. Fisher appointed High Commissioner for the Commonwealth. Referendum for purpose of giving increased powers to the Commonwealth abandoned. Navy Department created. Formation of Australian Wheat Board.
- Australian troops landed at Dardanelles on April 25th. Loss of Submarine AE2 in operations at the Dardanelles. Census taken of Wealth and Income, and of Males in Australia between ages of 17 and 60. Subscriptions to Commonwealth War Loan, £13,000,000. Australian troops withdrawn from Gallipoli on December 19th. At end of year about 250,000 troops had been despatched from Australia or were in training.
- 1916 Record wheat harvest (180,000,000 bushels). Special recruiting campaign instituted. Australian troops transferred to France. Up to June, 262,000 troops had left Australia or were in training. Acquisition of steamships by the Commonwealth. First Military Service Referendum. Strike of coal miners at Newcastle. Moratorium Regulations passed.
- 1917 National Ministry formed. Commonwealth elections. General strike. Kalgoorlie-Port Augusta railway completed. Up to October, 313,000 troops had left the Commonwealth or were in training. Second Military Service Referendum. Daylight Saving introduced and abandoned.

# OFFICIAL YEAR BOOK

OF THE

## COMMONWEALTH OF AUSTRALIA, 1917,

AND EARLIER YEARS.

---

### SECTION I.

#### STATISTICAL ORGANISATION AND SOURCES OF INFORMATION.

##### § 1. Introduction.

1. **Development of Australian Statistics.**—In the first issue of the Commonwealth Official Year Book (No. 1, 1901-1907), an account was given of the origin and development of Australian Statistics; *vide* pp. 1 to 16 therein. Owing to considerations of space, however, this matter was considerably curtailed in succeeding Year Books, and appears in No. 4 on pp. 1 to 4. In the following issues, a still further curtailment has been made in order to make room for new matter.

Briefly, it may be stated that to the "Blue Books" compiled in Australia for the Imperial authorities, there succeeded, under Responsible Government, the statistics which each of the departments prepared for itself. State statistical departments were organised later, principally as collecting agencies of official and general information.

Owing to absence of co-ordination in collection and compilation, due to the organisation, independently, of the various States bureaux, there were difficulties in so combining State statistics as to get a satisfactory statistic for Australia as a whole, and various conferences of State Statisticians did not completely rectify the divergencies that had arisen.

(i.) *Creation of the Commonwealth Bureau of Census and Statistics.* Constitutionally, matters relating to "Census and Statistics" belong to the Commonwealth, and in 1906, under the authority of the Census and Statistics Act of 1905, providing for the taking of the Census and the collecting of general statistics, the Commonwealth Bureau of Census and Statistics was created. A conference of statistical representatives of Australian States and New Zealand, under the presidency of the Commonwealth Statistician, met in November and December, 1906. For a more or less complete presentation of the affairs of the Commonwealth and of its constituent parts, various desiderata were recognised, and a series of resolutions adopted by the conference. Identity of categories, simultaneity and identity in methods of collection, and uniformity in compilation, were the main features desired. A resumé of the resolutions of this conference is given in Year Book No. 1, pp. 12-16.

(ii.) *Organisation of the Commonwealth Bureau of Census and Statistics.* In the organisation of the Bureau, while all classes of work may at any time be relegated to any officer, certain fields of activity are attended to mainly by the officers mentioned

hereunder, who, subject to the general direction of the Statistician, supervise the work of the different branches:—

JOHN STONHAM, M.A. (Sydney). Chief Compiler; and general administration.

CHARLES HENRY WICKENS, A.I.A. Supervisor of Census.

HENRY SPONDLY (Zurich University). Vital Statistics and cognate matters.

EDWARD TANNOCH MCPHEE. Trade and Customs Statistics and Commerce.

GERALD LIGHTFOOT, M.A. (Cambridge), Barrister at Law. Industrial and Social Statistics.

FREDERICK DALGLISH ROSSITER, M.A. (Melbourne). Defence; general control of Library, etc.

FREDERICK WILLIAM BARFORD, M.A. (Oxford), A.I.A. Financial Statistics.

**2. Sources of Information.**—Statistical information is furnished (i.) by the State Statistical Bureaux, as a result of direct demand, or through the police and special collectors; (ii.) by Commonwealth and State Departments (see lists of publications in § 2 *infra*); (iii.) in respect of returns of Trade, Customs and Excise, by the Trade and Customs Department; (iv.) by scientific and technical experts, specially requisitioned to write on particular subjects; (v.) by State Statisticians, as officers duly constituted under the Commonwealth Census and Statistics Act; (vi.) and by information supplied compulsorily, on the Commonwealth Statistician's demand.

**3. Maintenance of Secrecy.**—Under no circumstance can information supplied to a statistical office be used against the individual supplying it. All statistical enquiries are strictly impersonal, and the affairs of individuals or individual businesses are never disclosed. No other Government Department can make use of the Statistical Departments in order to acquire detailed information otherwise unavailable.

**4. Accuracy Essential.**—The importance of accurate statistical information is emphasised. The making of untrue statements is heavily penalised.

## § 2. Statistical Publications of Australia.

**1. Introductory.**—The official statistical publications of Australia may be divided bibliographically into two main divisions, viz.:—(1) Commonwealth publications dealing both individually and collectively with the several States of the Commonwealth, and (2) State publications dealing with individual States only. Besides these there are many other reports, etc., issued regularly, which, though not wholly statistical, necessarily contain a considerable amount of statistical information. The principal of these published to August 1918, are included in the lists given hereunder.

**2. Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, viz.:—(i.) Publications issued by the Commonwealth Statistician, and (ii.) Parliamentary and Departmental Reports and Papers.

(i.) *Publications issued by the Commonwealth Statistician.* The following is a list of statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration up to August 1918. The Demography, Finance, Production, and Transport and Communication Bulletins cover statistics from 1901. The Year Book contains figures from earlier years.

*Australian Life Tables, 1901-1910. Australian Joint Life Tables, 1901-1910.*

*Census Bulletins.*—No. 1.—Population of States and Territories; No. 2—Persons of Non-European Race; No. 3—Ages; No. 4—Population of Counties, Local Government Areas, etc.; No. 5—Population of Electoral Divisions, Provinces, and Districts; No. 6—Birthplaces; No. 7—Length of Residence in Australia; No. 8—Religions; No. 9—Education; No. 10—Blindness and Deafmutism; No. 11—Schooling; No. 12—Conjugal Condition; No. 13—Localities; No. 14—Mortality Investigation; No. 15—Families; No. 16—Occupations; No. 17—Occupied Dwellings.

*Census Results.* Vol. I., Report. Vol. II. (parts 1-8). Vol. III. (parts 9-14). Part 1—Ages; part 2—Birthplaces; part 3—Residence; part 4—Education; part 5—Schooling; part 6—Religions; part 7—Infirmities; part 8—Aliens; part 9—Conjugal; part 10—Families; part 11—Life Tables; part 12—Occupations; part 13—Dwellings; part 14—Summary.

*Finance*—Bulletins, annually, 1907 to 1915-16. (Hereafter to be published biennially).

*Inquiry into the Cost of Living in Australia*, 1910-11.

*Labour and Industrial Statistics*—Explanatory Memorandum on the Proposed Scheme. Report No. 1—Prices, Price-Indexes and Cost of Living in Australia. No. 2—Trade Unionism, Unemployment, Wages, Prices, and Cost of Living in Australia, 1891 to 1912. No. 3—Manufacturing Industries in the Commonwealth, 1912. No. 4—Expenditure on Living in the Commonwealth, November, 1913. *Annual Reports*—Prices, Purchasing Power of Money, Wages, Trade Unions, Unemployment, and General Industrial Conditions: No. 5—1913-14; No. 6—1915; No. 7—1916; No. 8—1917.

*Labour Bulletins*—Quarterly, March 1913 to June 1917.\*

*Monthly Summary of Australian Statistics*—Bulletins Nos. 1 to 69, from January 1912 to September 1917\* (replacing the publication "Trade, Shipping, and Oversea Migration.")

*Official Year Book of the Commonwealth of Australia*—Annually, 1907 to present issue (1918).

*Pocket Compendium of Australian Statistics*, 1913, 1914, 1916 and 1918.†

*Population and Vital Statistics Bulletins*—Determination of the Population of Australia, 1901 to 1906. Commonwealth Demography, annually, 1906 to 1910. Vital Statistics, annually, 1907 to 1910. Commonwealth Demography (comprising matter previously included in two last-named Bulletins), annually, 1911 to 1917. Vital Statistics, quarterly, 1907 to June 1911.\* The Nomenclature of Diseases and of Causes of Death, 1907. New Edition, 1910.

*Production*—Bulletins, annually, 1906 to 1916-7.

*Professional Papers.*—No. 1—The Classification of Diseases and Causes of Death, from the standpoint of the Statistician; Nos. 2 and 3—On the Influence of Infantile Mortality on Birthrate (2 papers); No. 4—On the Statistical Opportunities of the Medical Profession; No. 5—Tuberculosis Duration Frequency Curves, and the number of existing cases ultimately fatal; No. 6—The Problems of Statistics; No. 7—The Evolution and Significance of the Census; No. 8—Census Taking‡; No. 9—Studies in Statistical Representation—On the nature of the curve  $y = Ax^m e^{nx^p}$ ; No. 10—Studies in Statistical Representation—Statistical Application of the Fourier series; No. 11—Suicide in Australia; No. 12—An Extension of the Principle Underlying Woolhouse's Method of Graduation‡; No. 13—The First Commonwealth Census; No. 14—Mathematical Analysis of Climatological Physiology; No. 15—The International Nosological Classification, etc.; No. 16—Secular Progress of Pulmonary Tuberculosis and Cancer, etc.; No. 17—The Improvement in Infantile Mortality, etc.; No. 18—Secular and Annual Fluctuations of Deaths from Several Diseases, etc.; No. 19—Investigations Concerning a Law of Infant Mortality‡; No. 20—Labour and Industrial Statistics§; No. 21—A Study in Proportional Representation||; No. 22—Studies in Statistical Representation, III.—Curves, their Logarithmic Homologues and Antilogarithmic Generatrices.¶

\* Discontinued. Information now included in *Quarterly Summary of Australian Statistics*.  
† Published under the title of Commonwealth Statistical Digest, 1916.

‡ By C. H. Wickens, A.I.A. § By Gerald Lightfoot, M.A. || By F. W. Barford, M.A., A.I.A.  
¶ By G. H. Knibbs, C.M.G., F.S.S., F.R.A.S., and F. W. Barford, M.A., A.I.A.

- Quarterly Summary of Australian Statistics*—Bulletin No. 70, December, 1917 (replacing *Monthly Summary of Australian Statistics*).
- Railway Statistics*—Report on the Desirability of Improved Statistics of Government Railways in Australia, February, 1909.
- Shipping*—Shipping and Oversea Migration, annually, 1906 to 1915-16. (Discontinued.)
- Social Insurance*—Report to the Hon. the Minister of Trade and Customs.
- Social Statistics*.—Bulletins, annually, 1907 to 1915. (Hereafter to be published biennially.)
- Superannuation for the Commonwealth Public Service*—Report to the Hon. the Minister of Home Affairs.
- The Australian Commonwealth: Its Resources and Production*—Annually, 1908 to 1915.
- Trade and Customs*—Trade, and Customs and Excise Revenue, annually, 1906 to 1916-17.
- Trade, Shipping, and Oversea Migration—Monthly, January 1907 to December 1911.\*
- Transport and Communication*—Bulletins, annually, 1906 to 1916. (Hereafter to be published biennially.)
- Wealth*—The Private Wealth of Australia and its Growth, as ascertained by various methods, together with a Report of the War Census in 1915.

(ii.) *Commonwealth Parliamentary and Departmental Reports and Papers*. The following are the principal official reports and papers containing statistical matter which have been issued since the inauguration of the Commonwealth:—

- Advertising: Various publications issued by Department for External Affairs.
- Arbitration: Returns of Awards, Conferences, Agreements, etc., of Arbitration Court.
- Bank: Balance Sheets of Commonwealth Bank, and Reports of Auditor-General.
- Bounties: Returns relating to payments.
- Defence—Commonwealth Military Journal, issued quarterly, since April 1911; Forces Lists: Military, Naval, Cadets; Staff and Gradation Lists, Australian Imperial Force; Manual of War Precautions, various editions; Memorandum by Admiral Sir Reginald Henderson on the Naval Defence of Australia; Memorandum on Australian Military Defence and its progress since Federation; Memorandum on the Defence of Australia, by Field-Marshal Lord Kitchener; Military and Naval Orders; Records of Australian Contingents to the War in South Africa, 1899-1902; Relative Strength of Navies in the Pacific; Report to Admiralty on H.M. Australian Fleet (extracts); Reports on Camps, Canteens at Camps, Courts of Enquiry, Small Arms Factory, Royal Military College, Rifle Clubs, Musketry, Universal Training, Cadets, Physical Training, Army Medical Corps, Organisation and Distribution, Troopships, Naval Bases, Dockyards, Recruiting, Administration, Repatriation, Mobilisation, Finance, etc.; Report of Director of Naval Forces for 1906; Reports of the Military Board, 1905 and 1906; Report on an Inspection of the Military Forces of the Commonwealth by General Sir Ian Hamilton; Synopsis of Report on the Business Branches of the Department by Mr. R. McC. Anderson; *Proposals for the Home Defence of Australia*; Tables of War and Peace Organisation and Establishments: Tables of Establishments, Australian Imperial Force.

---

\* Discontinued. Information since included in *Monthly Summary of Australian Statistics* to September 1917; thereafter in *Quarterly Summary of Australian Statistics*.

Electoral—Report of Royal Commission on the Commonwealth Electoral Law and Administration; Returns under Representation Act 1905; Commissioners' Special Reports; Statistics of Commonwealth Elections and Referenda; Statement by Commonwealth Statistician *re* Inflation of Electoral Rolls.

Factories—Reports on Clothing, Cordite, Small Arms, and Harness and Leather Factories.

Federal Capital: Papers and Designs. Reports on Administration.

Fisheries: Reports of the Director on Fishing Experiments carried out by the F.I.S. "Endeavour"; Reports on Pearling Industry; Zoological and Biological Results of Fishing Experiments; Life and Work of H. C. Dannevig.

Fruit Industry: Report of Royal Commission.

High Commissioner of the Commonwealth: Reports, Annual, 1910 to 1914. Reports on Australian Butter Market in England. Visit to Canada and United States.

Historical Records of Australia. Series I., vols. I.—XI.

Home Affairs: Schedule of the Department—Nos. 1 to 23. Bi-monthly Digest; Report on the Business Branches of the Department by Mr. R. McC. Anderson.

Immigrants and Immigration Restriction. Annual returns from 1902.

Industry and Manufactures—Annual Return of Bounties Paid under Manufactures Encouragement Act; Sugar Statistics, from 1901-2, *re* White and Black Labour, Production, Duties, Excise, Bounties, etc.; Report of Royal Commission on Sugar Industry; Reports on Industries (Wool, Apples, Wheat, etc.); Reports and Recommendations of Royal Commission on Pearl Shelling Industry.

Interstate Commission. Reports, Annual from 1914-15 to 1917-18, and special. Invalid and Old-Age Pensions: Statements and Reports.

Land Tax Assessment Act: Annual Reports of Commissioner, from 1910-11.

Lands and Surveys: Report of Conference of Commonwealth Director and States Surveyors-General.

Lighthouses: Reports of Inspections, etc.

Medical—Reports of Institute of Tropical Medicine; Reports on Tropical Diseases; Reports on Death and Invalidity; Report on Secret Remedies; Quarantine Reports.

Meteorologist—Bulletins of Climate and Meteorology of Australia; Rainfall Maps of Australia; Professional Papers and Charts (various); Monthly Meteorological Reports, from January, 1910.

Naturalisation: Returns under Naturalisation Act of 1903.

New Guinea (late German): Statistics.

Norfolk Island: Report of Administration, 1915-16.

Northern Territory—Report of the Government Resident for 1910; Annual Reports of Administrator from 1911; Bulletins Nos. 1 to 17; Miscellaneous Reports.

Papua—Annual Reports from 1910-11; Handbooks, from 1904-5; Miscellaneous Reports.

Parliamentary Papers (miscellaneous). Reports of Committees, Commissions, Conferences, etc.

Patents and Trade Marks Statistics, 1904 to date.

Postal: Report of Postal Services Royal Commission.

Postmaster-General's Department—Statement of Business transacted and details of Receipts and Expenditure, 1907, 1908 and 1909; Annual Reports of Postmaster-General's Department from 1910; Report on the Business Management of Postmaster-General's Department, by Mr. Robert McC. Anderson.

Privy Council: Reports of Judgments.

Public Service Commissioner—Report, 1901-4; and Annual Reports from 1905; and Public Service Lists, annual, from 1903.

Public Works: Reports of Parliamentary Standing Committee.

Railways: Reports, various, *re* Gauges of Australian Railways, Unification of Gauges, Strategic Railways, etc.; Staff Lists; Reports of Engineer-in-Chief; Statements regarding Cost of Construction, Revenue, and Expenditure of Trans-Australian Railway.

Science and Industry. Memo. on the Organisation of Scientific Research Institutions in U.S.A., by Mr. G. Lightfoot, M.A.; Report of the Executive Council; Recent Developments in the Organisation of National Industrial Research Institutions; Bulletins, Nos. 1 to 6.

Shipping—Commonwealth Line of Steamships, Return of Voyages, etc.; Merchant Tonnage and the Submarine.

Social Insurance: Report by the Hon. Sir John Cockburn on the Hague Conference of 1910.

Tariff—Tariff Guide, annual from 1903; also Customs and Tariff Schedules; Reports on Tariff Investigation; Tariff Decisions; Customs Orders.

Trade and Customs—Report of Royal Commission on Meat Export Trade; Trade and Customs Returns, 1903 to 1905 (by Government Statistician of New South Wales); Report of Royal Commission on Tasmanian Customs Leakage.

Treasury—Correspondence relating to the Gold Reserve in respect to the issue of Australian Notes; Budget, annual from 1901-2; Estimates, annual, from 1901-2; also Supplementary Estimates; Treasurer's Statements and Reports of Auditor-General, annual from 1901-2; Treasury Notes issued to the various Banks of the Commonwealth; Treasury Statements of Receipts and Expenditure (issued quarterly in the *Commonwealth Gazette*); Statements and Reports regarding Maternity Allowances, Invalid and Old Age Pensions, War Pensions, Dealings and Transactions under Commonwealth Inscribed Stock Act.

Works and Railways. Digests, Nos. 1 to 26.

### 3. State Publications.—The chief publications of each State are as follows:—

#### (i.) New South Wales.—(a) *Publications by Government Statistician:—*

Statistical Register (annual); Official Year Book of New South Wales, (annual); Statesman's Year Book (annual); Vital Statistics (monthly and annual); Statistical Bulletin (monthly); Six States of Australia and New Zealand (annual) to 1905; Reports on Rural and Manufacturing Industries, and on Value of Production (annual and special); Population of New South Wales (quarterly); Comparative Legislation relating to the Industrial Classes; Friendly Societies' Experience, 1900-1908.

#### (b) *Departmental Papers:—*

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—

Aborigines; Accounts; Agriculture; Art Gallery; Auditor-General; Botanical Gardens; Brickworks; Budget; Disaster Relief; Education; Estimates; Explosives; Factories and Shops (Minimum Wage, Early Closing,

(c) *Reports and Statements of Local Bodies as follows:—*

Fire Commissioners; Harbour Trusts; Hospitals; Municipalities; University; Water Supply and Sewerage Boards.

ii.) *Victoria.*—(a) *Publications by Government Statist:—*

Statistical Register (annual); Victorian Year Book (annual); Vital Statistics (annual and quarterly); Statistical Abstracts (quarterly); Returns of Oversea Imports and Exports (monthly); Reports on Rural and Manufacturing Industries, and on Value of Production (annual and special); Report on Friendly Societies (annual); Report on Trade Unions (annual).

(b) *Departmental Papers:—*

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—Aborigines; Accident Insurance; Accounts; Agriculture, and Agricultural Colleges; Astronomer; Auditor-General; Budget; Charitable Institutions; Coal Miners' Accident Relief; Coal Mines; Council of Judges; Country Roads; Education; Estimates; Explosives; Factories (Work-rooms, Shops, etc.); Finance; Forests; Friendly Societies; Health; Indeterminate Sentences; Inebriates' Institutions; Insane; Lands and Survey; Lands Purchase and Management; Licenses Reduction; Marine; Mines; Neglected Children and Reformatory Schools; Observatory; Parliamentary Reports; Penal Establishments, Gaols, and Reformatory Prisons; Public Library, Museums, and National Gallery; Public Service; Railways (Railway Construction, Parliamentary Standing Committee, etc.); Rivers and Water Supply; Savings Banks; University.

Reports of Parliamentary Committees, Commissions, Conferences, etc.; Agricultural Journal (monthly); Trade Reports; Memoirs and Bulletins of the Geological Survey; Return of Yield of Goldfields (quarterly); Returns under Acts relating to Banks and Currency, Public Companies, Electric Light and Power, etc.; Bank Liabilities and Assets (quarterly); Determinations of Wages Boards and Courts of Industrial Appeal.

(c) *Reports and Statements of Local Bodies as follows:—*

Fire Brigades Boards; Harbour Trusts; Hospitals and Benevolent Asylums; Municipalities; University; Waterworks Trusts; Works (Melbourne and Metropolitan Board).

(iii.) **Queensland.**—(a) *Publications by Government Statistician* :—

Statistical Register (annual); Official Year Book, 1901; A.B.C. of Queensland Statistics (annual); Vital Statistics (annual and monthly); Population of Queensland, 1916; Reports on Rural and Manufacturing Industries (annual and special).

(b) *Departmental Papers* :—

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—Aborigines; Accounts; Advertising; Agent-General; Agricultural Bank; Agriculture and Stock; Analyst; Art Gallery; Auditor-General; Budget; Education; Estimates; Explosives; Finance; Forests; Friendly Societies; Government Relief; Harbours and Rivers; Health; Hospitals for Insane; Immigration; Industrial Undertakings; Insolvency; Intestate Estates; Labour (Factories, Shops, etc.); Lands; Life Insurance and Annuities; Machinery and Scaffolding; Marine; Medicine (Tropical Medicine, Inspection of Schools, etc.); Mines; Orphanages; Parliamentary Papers; Police; Prisons; Public Library; Public Service; Public Works; Railways; Savings Bank; State Children's Department; Sugar Experimental Stations; and Central Sugar Mills; Taxation; Thursday Island; University; Water Supply; Workers' Dwellings.

Reports of Parliamentary Committees, Commissions, Conferences, etc.; Blue Book (annual); Agricultural Journal (monthly); Mining Journal (annual); Mining Reports (monthly); Reports of the Geological Survey; Reports on Sugar Industry; Industrial Gazette (monthly); Determinations of Wages Boards.

(c) *Reports and Statements of Local Bodies as follows* :—

Harbour Boards; Hospitals, Sanatoria, Asylums, etc.; Municipalities; University; Water Supply and Sewerage Boards.

(iv.) **South Australia.**—(a) *Publications by the Under-Secretary and Government Statist* :—

Statistical Register (annual); Official Year Book, 1912 and 1913; Blue Book (annual); Statesman's Pocket Year Book (annual); Returns of Births and Deaths (monthly); Statistical Summary, 1836 to 1910; Reports on Rural and Manufacturing Industries (annual and special).

(b) *Departmental Papers* :—

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—Accounts; Advances to Settlers; Agent-General; Agriculture; Astronomer; Audit-Commissioner; Budget; Destitution; Education; Estimates; Factories; Fisheries, and Oyster Fisheries; Gaols and Prisons; Hospitals for the Insane; Lands and Survey; Marine; Mines; National Park; Observatory; Parliamentary Papers; Police; Produce Department; Public Library; Museum and Art Gallery; Public Service; Public Works; Railways; Registrar-General; Savings Bank; State Children; Stock; Trade Unions; Woods and Forests.

Reports of Parliamentary Committees, Commissions, Conferences, etc.; Agricultural Journal (monthly); Bulletins of Department of Agriculture, and of Chemistry; Review of Mining Operations (half-yearly); Records and Reports of Geological Survey; Reports of Railway Commissioners (quarterly); Statements of Receipts and Disbursements (quarterly); Determinations of Wages Boards.

(c) *Reports and Statements of Local Bodies as follows:—*

Fire Brigades; Health Boards; Hospitals; Municipalities; Tramways Trust; University.

(v.) **Western Australia.**—(a) *Publications by Government Statistician:—*

Statistical Register (annual); Year Book, 1900-03, 1902-4, 1905 (part); Blue Book (annual); Statistical Abstracts (quarterly, previously issued monthly to July, 1917); Population and Vital Statistics (annual and quarterly); Statistical View of Progress (annual); Reports on Rural and Manufacturing Industries, and on Trade and Shipping (annual and special).

(b) *Departmental Papers:—*

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—Aborigines; Agent-General; Agricultural Bank; Agriculture; Analyst; Astronomer; Auditor-General; Budget; Charities and Industrial and Reformatory Schools; Education; Estimates; Explosives; Factories (Health, Medical, Early Closing, etc.); Finance; Fisheries; Friendly Societies (Industrial Conciliation, Arbitration, Trade Unions); Geological Survey; Harbours; Insane; Labour; Lands and Surveys, and Lands Titles; Machinery; Mines; Museum and Art Gallery; Parliamentary Papers; Police; Prisons; Public Library; Public Service; Public Works; Railways; Savings Bank; Stock; Taxation; Water Supply, Sewerage and Drainage; Woods and Forests.

Reports of Parliamentary Committees, Commissions, Conferences, etc.:—Agricultural Journal (monthly); Gold and Mineral Exports (monthly); Reports and Bulletins of the Geological Survey; Bulletins of the Department of State Medicine and Public Health; Government Savings Bank Return (monthly); Proceedings before Boards of Conciliation and Courts of Arbitration; Report on Principal Electoral Systems.

(c) *Reports and Statements of Local Bodies as follows:—*

Cemetery Boards; Fire Brigades; Harbour Trusts and Boards; Hospitals; Municipalities and Road Boards; University; Waterworks Boards.

(vi.) **Tasmania.** (a) *Publications by Government Statistician:—*

Statistical Register (annual); Statesman's Pocket Year Book, 1917; Statistical Summaries (annual); Vital Statistics and Migration (annual and monthly); Reports on Rural, etc., Production and Industries (annual and special).

(b) *Departmental Papers:—*

Annual Reports of Officials, and Departments, Boards, Bureaux, etc., relating to—Accounts; Agent-General; Agricultural Bank; Agriculture; Auditor-General; Budget; Charitable Grants; Education; Estimates; Explosives; Factories; Finance; Friendly Societies and Trade Unions; Gaols; Industrial; Health; Lands and Survey; Machinery; Mines; Museum and Botanical Gardens; Neglected Children; Parliamentary Papers; Police; Public Library; Public Service; Public Works; Railways; Savings Banks; Stock; Taxes; Titles; University.

Reports of Parliamentary Committees, Commissions, Conferences, etc.:—Agricultural Gazette (monthly), Geological Survey Bulletins; Progress of the Mineral Industry (quarterly); Wages Boards Determinations; Statement of Public Debts Sinking Fund.

(c) *Reports and Statements of Local Bodies as follows:—*

Country Libraries; Drainage Board; Fire Brigade Board; Harbour Trusts; Hospitals; Industrial Schools; Marine Boards; Municipalities; University.

### § 3. Bibliography of Recent Works on Australia.

1. *General*.—It is hoped that the accompanying list of works dealing with Australia and Australian affairs generally, while not exhaustive, may prove of some service. The list refers to works published since the year 1901, and is additional to departmental official publications.

- ACKERMANN, J. *Australia*. London, 1913.  
 BUCHANAN, A. W. *The Real Australia*. London, 1907.  
 BULLEN, FRANK T. *Advance Australia*. London, 1907.  
 CLARK, A. T. *Australian Constitutional Law*. Melbourne, 1905.  
 CLARK, VICTOR S. *The Labour Movement in Australasia*. London, 1906.  
 COLLIER, JAMES. Sir George Grey. Christchurch, 1909.  
 COLLINGRIDGE, GEORGE. *First Discovery of Australia and New Guinea*. Sydney, 1906.  
 CRAMP, K. R. *State and Federal Constitutions of Australia*. Sydney, 1913.  
 CREED, DR. J. M. *My Recollections of Australia and Elsewhere, 1842-1914*. London, 1916.  
 D'AUNET, B. *L'Aurore Australe*. Melbourne, 1905; Paris, 1907.  
 DUNCAN, N. *Australian Byways*. London, 1915.  
 FAYENC, E. *Explorers of Australia*. Melbourne, 1908.  
 FEDERAL HANDBOOK ON AUSTRALIA. Melbourne, 1914.  
 FITCHETT, REV. W. H. *The New World of the South: I. Australia in the Making; II. The Romance of Australian History*. London, 1913.  
 FOX, FRANK. *Peeps at Many Lands. Australia*. London, 1911.  
 FRASER, J. FOSTER. *Australia: The Making of a Nation*. London, 1910.  
 GAY, FLORENCE. *In Praise of Australia*. London, 1912.  
 GILLIES, WM. *Stories in English History for Young Australians*. Melbourne, 1905.  
 GLYNN, HON. P. McM. *The Federal Constitution—The Proposed Amendments*. Adelaide, 1915.  
 GREGORY, J. W. *The Dead Heart of Australia*. London, 1906. *Australia and New Zealand (in Stanford's Compendium of Geography and Travel)*. London, 1907. *Australia*. Cambridge, 1916.  
 GREY, J. G. *Australasia, Old and New*. London, 1901.  
 GULLETT, H. S. *The Opportunity in Australia*. London, 1914.  
 HARRIS, WALTER K. *Out back in Australia*. Second Edition, London, 1913; Berlin, 1914.  
 HENDERSON, G. C. Sir George Grey. London, 1907.  
 HOWITT, A. W. *The Native Tribes of South East Australia*. London, 1904.  
 JACOMB, C. E. *God's Own Country*. London, 1914.  
 JENKS, E. *History of the Australian Colonies*. 3rd Edition, London, 1912.  
 JOHNS, FRED. *Australasia's Prominent People*. London, 1914.  
 JOHNS, FRED. *A Journalist's Jottings*. Adelaide, 1917.  
 JOHNSTON, SIR H. *Pioneers in Australasia*. London, 1913.  
 JOSE, A. W. *History of Australasia*. Sydney, 1909 and 1911.  
 KEENAN, J. J. *Commonwealth of Australia Inaugural Celebrations*. Sydney, 1907.  
 KNOWLES, G. S. *The Acts of the Parliament of the Commonwealth of Australia from 1901 to 1911, and in force on January 1, 1912*. London, 1914.  
 LEE, IDA (Mrs. C. B. Marriott.) *The Coming of the British to Australia, 1788-1829*. London, 1906.  
 LONG, C. R. *Stories of Australian Exploration*. Melbourne. Editions 1903, 1906, and 1913.  
 MAIDEN, J. H. Sir Joseph Banks, the Father of Australia. Sydney, 1909.  
 MANES, ALFRED. *Der Soziale Erdteil: Studienfahrt eines National-Ökonomen durch Australasien*. Berlin, E. S. Mittler und Sohn.  
 MANUAL OF EMERGENCY LEGISLATION. Commonwealth of Australia. Melbourne, 1916.  
 MASSON, E. R. *An Untamed Territory—The Northern Territory of Australia*. London, 1915.  
 METIN, A. *Le Socialisme sans doctrines: la question ouvrière et la question agraire en Australie et Nouvelle Zélande*. Paris, 1901.  
 MILLS, R. C. *The Colonization of Australia (1829-42)*. London, 1915.  
 MOORE, W. H. *The Constitution of the Commonwealth of Australia*. London, 1902. Second Edition. Melbourne, 1910.  
 MORGAN, B. H. *The Trade and Industry of Australia*. London, 1909.  
 MURDOCH, WALTER. *The Australian Citizen*. Melbourne, 1912. *The Making of Australia*. Melbourne, 1917.  
 MURPHY, H. M. *Labour and Wages in Australia*. Melbourne, 1917.  
 NELSON, W. *Foster Fraser's Fallacies*. Sydney, 1910.  
 PHILLIPS, MARION. *A Colonial Autocracy*. London, 1909.  
 PRATT, E. A. *The State Railway Muddle in Australia*. London, 1912.  
 PULSFORD, E. *Commerce and the Empire*. London, 1903.

## SECTION II.

### DISCOVERY, COLONISATION, AND FEDERATION OF AUSTRALIA.

#### § 1. Early Knowledge of Australia.

A brief, though fairly comprehensive, account of the discovery and early knowledge of Australia was given in Year Book No. 1 (pp. 44 to 51). This account appeared in a condensed form in Year Books Nos. 2, 3, and 4. Bibliographical references to the subject were also given in Year Book No. 1 (p. 49). Exigencies of space prevent the inclusion of any further reference to this subject in the present issue.

#### § 2. The Taking Possession of Australia.

Reference was made to the more important facts relating to the taking possession and annexation of Australia in each of the first four issues of this book: see preferably Year Book No. 4 (pp. 15 and 16). In so far as the annexation of the eastern parts is concerned, a full historical account of the period may be found in the "Historical Records of New South Wales," Vol. I., parts 1 and 2. For an account of the annexation of Western Australia, reference may be made to the West Australian Year Book 1905, Part 1.

#### § 3. The Creation of the Several Colonies.

1. **Introduction.**—A historical summary of the facts relating to the creation of the several colonies, the separation of Victoria and Queensland, and the changes in the boundaries of certain of the colonies has appeared in previous issues of this book: see Year Book No. 4 (pp. 16 to 23). The main facts in this connection may be traced by reference to the maps in preceding issues (see Year Book, No. 4, pp. 17 and 18).

2. **No further Creation of Colonies after 1859.**—Since the separation of Queensland in 1859 no other creation of colonies has taken place in Australia, though the boundaries of New South Wales, Queensland, and South Australia were altered later, and the control of the Northern Territory was transferred from South Australia to the Commonwealth in 1911. In 1914, the boundary between Victoria and South Australia, which had been in dispute, was determined by the High Court. The dates of foundation of the Australasian colonies, and their areas at the close of 1859, were as shewn in the following table:—

**DATES OF FOUNDATION OF AUSTRALASIAN COLONIES AND AREAS AS AT  
END OF 1859.**

Colony.	Date of Annexation.	Date of Creation.	Date of First Permanent Settlement.	Area. Square Miles.
New South Wales ... ..	1770	1786	1788	1,020,412
Tasmania ... ..	1788	1825	1803	26,215
South Australia ... ..	1788	1834	1836	309,850
Victoria ... ..	1770	1851	1834	87,884
Queensland ... ..	1770	1859	1824	554,300
Western Australia ... ..	1829	1829	1829	975,920
New Zealand ... ..	1840	1841	1814	104,471 <sup>1</sup>

1. By proclamation dated 10th June, 1901, the area of the Dominion was increased by 280 square miles, making it now 104,751 square miles, by the inclusion of the Cook Group and other islands.

3. **Australasia, 1863 to 1900.**—The immense area generally known as Australasia had, by 1863, been divided into seven distinct colonies, the areas of which are shewn below. The areas of the Northern Territory and the Federal Capital Territory, which are now under the exclusive jurisdiction of the Commonwealth, are given separately.

On the 1st January, 1901, the colonies mentioned above, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies" being at the same time changed into that of "States." The total area of the Commonwealth is, therefore, 2,974,581 square miles; the dates of creation and the areas of the separate colonies and territories, as determined on the final adjustment of their boundaries, are shewn in the following table:—

**DATES OF CREATION AND AREAS OF THE SEVERAL COLONIES AND  
TERRITORIES.**

Colony.	Year of For- mation into Separate Colony.	Present Area in Square Miles.	Colony.	Year of For- mation into Separate Colony.	Present Area in Square Miles.
New South Wales ...	1786	309,460 <sup>1</sup>	New Zealand ...	1841	104,751
Tasmania ... ..	1825	26,215	Victoria ... ..	1851	87,884
Western Australia ...	1829	975,920	Queensland ... ..	1859	670,500
South Australia (proper)	1834	380,070	Northern Territory	1863	523,620
			Fed. Capital Ter't'y	1911	912 <sup>2</sup>
Commonwealth ... ..			2,974,581 square miles.		
Australasia ... ..			3,079,332 square miles.		

1. Exclusive of Federal Capital Territory.

2. Prior to 1911 included with New South Wales.

4. **British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or *Papua*, finally annexed by the British Government in 1884. This territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on the 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles. More extended reference to this dependency of the Commonwealth will be found in Section XXIX.

5. **Transfer of the Northern Territory to the Commonwealth.**—On the 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under the Northern Territory

## TRANSFER OF THE FEDERAL CAPITAL TERRITORY TO THE COMMONWEALTH. 15

Surrender Act 1907 (assented to on the 14th May, 1908), and by the Commonwealth Parliament under the Northern Territory Acceptance Act 1910 (assented to on the 16th November, 1910). The Territory accordingly was transferred by proclamation to the Commonwealth on the 1st January, 1911. Further information may be found in the section of this book (xxxii.) on "*The Northern Territory*."

6. **Norfolk Island.**—Although administered for many years by the Government of New South Wales, this island was, until 1st July, 1914, a separate Crown colony. On that date it was taken over by the Federal Parliament as a territory of the Commonwealth. Further reference to the island will be found in the latter part of Section XXXIV.

### § 4. Transfer of the Federal Capital Territory to the Commonwealth.

On the 18th October, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 912 square miles as the seat of Government of the Commonwealth. In December, 1909, Acts were passed by the Commonwealth and New South Wales Parliaments, approving the agreement, and on the 5th December, 1910, a proclamation was issued vesting the Territory in the Commonwealth on and from the 1st January, 1911. Further reference to the Territory will be found in Section XXXI. of this book.

### § 5. The Exploration of Australia.

A fairly complete, though brief, account of the Exploration of Australia was given in Year Book No. 2 (pp. 20 to 39). A brief summary of the more important facts relating to the subject was given in Year Books Nos. 3 and 4. Maps shewing the progress of Australian exploration may also be found in previous issues (see No. 8, p. 35).

### § 6. The Constitutions of the States.

A brief and condensed statement of the constitutional history of the several States, shewing how their present Constitutions have been built up, may be found in Section II. of the second, third, and fourth issues of the Year Book. (See No. 4, pp. 27 to 32).

### § 7. The Federal Movement in Australia.

A summary was given in Year Book No. 1 (pp. 17 to 21) of the "Federal Movement in Australia" from its inception to its consummation; a synopsis thereof was given in Year Books Nos. 2, 3, and 4. (See No. 4, pp. 32 to 37.)

### § 8. Creation of the Commonwealth.

1. **The Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vic., Chapter 12, namely, an Act to constitute the Commonwealth of Australia, was shewn *in extenso* in Year Book No. 1. In the Year Books Nos. 2, 3 and 4, a summary of the Act was given. As two amending Acts, namely, the Constitution Alteration (Senate Elections) Act 1906, and the Constitution Alteration (State Debts) Act 1909, have been passed, it was thought desirable to insert the Act, as amended, in full in Year Book No. 5 and subsequent issues.

#### THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT. 63 & 64 VICT., CHAPTER 12.

*An Act to constitute the Commonwealth of Australia. [9th July, 1900.]*

**W**HEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established :

And whereas it is expedient to provide for the admission into the Commonwealth of other Australasian Colonies and possessions of the Queen :

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British Ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.
6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.
- "The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States: and each of such parts of the Commonwealth shall be called "a State."
- "Original States" shall mean such States as are part of the Commonwealth at its establishment.
7. The Federal Council of Australasia Act 1885 is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.
- Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.
8. After the passing of this Act the Colonial Boundaries Act 1895 shall not apply to any colony which becomes a State of the Commonwealth: but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.
9. The Constitution of the Commonwealth shall be as follows:—

#### THE CONSTITUTION.

This Constitution is divided as follows:—

##### Chapter I.—The Parliament:—

Part I.—General.

Part II.—The Senate.

Part III.—The House of Representatives.

Part IV.—Both Houses of Parliament.

Part V.—Powers of the Parliament.

##### Chapter II.—The Executive Government.

##### Chapter III.—The Judicature.

##### Chapter IV.—Finance and Trade.

##### Chapter V.—The States.

##### Chapter VI.—New States.

##### Chapter VII.—Miscellaneous.

##### Chapter VIII.—Alteration of the Constitution.

#### The Schedule.

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament," or "The Parliament of the Commonwealth."

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General, for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth: but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State. The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for that State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*,<sup>1</sup> and the places of those of the second class at the expiration of [the sixth year] *six years*<sup>1</sup> from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.<sup>3</sup>

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before*<sup>1</sup> the places are to become vacant.

For the purpose of this section the term of service of a senator shall be taken to begin on the first day of [January] *July*<sup>1</sup> following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July*<sup>1</sup> preceding the day of his election.<sup>2,4</sup>

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

1. As amended by section 2 of the Constitution Alteration (Senate Elections) 1906. The words in square brackets have been repealed; amendments are shown in italics.

2. Under sections 3 and 4, the Constitution Alteration (Senate Elections) 1906, it was also provided that—

(a) The terms of service of the senators whose places would, but for this Act, become vacant at the expiration of the year One thousand nine hundred and nine are extended until the thirtieth day of June One thousand nine hundred and ten.

(b) The terms of service of the senators whose places would, but for this Act, become vacant at the expiration of the year One thousand nine hundred and twelve are extended until the thirtieth day of June One thousand nine hundred and thirteen.

(c) This Act shall not be taken to alter the time of beginning of the term of service of any senator elected in the year One thousand nine hundred and six.

3. A bill was passed by the Commonwealth Parliament on the 2nd September, 1915, for the submission to the electors of a proposed law to alter section 13 by inserting after *three years* the words *and two months*, and after *six years* where mentioned the words *and four months*.

4. It was also proposed by the bill alluded to above to alter the foregoing paragraph so as to read thus:—For the purposes of this section the term of service of the senators elected in the year One thousand nine hundred and fourteen shall be taken to have begun on the first day of October, One thousand nine hundred and fourteen, and the term of service of a senator elected to fill a vacancy thereafter occurring in rotation shall be taken to begin on the day on which the place he is to fill becomes vacant, and the term of service of senators elected at an election next after a dissolution of the Senate shall be taken to begin on the day of the first meeting of the House of Representatives after dissolution. A writ was issued for a referendum (to be taken on the 11th December, 1915, at the same time as referendums for the alteration of the legislative powers of the Commonwealth), but the writs were withdrawn under authority of Act 51 of 1915. See also note to section 51.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified, the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a Senator to be the President of the senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth, the Governor-General shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

### PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner :—

- (i.) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shewn by the latest statistics of the Commonwealth, by twice the number of the senators:
- (ii.) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shewn by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section, five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows :—

New South Wales	... 23	South Australia...	... 6
Victoria	... 20	Tasmania	... 5
Queensland	... 8		

Provided that if Western Australia is an Original State, the number shall be as follows :—

New South Wales	... 26	South Australia	... 7
Victoria	... 23	Western Australia	... 5
Queensland	... 9	Tasmania	... 5

27. Subject to this Constitution the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.<sup>1</sup>

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

---

1. The franchise qualification was determined by the Commonwealth Franchise Act 1902.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker, or if he is absent from the Commonwealth, the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows :—

- (i.) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen :
- (ii.) He must be a subject of the Queen, either natural-born or for at least five years naturalised under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General:

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

#### PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorised by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

## 44. Any person who—

- (i.) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power : or
- (ii.) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of the State by imprisonment for one year or longer : or
- (iii.) Is an undischarged bankrupt or insolvent : or
- (iv.) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth : or
- (v.) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons :

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

## 45. If a senator or member of the House of Representatives—

- (i.) Becomes subject to any of the disabilities mentioned in the last preceding section : or
- (ii.) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors : or
- (iii.) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State :

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House, shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year to be reckoned from the day on which he takes his seat.<sup>1</sup>

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committee of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

---

1. By the Parliamentary Allowances Act 1907, assented to on the 28th August, the amount of the allowance was increased to £600 a year.

50. Each House of the Parliament may make rules and orders with respect to—

- (i.) The mode in which its powers, privileges, and immunities may be exercised and upheld;
- (ii.) The order and conduct of its business and proceedings either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT.<sup>1</sup>

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i.) Trade and commerce with other countries, and among the States :<sup>1, 2</sup>
- (ii.) Taxation ; but so as not to discriminate between States or parts of States :
- (iii.) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth :
- (iv.) Borrowing money on the public credit of the Commonwealth :
- (v.) Postal, telegraphic, telephonic, and other like services :

1. Two proposed laws for the alteration of the Constitution were submitted to the people for acceptance or rejection on the 26th April, 1911. They were (A) The Constitution Alteration (Legislative Powers) 1910, and (B) the Constitution Alteration (Monopolies) 1910.

(A) *Constitution Alteration (Legislative Powers) 1910.* The object of this proposed law was to extend the powers of the Commonwealth Government (under section 51 of the Constitution) in four directions, viz.—(a) Trade and Commerce, (b) Corporations, (c) Industrial matters, and (d) Trusts and monopolies.

(a) *Trade and Commerce.* In Section 51, para. (i.) of the Constitution, it was proposed to omit the words "with other countries, and among the States," so as to give the Commonwealth Parliament power to legislate with respect to trade and commerce, without limitation.

(b) *Corporations.* It was proposed to omit the words (para. xx.) "Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth," and to insert in lieu thereof the words—"Corporations including (a) the creation, dissolution, regulation, and control of corporations; (b) corporations formed under the law of a State (except any corporation formed solely for religious, charitable, scientific or artistic purposes, and not for the acquisition of gain by the corporation or its members), including their dissolution, regulation, and control; and (c) foreign corporations, including their regulation and control."

(c) *Industrial Matters.* In para. xxxv. it was proposed to omit the words "Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State," and to insert in lieu thereof the words "Labour and employment, including (a) the wages and conditions of labour and employment in any trade, industry, or calling; and (b) the prevention and settlement of industrial disputes, including disputes in relation to employment on or about railways, the property of any State."

(d) *Trusts and Monopolies.* It was proposed to amend Section 51 of the Constitution by adding at the end thereof the following paragraph:—"(xl.) Combinations and monopolies in relation to the production, manufacture, or supply of goods or services."

(B) *Constitution Alteration (Monopolies) 1910.* The object of this proposed law was to alter the Constitution by inserting, after Section 51 thereof, the following section:—"51A. When each House of Parliament, in the same session, has by resolution declared that the industry or business of producing, manufacturing, or supplying goods, or of supplying any specified services, is the subject of any monopoly, the Parliament shall have power to make laws for carrying on the industry or business by or under the control of the Commonwealth, and acquiring for that purpose on just terms any property used in connection with the industry or business."

Neither of the proposed laws was approved by the people.

On the 31st May, 1913, the date of the Parliamentary elections, the same proposed alterations were again submitted to the people as five distinct laws, with an additional one whereby the conditions of employment and the settlement of disputes relating thereto in the several State railway services might be brought within the jurisdiction of the Commonwealth. All six proposed laws were negatived by the people.—See section XXV. § 2.

2. On the 15th July, 1915, the Commonwealth Parliament passed a bill for the submission to the electors of proposed laws to amend the Constitution in regard to the legislative powers of the Commonwealth Parliament. The proposed amendments differed somewhat from those submitted to the electors in the years 1911 and 1913. Thus in regard to (A) (b) *Corporations* (see 1 above) it was proposed to specifically exclude municipal and governmental corporations. (A) (c) was modified to read thus after "to insert in lieu (in their stead) the words"—Including (A) Labour, (b) Employment and unemployment, (c) The terms and conditions of labour and employment in any trade, industry, occupation, or calling, (d) The rights and obligations of employers and employees, (e) Strikes and lockouts, (f) The maintenance of industrial peace, (g) The settlement of industrial disputes. With regard to railway disputes it was proposed to insert after paragraph (xxxv.) and section 51 the following paragraph:—"(xxxv. A.) Conciliation and arbitration for the prevention and settlement of industrial disputes in relation to employment in the railway service of a State. (A) (d) was modified to read (xl.) Trusts, combinations, monopolies, and arrangements in relation to (a) the production, manufacture, or supply of goods, or the supply of services, or (b) the ownership of the means of production, manufacture, or supply of goods, or supply of services. (B) (see 1 above) was modified as follows:—After "has by resolution" the words "passed by an absolute majority of its members" were added, and an additional subsection was inserted to the effect that the section was not to apply to any industry or business conducted or carried on by the Government of a State, or any public authority constituted under a State. Writs were issued for referendums to be held on the 11th December, 1915, but they were withdrawn under Act 51 of 1915.

- (vi.) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth :
- (vii.) Lighthouses, lightships, beacons and buoys :
- (viii.) Astronomical and meteorological observations :
- (ix.) Quarantine :
- (x.) Fisheries in Australian waters beyond territorial limits :
- (xi.) Census and statistics :
- (xii.) Currency, coinage, and legal tender :
- (xiii.) Banking, other than State banking ; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money :
- (xiv.) Insurance, other than State insurance ; also State insurance extending beyond the limits of the State concerned :
- (xv.) Weights and measures :
- (xvi.) Bills of exchange and promissory notes :
- (xvii.) Bankruptcy and insolvency :
- (xviii.) Copyrights, patents of inventions and designs, and trade marks :
- (xix.) Naturalisation and aliens :
- (xx.) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth :<sup>1</sup>
- (xxi.) Marriage :
- (xxii.) Divorce and matrimonial causes ; and in relation thereto, parental rights, and the custody and guardianship of infants :
- (xxiii.) Invalid and old-age pensions :
- (xxiv.) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the Courts of the States :
- xxv.) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States :
- (xxvi.) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws :
- (xxvii.) Immigration and emigration :
- (xxviii.) The influx of criminals :
- (xxix.) External affairs :
- (xxx.) The relations of the Commonwealth with the islands of the Pacific :
- (xxxi.) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws :
- (xxxii.) The control of railways with respect to transport for the naval and military purposes of the Commonwealth :
- (xxxiii.) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State :
- (xxxiv.) Railway construction and extension in any State with the consent of that State :
- (xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State :<sup>1</sup>
- (xxxvi.) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides :
- (xxxvii.) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law :
- (xxxviii.) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia :

---

1. See footnotes 1 and 2 on previous page

(xxxix). Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order and good government of the Commonwealth, with respect to—

- (i.) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes :
- (ii.) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth :
- (iii.) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licenses, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed laws so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriations.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provisions therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only ; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the house in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of Parliament, or by Proclamation, that it has received the Queen's assent.

## CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which, until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall be transferred to the Commonwealth:—<sup>1</sup>

Posts, telegraphs, and telephones:	Lighthouses, lightships, beacons, and buoys:
Naval and military defence:	Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

### CHAPTER III.—THE JUDICATURE.

71. The Judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice and so many other Justices, not less than two, as the Parliament prescribes.

72. The Justices of the High Court and of the other courts created by the Parliament—

- (i.) Shall be appointed by the Governor-General in Council:
- (ii.) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii.) Shall receive such remuneration as the Parliament may fix: but the remuneration shall not be diminished during their continuance in office.

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i.) Of any Justice or Justices exercising the original jurisdiction of the High Court:
  - (ii.) Of any other federal court or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
  - (iii.) Of the Inter-State Commission, but as to questions of law only:
- and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

1. As to departments and dates of transfer see Section XIX.—COMMONWEALTH FINANCE, § 1 hereinafter.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i.) Arising under any treaty ;
- (ii.) Affecting consuls or other representatives of other countries ;
- (iii.) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party ;
- (iv.) Between States, or between residents of different States, or between a State and a resident of another State ;
- (v.) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth ;

the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i.) Arising under this Constitution, or involving its interpretation ;
- (ii.) Arising under any laws made by the Parliament ;
- (iii.) Of Admiralty and maritime jurisdiction ;
- (iv.) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i.) Defining the jurisdiction of any federal court other than the High Court ;
- (ii.) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States ;
- (iii.) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

#### CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon ; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth ; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i.) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth ; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary ;
- (ii.) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department ; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth ;
- (iii.) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section : if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament ;
- (iv.) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied to the payment of interest on debts of the several States taken over by the Commonwealth.<sup>1</sup>

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.<sup>2</sup>

89. Until the imposition of uniform duties of customs—

(i.) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.

(ii.) The Commonwealth shall debit to each State—

(a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;

(b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.

(iii.) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs and thereafter until the Parliament otherwise provides—

(i.) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State:

1. This has been known as the Braddon clause. The Surplus Revenue Act 1910 provides for the termination of this clause as from the 31st December, 1910, and for the payment to the States of twenty-five shillings per head of population until the 30th June, 1920, or thereafter, until Parliament otherwise provides, subject to certain adjustments for the year ended 30th June, 1911. For further information see Section XIX. hereinafter.

2. Uniform customs duties were imposed by the Customs Tariff 1902, as from 8th October, 1901.

- (ii.) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed by the period preceding the imposition of uniform duties of customs.<sup>1</sup>

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned, whenever the Colony, or the Government or an officer of the Colony is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.<sup>2</sup>

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State, due regard being had to the financial responsibilities incurred by any State in connection with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

1. The Surplus Revenue Act 1908, which was amended by the Surplus Revenue Act 1910, states that the provisions of Section 93 of the Constitution shall expire on the date of the commencement of the Surplus Revenue Act 1908, that is, on 13th June, 1908, and also makes provisions in lieu of the expired provisions. The Surplus Revenue Act 1910 repeals the greater part of the provisions of the Act of 1908. See footnote to Section 87 of this Act.

2. The Commission was brought into existence in 1913, under Act No. 33 of 1913.

103. The members of the Inter-State Commission—

- (i.) Shall be appointed by the Governor-General in Council :
- (ii.) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity :
- (iii.) Shall receive such remuneration as the Parliament may fix ; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],<sup>1</sup> or a proportion thereof according to the respective numbers of their people as shewn by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof ; and the State shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

#### CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State ; and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the Government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth ; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State ; but the net produce of all charges so levied shall be for the use of the Commonwealth ; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

1. Under Section 2 of the Constitution Alteration (State Debts) 1909, the words in square brackets are omitted.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion, and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

#### CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

#### CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the seat of Government.

126. The Queen may authorise the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen: but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

#### CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.<sup>1</sup>

128. This constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.<sup>2</sup>

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

#### SCHEDULE.

##### OATH.

I, A.B., do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

##### AFFIRMATION.

I, A.B., do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

1. The Constitution has been altered by the following Acts:—The Constitution Alteration (Senate Elections) 1906 (No. 1 of 1907); and the Constitution Alteration (State Debts) 1909 (No. 3 of 1910).

2. The Referendum (Constitution Alteration) Act, 1906-1910, provides the necessary machinery for the submission to the electors of any proposed law for the alteration of the Constitution.

2. **The Royal Proclamation.**—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful (see Sec. 3) to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901: it reads as follows :—

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of Australia," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One Year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

### § 9. Commonwealth Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the late Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on the 9th May following by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King; the Rt. Hon. Sir Edmund Barton, P.C., G.C.M.G., K.C., being Prime Minister.

The following table gives the number and duration of Parliaments since Federation :—

COMMONWEALTH PARLIAMENTS, 1901 to 1917.

	Date of Opening.	Date of Dissolution.
First Parliament ... ..	29th April, 1901 ...	23rd November, 1903.
Second „ ... ..	2nd March, 1904 ...	12th October, 1906.
Third „ ... ..	20th February, 1907 ...	19th February, 1910.
Fourth „ ... ..	1st July, 1910 ...	23rd April, 1913.
Fifth „ ... ..	9th July, 1913 ...	27th June, 1914.*
Sixth „ ... ..	8th October, 1914 ...	26th March, 1917.
Seventh „ ... ..	14th June, 1917 ...	—

\* On this occasion, the Governor-General, acting on the advice of the Ministry, and under section 57 of the Constitution, granted a dissolution of both the Senate and the House of Representatives, this being the first occasion since Federation on which a dissolution of both Houses had occurred.

The Debates of these Parliaments will be found in Volumes I. to LXXXI. of the Parliamentary Debates, as follows:—

First Parliament,	1st Session	Vols.	I. to	XII., pp. 1 to 16,744

\* G.C.M.G., 1918. † Created Lord Forrest of Bunbury, 1918.

A further list of the Ministers of State for the Commonwealth, arranged according to the respective offices occupied, is given in the section of this book dealing with the subject of *General Government* (see Section XXV.).

3. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament up to the end of the 1917 session is indicated in alphabetical order in "Vol. 15 of the Acts of the Parliament of the Commonwealth of Australia, passed in the session of 1917, with Tables, Appendix and Indexes." A "Chronological Table of Acts passed from 1901 to 1917, shewing how they are affected by subsequent legislation or lapse of time" is also given, and further "A Table of Commonwealth Legislation," for the same period, "in relation to the several provisions of the Constitution," is furnished. Reference may be made to these for complete information. The nature of Commonwealth legislation, up to December, 1917, and its relation to the several provisions of the Constitution, are set forth in the following tabular statement:—

**ANALYTIC TABLE OF COMMONWEALTH LEGISLATION

## SECTION III.

### PHYSIOGRAPHY.

#### § 1. General Description of Australia.

1. **Geographical Position.**—The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 39° 8' S., or, including Tasmania, 43° 39' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean and Bass Strait.<sup>1</sup>

*Tropical and Temperate Regions.* Of the total area of Australia the lesser portion lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is 23° 30' S.,<sup>2</sup> the areas within the tropical and temperate zones are approximately as follows:—

**AREAS OF TROPICAL AND TEMPERATE REGIONS  
OF STATES AND TERRITORY WITHIN TROPICS.**

Areas.	Queensland.	Western Australia.	Northern Territory.	Total.
	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.
Within Tropical Zone     ...     ...	359,000	364,000	426,320	1,149,320
Within Temperate Zone     ...     ...	311,500	611,920	97,300	1,020,720
Ratio of Tropical part to whole State     ...	0.535	0.373	0.814	0.530
Ratio of Temperate part to whole State     ...	0.465	0.627	0.186	0.470

Thus the tropical part is roughly about one-half (0.530) of the three territories mentioned above, or about five-thirteenths of the whole Commonwealth (0.386). See hereafter Meteorology 3, page 57.

2. **Area of Australia compared with that of other Countries.**—That the area of Australia is greater than that of the United States of America, that it is four-fifths of that of Canada, that it is nearly one-fourth of the area of the whole of the British Empire, that it is nearly three-fourths of the whole area of Europe, that it is more than 25 times as large as any one of the following, viz., the United Kingdom, Hungary, Italy, the Transvaal, and Ecuador, are facts which are not always adequately realised. It is this great size, taken together with the fact of the limited population, that gives to the problems of Australian development their unique character, and its clear comprehension is essential in any attempt to understand those problems.

1. The extreme points are "Steep Point" on the west, "Cape Byron" on the east, "Cape York" on the north, "Wilson's Promontory" on the south, or, if Tasmania be included, "South East Cape." The limits, according to the 1903-4 edition of "A Statistical Account of Australia and New Zealand," p. 2, and, according to Volume XXV. of the "Encyclopædia Britannica," tenth edition, p. 787, are respectively 113° 5' E., 153° 16' E., 10° 39' S., and 39° 11' S., but these figures are obviously defective. A similar inaccuracy appears in the XI. edition of the Encyclopædia.

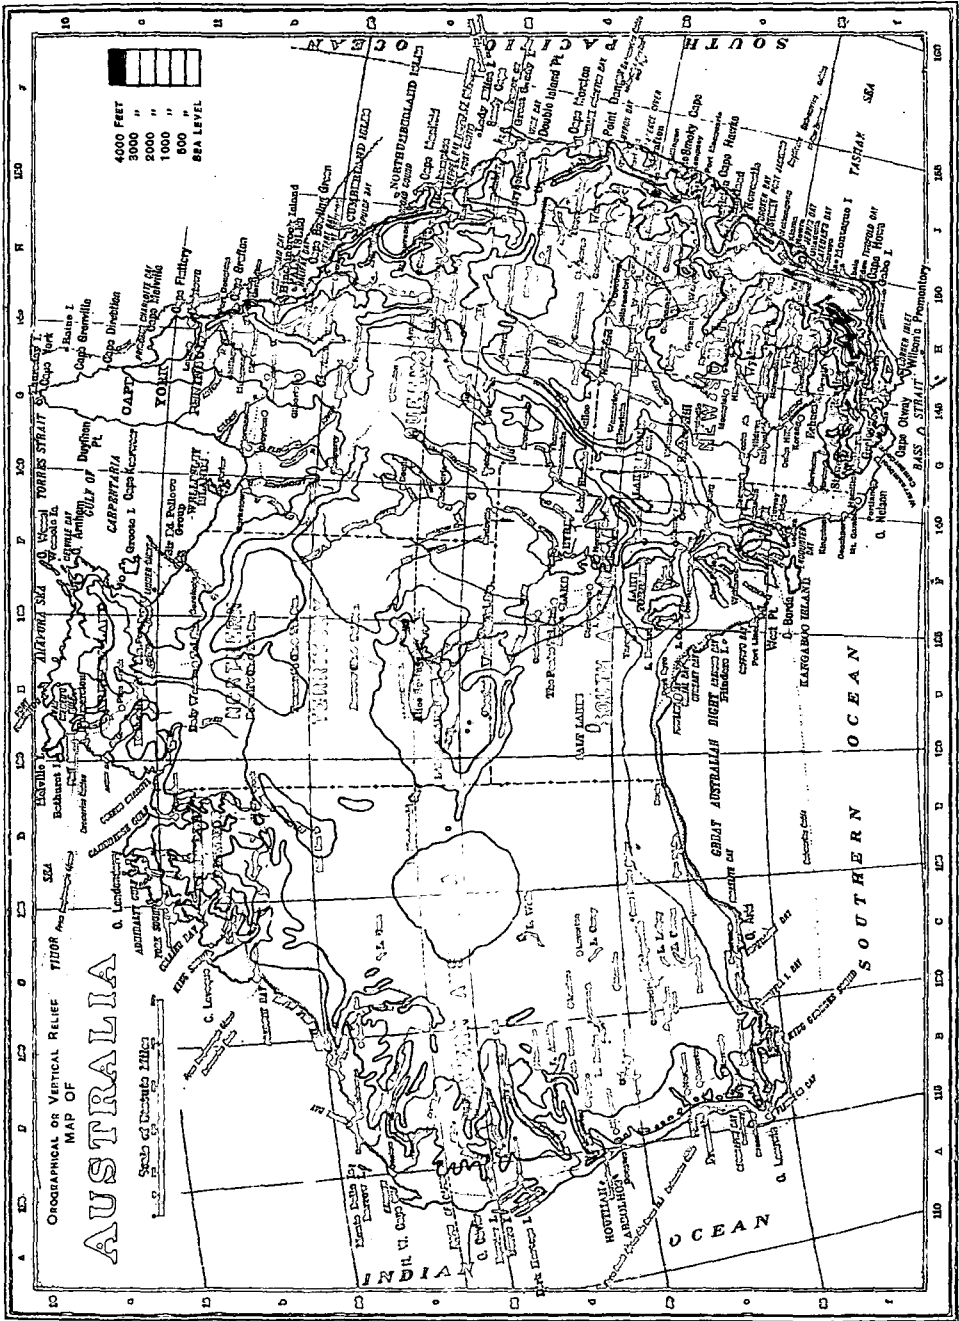

2. Its correct value for 1918 is 23° 26' 59.83", and it decreases about 0'.47 per annum.

The relative magnitudes may be appreciated by a reference to the following table, which shews how large Australia is compared with the countries referred to, or *vice versa*. Thus, to take line 1, we see that Europe is about  $1\frac{3}{4}$  times (1.29679) as large as Australia, or that Australia is about three-quarters (more accurately 0.77) of the area of Europe.

**SIZE OF AUSTRALIA IN COMPARISON WITH THAT OF OTHER COUNTRIES.**

It should be noted that in the table above the figures quoted for areas refer to conditions prevailing prior to the outbreak of war.

**3. Relative Size of Political Subdivisions.**—As already stated, Australia consists of six States and the Northern and Federal Territories. The areas of these, in relation to one another and to the total of Australia, are shewn in the following table:—

**RELATIVE SIZE OF STATES, TERRITORIES, AND COMMONWEALTH.**

State or Territory.	Area.	Ratio which the Area of each State and Territory bears to that of other States, Territories and Commonwealth.							
		N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N. Ter.	C'wlth.
	Sq. miles.								
New South Wales	309,460	1.000	3.522	0.462	0.814	0.317	11.806	0.591	0.104
Victoria ...	87,884	0.284	1.000	0.131	0.231	0.090	3.352	0.168	0.030
Queensland ...	670,500	2.166	7.629	1.000	1.764	0.687	25.577	1.280	0.225
South Australia	380,070	1.228	4.325	0.567	1.000	0.389	14.498	0.726	0.128
West. Australia	975,920	3.153	11.105	1.455	2.568	1.000	37.228	1.964	0.328
Tasmania ...	26,215	0.085	0.298	0.039	0.069	0.027	1.000	0.050	0.009
North. Territory	523,620	1.691	5.958	0.781	1.378	0.537	19.974	1.000	0.176
Federal Territory	912	0.003	0.010	0.001	0.003	0.001	0.034	0.002	0.000 <sup>1</sup>
Commonwealth	2,974,581	9.610	33.847	4.436	7.827	3.048	113.469	5.681	1.000

1. The correct decimal is 0.0003.

Thus, looking at the top line, New South Wales is seen to be over three-and-a-half times as large as Victoria (3.522) and less than one-half the size of Queensland (0.462); or again, looking at the bottom line, the Commonwealth is shewn to be more than nine-and-a-half times as large as New South Wales (9.610), and nearly thirty-four times as large as Victoria (33.847).

These relative magnitudes are shewn in the small diagram below. It may be added that Papua (or British New Guinea), with its area of 90,540 square miles, is 0.030 of the area of the Commonwealth. The comparatively small-size of the Federal Territory prevents its being shewn in this diagram.

% on total ...	N.S.W. 10	V. 3	Qld. 22	S.A. 13	N.T. 18	W.A. 33	Tas. 1
-------------------	--------------	---------	------------	------------	------------	------------	-----------

**4. Coastal Configuration.**—There are no striking features in the configuration of the coast; the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The York Peninsula on the extreme north is the only other remarkable feature in the outline. In Year Book No. 1, an enumeration of the features of the coast-line of Australia was given (see pp. 60 to 68).

(i.) *Coast-line.* The lengths of coast-line, exclusive of minor indentations, both of each State and of the whole continent, are shewn in the following table:—

## SQUARE MILES OF TERRITORY PER MILE OF COAST LINE.

## STATES, TERRITORY, AND CONTINENT.

State.	Coast-line.	Area ÷ Coast-line.	State.	Coast-line.	Area ÷ Coast-line.
	Miles.	Sq. miles.		Miles.	Sq. miles.
New South Wales <sup>1</sup>	700	443	South Australia ...	1,540	247
Victoria ...	680	129	Western Australia	4,350	224
Queensland ...	3,000	223	Continent <sup>2</sup> ...	11,310	261
Northern Territory	1,040	503	Tasmania ...	900	29

1. Including Federal Territory.

2. Area 2,948,366 square miles.

For the entire Commonwealth this gives a coast-line of 12,210 miles, and an average of 244 square miles for one mile of coast line. According to Strelbitski, Europe has only 75 square miles of area to each mile of coast line, and, according to recent figures, England and Wales have only one-third of this, viz., 25 square miles.

(ii.) *Historical Significance of Coastal Names.* It is interesting to trace the voyages of some of the early navigators by the names bestowed by them on various coastal features—thus Dutch names are found on various points of the Western Australian coast, in Nuyt's Archipelago, in the Northern Territory and in the Gulf of Carpentaria; Captain Cook can be followed along the coasts of New South Wales and Queensland; Flinders' track is easily recognised from Sydney southwards, as far as Cape Catastrophe, by the numerous Lincolnshire names bestowed by him; and the French navigators of the end of the eighteenth and the beginning of the nineteenth century have left their names all along the Western Australian, South Australian, and Tasmanian coasts.

5. *Geographical Features of Australia.*—In each preceding issue of this Year Book, fairly complete information has been given concerning some special geographical element. Thus No. 1 Year Book, pp. 60-68, contains an enumeration of Coastal features, No. 2, pp. 66-67, deals with Hydrology, No. 3, pp. 59-72, with Orography, No. 4, pp. 59-82, with the Lakes of Australia, No. 5, pp. 51-80, with the Islands of Australia, No. 6, pp. 55-66, with the Mineral Springs of Australia, and No. 7, pp. 56-58, with the Salient Features in the Geological History of Australia, with special reference to changes of climate. This practically completes the description of the ordinary physical features. An orographical or vertical relief map of Australia will be found on p. 49.

## § 2. The Fauna of Australia.

An authoritative article describing in some detail the principal features of the Fauna of Australia was given in Year Books No. 1 (see pp. 103 to 109) and No. 2 (see pp. 111 to 117), while a synoptical statement appeared in No. 3 (see pp. 73 to 76). Considerations of space will, however, preclude the inclusion in this issue of more than a passing reference to the subject.

## § 3. The Flora of Australia.

In Year Books No. 1 (see pp. 109 to 114) and No. 2 (see pp. 117 to 122) a fairly complete though brief account was given of the Flora of Australia, and in Year Book No. 3 similar information in a greatly condensed form will be found on pp. 76 to 78. Space in this issue will not permit of more than a mere reference to preceding volumes.

A special article dealing with Australian fodder plants, contributed by J. H. Maiden, Esq., F.L.S., Government Botanist of New South Wales, and Director of the Botanic Gardens, Sydney, appeared in Official Year Book No. VI., pp. 1190-6. A special article on the grasses and saltbushes of Australia, contributed by E. Breakwell, B.A., B.Sc., Agrostologist at the Botanic Gardens, Sydney, appeared in Year Book No. 9, pp. 84-90. Year Book No. 10 contained two special articles, one dealing with Australian eucalyptus timbers contributed by R. T. Baker, F.L.S., appeared on pp. 85 to 92, and one by H. G. Smith, F.C.S., dealing with the chemical products of Australian eucalypts appeared on pp. 92-8.

#### § 4. Seismology in Australia.

A brief statement regarding the position of seismology and seismological record in Australia appears in Year Book No. 4, pp. 82 and 83.

#### § 5. The Geology of Australia.

1. **General.**—Independent and authoritative sketches of the geology of each State were given in Year Books No. 1 (see pp. 73 to 103) and No. 2 (see pp. 78 to 111). Want of space has precluded the insertion of these sketches in the present issue of the Year Book, and it has not been considered possible to give anything like a sufficient account of the geology of Australia by presenting here a mere condensation of these sketches. Reference must, therefore, be made to either Year Book No. 1 or No. 2, *ut supra*.

2. **Geological Map of Australia.**—The map of the Geology of Australia on page 50, shews the geographical distribution of the more important geological systems and formations.

3. **The Building Stones of Australia.**—Independent and authoritative descriptions of the building stones of each State (with the exception of Queensland) will be found in Official Year Book No. 9, pp. 446-466. It is not proposed to repeat the information in this issue.

#### § 6. Climate and Meteorology of Australia.<sup>1</sup>

1. **Introductory.**—In preceding Year Books some account was given of the history of Australian meteorology, including reference to the development of magnetic observations and the equipment for the determination of various climatological records. (See Year Book No. 3, pp. 79, 80.) In Year Book No. 4, pp. 84 and 87, will be found a short sketch of the creation and organisation of the Commonwealth Bureau of Meteorology and a resumé of the subjects dealt with at the Meteorological Conference of 1907. Space will not permit of the inclusion of this matter in the present issue.

2. **Meteorological Publications.**—The following publications are issued daily from the Central Meteorological Bureau, viz.:—(i.) Weather charts. (ii.) Rainfall maps. (iii.) Bulletins, Victorian and Interstate, shewing pressure, temperature, wind, rain, cloud extent, and weather. Similar publications are also issued from the divisional offices in each of the State Capitals.

---

1. Prepared from data supplied by the Commonwealth Meteorologist, H. A. Hunt, Esquire, F.R. Met.Soc.

The Bulletins of Climatology are as follow:—No. 1.—A general discussion of the climate and meteorology of Australia, illustrated by one map and diagrams. No. 2.—A discussion of the rainfall over Australia during the ten years (1897-1906) compared with the normal, illustrated by one map. No. 3.—Notes and statistics of the remarkable flood rains over south-eastern Australia during the winter of 1909, illustrated by five maps and diagrams. No. 4.—A discussion of the monthly and seasonal rainfall over Australia, illustrated by one map and diagram. No. 5.—An investigation into the possibility of forecasting the approximate winter rainfall for Northern Victoria, illustrated by two diagrams. No. 6.—The physiography of the Federal Territory at Canberra, illustrated by a relief map and 21 plates. No. 7.—On the climate of the Yass-Canberra district, illustrated by one map. No. 8.—Physiography of Eastern Australia, with 28 text illustrations. No. 9.—The climate of Australia, with charts and diagrams, prepared for the Federal Handbook of Australia. No. 10.—Relation between cirrus directions as observed in Melbourne and the approach of the various storm systems affecting Victoria, illustrated by a number of charts. No. 11.—The climatic control of Australian production, with 43 illustrations. No. 12.—A graphical method of shewing the daily weather and especially cloud types, with two graphs. No. 13.—Initial investigations in the upper air of Australia, with 35 illustrations. No. 14.—The control of settlement by humidity and temperature, with 21 charts and diagrams.

Commencing with January 1910, the "Australian Monthly Weather Report," containing statistical records from representative selected stations; with rain maps and diagrams, etc., is being published. Complete rainfall and other climatological data are published in annual volumes of meteorological statistics for each State separately.

The first text book of Australian meteorology, "Climate and Weather of Australia," was published in 1913.

**3. General Description of Australia.**—In the general description of Australia, page 47, it is pointed out that a considerable portion (0.530) of three divisions of the Australian Commonwealth is north of the tropic of Capricorn, that is to say, within the States of Queensland and Western Australia, and the Northern Territory, no less than 1,149,320<sup>1</sup> square miles belong to the tropical zone, and 1,020,720 to the temperate zone. The whole area of the Commonwealth within the temperate zone, however, is 1,825,261<sup>2</sup> square miles, thus the tropical part is about 0.386, or about five-thirteenths of the whole, or the "temperate" region is half as large again as the "tropical" (more accurately 1.591). By reason of its insular geographical position, and the absence of striking physical features, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe; and latitude for latitude Australia is, on the whole, more temperate.

The altitudes of the surface of Australia range up to a little over 7300 feet, hence its climate embraces a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the great Dividing Range.

While on the coast the rainfall is often abundant and the atmosphere moist, in some portions of the interior the rainfall is very limited, and the atmosphere dry. The distribution of forest, as might be expected, and its climatic influence, is consequently very variable. In the interior there are on the one hand fine belts of trees, on the other there are large areas which are treeless, and where the air is hot and parched in summer. Again, on the coast, even as far south as latitude 35°, the vegetation is tropical in its luxuriance, and also somewhat so in character. Climatologically, therefore, Australia may be said to present a great variety of features. The various climatological characteristics will be referred to in detail.

1. In the article "Australia" in the Encyclopædia Britannica, Vol. II., p. 946 (XI. Edition), this area is given as 1,145,000 square miles.

2. Given as 1,801,700 square miles in the work above quoted, where, however, the statistics are said "to refer only to the continental States of the Federation, not to Tasmania."

**4. Meteorological Divisions.**—The Commonwealth Meteorologist has divided Australia, for climatological and meteorological purposes, into five divisions. The boundaries between these may be thus defined:—(a) Between divisions I. and II., the boundary between South and Western Australia, viz., the 129th meridian of east longitude; (b) between divisions II. and III., starting at the Gulf of Carpentaria, along the Norman River to Normanton, thence a straight line to Wilcannia on the Darling River, New South Wales; (c) between divisions II. and IV., from Wilcannia along the Darling River to its junction with the Murray; (d) between divisions II. and V., from the junction of the Darling and Murray Rivers, along the latter to Encounter Bay; (e) between divisions III. and IV., starting at Wilcannia, along the Darling, Barwon, and Dumaresq Rivers to the Great Dividing Range, and along that range and along the watershed between the Clarence and Richmond Rivers to Evans Head on the east coast of Australia; (f) between divisions IV. and V., from the junction of the Darling and Murray Rivers along the latter to its junction with the Murrumbidgee, along the Murrumbidgee to the Tumut River, and along the Tumut River to Tumut, thence a straight line to Cape Howe; (g) division V. includes Tasmania.

The population included within these boundaries at the Census of the 3rd April, 1911, was approximately as follows:—

Division	I.	II.	III.	IV.	V.
Population	282,000	429,000	607,000	1,540,000	1,597,000

In these divisions the order in which the capitals occur is as follows:—(i.) Perth, (ii.) Adelaide, (iii.) Brisbane, (iv.) Sydney, (v.) Melbourne, (vi.) Hobart; and for that reason the climatological and meteorological statistics will be set forth in the indicated order in this publication.

*Special Climatological Stations.* The latitudes, longitudes, and altitudes of special stations, the climatological features of which are graphically represented herein-after, are as follows:—

#### SPECIAL CLIMATOLOGICAL STATIONS.

Locality.	Height above Sea Level.	Latitude.		Longitude.		Locality.	Height above Sea Level.	Latitude.		Longitude.	
		S.	E.	S.	E.			S.	E.	S.	E.
Perth ...	197	deg. min.	deg. min.	deg. min.	deg. min.	Darwin ...	97	deg. min.	deg. min.	deg. min.	deg. min.
Adelaide ...	140	31 57	115 50	138 35		Daly Waters ...	691	12 28	130 51	16 16	133 23
Brisbane ...	137	34 56	153 2	153 2		Alice Springs ...	1926	23 38	133 37	23 38	133 37
Sydney ...	146	27 28	151 12	151 12		Dubbo ...	870	32 18	148 35	32 18	148 35
Melbourne ...	115	33 52	144 58	144 58		Laverton ...	1530	28 40	122 23	28 40	122 23
Hobart ...	177	37 49	147 20	147 20		Coolgardie ...	1402	30 57	121 10	30 57	121 10

**5. Temperatures.**—In respect of Australian temperatures generally it may be pointed out that the isotherm for 70° Fahrenheit extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus shewing that, on the whole, Australia has a more temperate climate when compared latitude for latitude with other places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included therein, for in the United States the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe the same isotherm reaches almost to the southern shores of Spain, passing, however, afterwards along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia nearly the whole of the land area south of latitude 40° N. has a higher isothermal value than 70°.

The extreme range of shade temperatures in summer and winter in a very large part of Australia amounts to probably only 81°. In Siberia, in Asia, the similar range is no less than 171°, and in North America 153°, or approximately double the Australian range.

Along the northern shores of the Australian continent the temperatures are very equable. At Darwin, for example, the difference in the means for the hottest and coldest months is only  $8.3^{\circ}$ , and the extreme readings for the year, that is, the highest maximum in the hottest month and the lowest reading in the coldest month, shew a difference of under  $50^{\circ}$ .

Coming southward the extreme range of temperature increases gradually on the coast, and in a more pronounced way inland.

The detailed temperature results for the several capitals of the States of Australia are shewn in the Climatological Tables hereinafter.

(i.) *Hottest and Coldest Parts.* A comparison of the temperatures recorded at coast and inland stations shews that, in Australia as in other continents, the range increases with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds  $120^{\circ}$  in the shade, and during the dry winters the major portion of the country to the south of the tropics is subject to ground frosts. An exact knowledge of temperature disposition cannot be determined until the interior becomes more settled, but from data procurable, it would appear that the hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds  $100^{\circ}$  for days, and even weeks, continuously. The coldest part of the Commonwealth is the extreme south-east of New South Wales and extreme east of Victoria, namely, the region of the Australian Alps. Here, the temperature seldom, if ever, reaches  $100^{\circ}$ , even in the hottest of seasons.

In Tasmania, although occasionally hot winds may cross the Straits and cause the temperature to rise to  $100^{\circ}$  in the low-lying parts, the island as a whole enjoys a most moderate and equable range of temperature throughout the year.

(ii.) *Monthly Maximum and Minimum Temperatures.* The mean monthly maximum and minimum temperatures can be best shewn by means of graphs, which exhibit the nature of the fluctuation of each for the entire year. In the diagram (on page 67) for nine representative places in Australia, the upper heavy curves shew the mean maximum, the lower heavy curves the mean minimum temperatures based upon daily observations. On the same diagram the thin curves shew the relative humidities (see next paragraph).

**6. Relative Humidity.**—Next after temperature the degree of humidity may be regarded as of great importance as an element of climate; and the characteristic differences of relative humidity between the various capitals of Australia call for special remark. For six representative places the variations of humidity are shewn on the graph on page 67, which gives results based upon daily observations of the dry and wet bulb thermometers. Hitherto difficulties have been experienced in many parts of Australia in obtaining satisfactory observations for a continuous period of any length. For this reason it has been thought expedient to refer to the record of humidity at first order stations only, where the results are thoroughly reliable. Throughout, the degree of humidity given will be what is known as *relative humidity*, that is, the percentage of aqueous vapour actually existing to the total possible if the atmosphere were saturated.

The detailed humidity results for the several State capitals are given in the Climatological Tables hereinafter. From these, it is seen that, in respect of relative humidity, Sydney and Hobart have the first place, while Brisbane, Melbourne, Perth, and Adelaide follow in the order stated, Adelaide being the driest. The graphs on page 67 shew the annual variations in humidity. It will be observed that the *relative humidity* is ordinarily but not invariably great when the temperature is low.

**7. Evaporation.**—The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and movement. In Australia the question is of perhaps more than ordinary importance; since in its drier regions water has often to be conserved in "tanks"<sup>1</sup> and dams. The magnitude of the

1. In Australia artificial storage ponds or reservoirs are called "tanks."

economic loss by evaporation will be appreciated from the records on pages 68 and 78 to 83, which shew that the yearly amount varies from about 33 inches at Hobart to 95 inches at Alice Springs in the centre of the Continent.

(i.) *Monthly Evaporation Curves.* The curves shewing the mean monthly evaporation in various parts of the Commonwealth will disclose how characteristically different are the amounts for the several months in different localities. The evaporation for characteristic places is shewn on the diagram shewing also rainfalls (see page 68).

(ii.) *Loss by Evaporation.* In the interior of Australia the possible evaporation is greater than the actual rainfall. Since, therefore, the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Similarly, the more protected from the direct rays of the sun and from winds, by means of suitable tree planting, the less will be the loss by evaporation: these matters are of more than ordinary concern in the drier districts of Australia.

8. *Rainfall.*—As even a casual reference to climatological maps, indicating the distribution of rainfall and prevailing direction of wind, would clearly shew, the rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by the physiographical features generally.

Australia lies within the zone of the south-east trade and prevailing westerly winds. The southern limit of the south-east trade strikes the eastern shores at about 30° south latitude. Hence, we find that, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains, upon which the rain-laden winds blow, from the New South Wales northern border to Thursday Island. The converse effect is exemplified on the north-west coast of Western Australia from the summer south-east trade winds. Here the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly winds, which skirt the southern shores, are responsible for the very reliable, although generally light, rains enjoyed by the south-western portion of Western Australia, by the south-eastern agricultural areas of South Australia, by a great part of Victoria, and by the whole of Tasmania.

(i.) *Factors determining Distribution and Intensity of Rainfall.*

(ii.) *Time of Rainfall.*

In preceding Year Books (see No. 6, pp. 72, 73, 74) some notes were given of the various factors governing the distribution, intensity and period of Australian rainfall.

(iii.) *Wettest and Driest Regions.* The wettest known part of Australia is on the north-east coast of Queensland, between Port Douglas and Cardwell, where three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 148 and 166 inches. The maximum and minimum falls there are:—Goondi, 241.53 in 1894 and 67.88 inches in 1915, or a range of 165.29 inches; Innisfail, 211.24 in 1894 and 69.87 inches in 1902, or a range of 141.37 inches; Harvey's Creek, 238.45 in 1901 and 80.47 inches in 1902, or a range of 157.98 inches.

On four occasions more than 200 inches have been recorded at Goondi, the last of these being in 1910, when 204.82 inches were registered. The record at this station covers a period of 30 years.

Harvey's Creek in the shorter period of 20 years has twice exceeded 200 inches, the total for 1910 being 201.28 inches.

The driest known part of the continent is about the Lake Eyre district in South Australia (the only part of the continent below sea level), where the annual average is but 5 inches, and where the fall rarely exceeds 10 inches for the twelve months.

The inland districts of Western Australia have until recent years been regarded as the driest part of Australia, but authentic observations taken during the past decade at settled districts in the east of that State shew that the annual average is from 10 to 12 inches.

(iv.) *Quantities and Distribution of Rainfall generally.* The departure from the normal rainfall increases greatly and progressively from the southern to the northern shores of the continent, and similarly also at all parts of the continent subject to capricious monsoonal rains, as the comparisons hereunder will shew. The general distribution is best seen from the map on page 73, shewing the areas subject to average annual rainfalls lying between certain limits. The areas enjoying varying quantities of rainfall determined from the latest available information are shewn in the following table:—

DISTRIBUTION OF AVERAGE RAINFALL.

Average Annual Rainfall.	N.S.W.	Victoria.	Queensland.	South Aust.	Northern Territory.	Western Aust.	Tasmania.	Commonwealth.

\* Over an area of 3030 square miles no records are available.

Referring first to the capital cities, the complete records of which are given on the following page, it is seen that Sydney with a normal rainfall of 48.33 inches occupies the chief place, Brisbane, Perth, Melbourne, Hobart and Adelaide following in that order, Adelaide with 21.05 inches being the driest. The extreme range from the wettest to the driest year is greatest at Brisbane (72.09 inches) and least at Adelaide (19.48 inches).

In order to shew how the rainfall is distributed throughout the year in various parts of the continent, the figures of representative towns have been selected. (See map on page 74.) Darwin, typical of the Northern Territory, shews that in that region nearly the whole of the rainfall occurs in the summer months, while little or nothing falls in the middle of the year. The figures for Perth, as representing the south-western part of the continent, are the reverse, for while the summer months are dry, the winter ones are very wet. In Melbourne and Hobart the rain is fairly well distributed throughout the twelve months, with a maximum in October in the former, and in November in the latter. The records at Alice Springs and Daly Waters indicate that in the central parts of Australia the wettest months are in the summer and autumn. In Queensland, as in the Northern Territory, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons.

On the coast of New South Wales, the first six months of the year are the wettest, with slight excesses in April and July; the averages during the last six months are fair and moderately uniform. In general it may be said that one-fourth of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches, the remaining three-fourths receiving generally from about 10 to 15 inches.

(v.) *Curves of Rainfall and Evaporation.* The relative amounts of rainfall and evaporation at different times through the year are best seen by referring to the graphs for a number of characteristic places. (See page 68.) It will be recognised at once how large is the evaporation when water is fully exposed to the direct rays of the sun, and to wind.

(vi.) *Tables of Rainfall.* The table of rainfall for a long period of years for each of the various Australian capitals affords information as to the variability of the fall in successive years, and the list of the more remarkable falls furnishes information as to what may be expected on particular occasions.

NOTE.—The above average Rainfall figures for Brisbane, Sydney, and Melbourne differ slightly from the mean annual falls given in the Climatological Tables on pp. 78-83, which are for a less number of years.

9. Remarkable Falls of Rain.—The following are the more remarkable falls of rain in the States of New South Wales, Queensland, Western Australia, Northern Territory, Victoria, and Tasmania, which have occurred within a period of twenty-four hours:—

#### HEAVY RAINFALLS, NEW SOUTH WALES, UP TO 1917, INCLUSIVE.

10. **Snowfall.**—Light snow has been known to fall even as far north, occasionally, as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons it has fallen simultaneously over two-thirds of the State of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter, snow covers the ground to a great extent on the Australian Alps for several months, where also the temperature falls below zero Fahrenheit during the night, and in the ravines around Kosciusko and similar localities the snow never entirely disappears.

The antarctic "V"-shaped disturbances are always associated with our most pronounced and extensive snowfalls. The depressions on such occasions are very steep in the vertical area, and the apexes are unusually sharp-pointed and protrude into very low latitudes, sometimes even to the tropics.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN MAXIMUM AND MINIMUM TEMPERATURE AND HUMIDITY IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

**EXPLANATION OF THE GRAPHS OF TEMPERATURE AND HUMIDITY.**—In the above graphs, in which the heavy lines denote 'temperature' and the thin lines 'humidity,' the fluctuations of mean temperature and mean humidity are shewn throughout the year. These curves are plotted from the data given in the Climatological Tables hereinafter. The temperatures are shewn in degrees Fahrenheit, the inner columns giving the corresponding values in Centigrade degrees. Humidities have not been obtained for Darwin, Daly Waters, and Alice Springs.

For the thin lines the degree numbers represent relative humidities, or the percentages of actual saturation (absolute saturation = 100).

The upper temperature line represents the mean of the maximum, and the lower line the mean of the minimum results; thus the curves also shew the progression of the range between maximum and minimum temperatures throughout the year. The humidity curves shew the highest and lowest values of the mean monthly humidity at 9 a.m. recorded during a series of years.

**INTERPRETATION OF THE GRAPHS.**—The curves denote mean monthly values. Thus, taking for example, the temperature graphs for Perth, the mean readings of the maximum and minimum temperatures for a number of years on 1st January would give respectively about 83° Fahr. and 62° Fahr. Thus the mean range of temperature on that date is the difference, viz., 21°. Similarly, observations about 1st June would give respectively about 66° Fahr. and 51° Fahr., or a range of 15°.

In a similar manner it will be seen that the greatest mean humidity, say for March, is about 66% and the least mean humidity for the month 46%; in other words, at Perth the degree of saturation of the atmosphere by aqueous vapour for the month of March ranges between 66% and 46%.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN RAINFALL AND MEAN EVAPORATION IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

(For Explanation see next page.)

**EXPLANATION OF THE GRAPHS OF RAINFALL AND EVAPORATION.**—On the preceding graphs thick lines denote rainfall and thin lines evaporation, and shew the fluctuation of the mean rate of fall *per month* throughout the year. The results, plotted from the Climatological Tables hereinafter, are shewn in inches (see the outer columns), and the corresponding metric scale (centimetres) is shewn in the two inner columns. The evaporation is not given for Darwin and Daly Waters.

**INTERPRETATION OF THE GRAPHS.**—The distance for any date from the zero line to the curve, represents the average number of inches, reckoned as per month, of rainfall at that date. Thus, taking the curves for Adelaide, on the 1st January the rain falls on the average at the rate of about four-fifths of an inch per month, or, say, at the rate of about  $9\frac{1}{2}$  inches per year. In the middle of June it falls at the rate of nearly 3 inches per month, or, say, at the rate of about 36 inches per year. At Dubbo the evaporation is at the rate of nearly  $11\frac{1}{2}$  inches per month about the middle of January, and only about  $1\frac{1}{2}$  inches at the middle of June.

TABLE SHEWING MEAN ANNUAL RAINFALL AND EVAPORATION IN INCHES AT THE PLACES SHEWN ON PRECEDING PAGE, AND REPRESENTED BY THE GRAPHS.

—	Rainfall.	Evapora- tion.	—	Rainfall.	Evapora- tion.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN BAROMETRIC PRESSURE FOR THE CAPITALS OF THE SEVERAL STATES OF THE COMMONWEALTH OF AUSTRALIA.

**EXPLANATION OF THE GRAPHS OF BAROMETRIC PRESSURE.**—On the above graphs the lines representing the yearly fluctuation of barometric pressure at the State capital cities are means for long periods, and are plotted from the Climatological Tables given hereinafter. The pressures are shewn in inches on about  $2\frac{1}{2}$  times the natural scale, and the corresponding pressures in centimetres are also shewn in the two inner columns, in which each division represents one millimetre.

**INTERPRETATION OF THE BAROMETRIC GRAPHS.**—Taking the Brisbane graph for purposes of illustration, it will be seen that the mean pressure on 1st January is about 29.87 inches, and there are maxima in the middle of May and August of about 30.09 inches.

Chart indicating the area affected and period of duration of the Longest Heat Waves when the Maximum Temperature for consecutive 24 hours reached or exceeded 90° Fah.

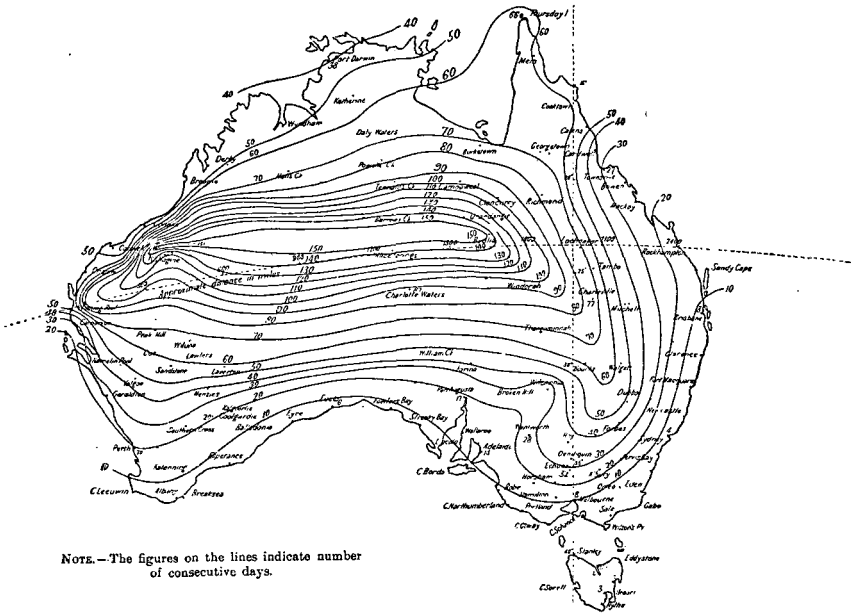

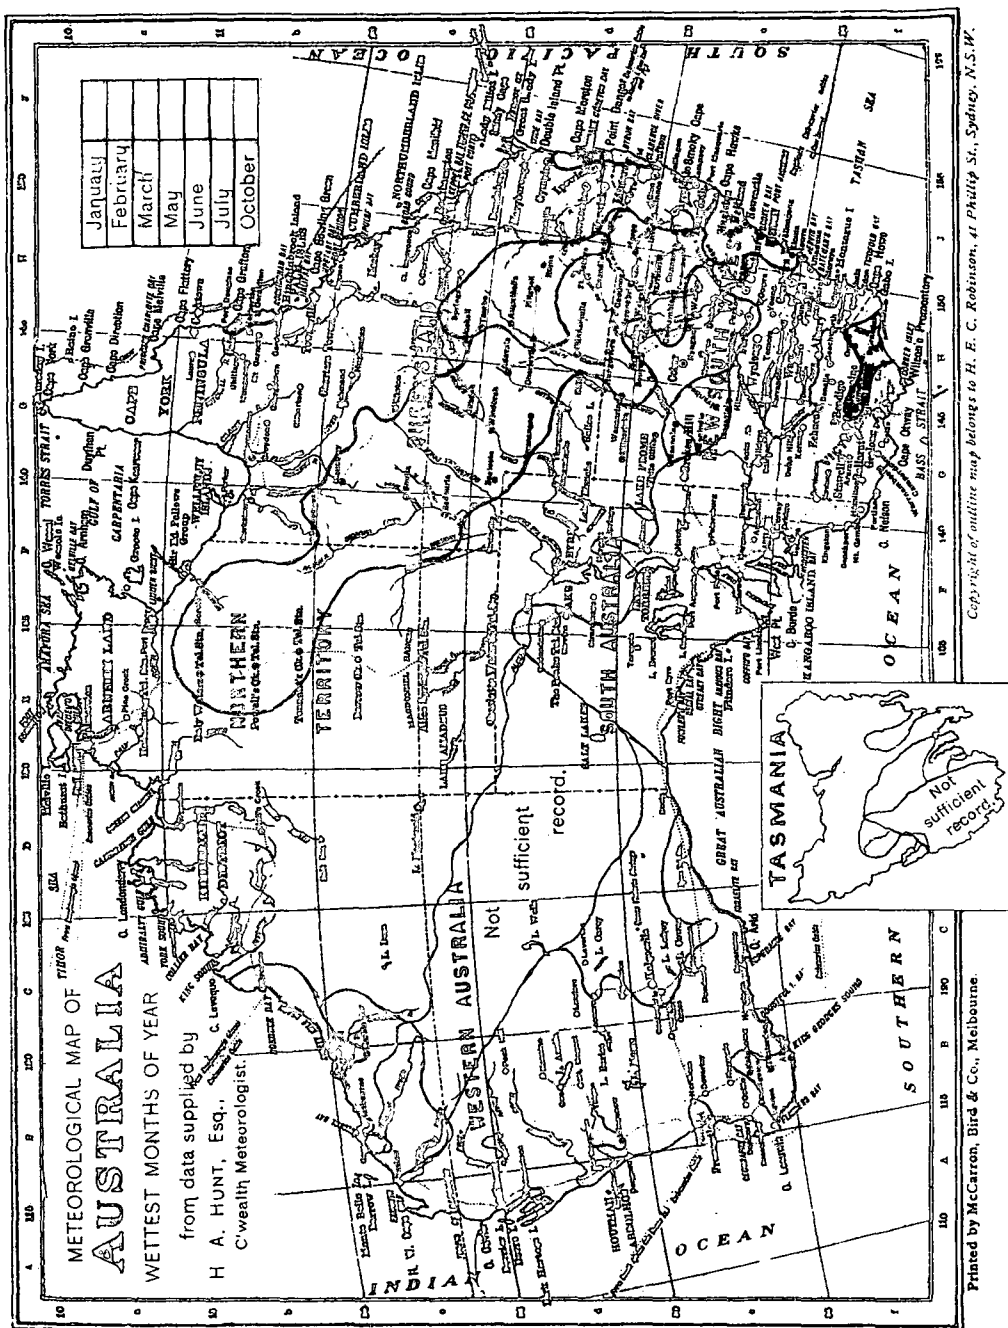

Diagram showing the greatest number of consecutive days on which the Temperature in the shade was over 100° and also over 90° at the places indicated.

The above are the meteorological sub-divisions adopted by H. A. HUNT, Esq., C'wealth Meteorologist.

#### EXPLANATION OF GRAPH.

The six continuous curves on the upper part of the diagram show the fluctuations of mean monthly temperatures of the Australian capitals from 1901 to 1909. The base of each small square denotes one month, and the vertical side  $2^{\circ}$  Centigrade or  $3.6^{\circ}$  Fahrenheit.

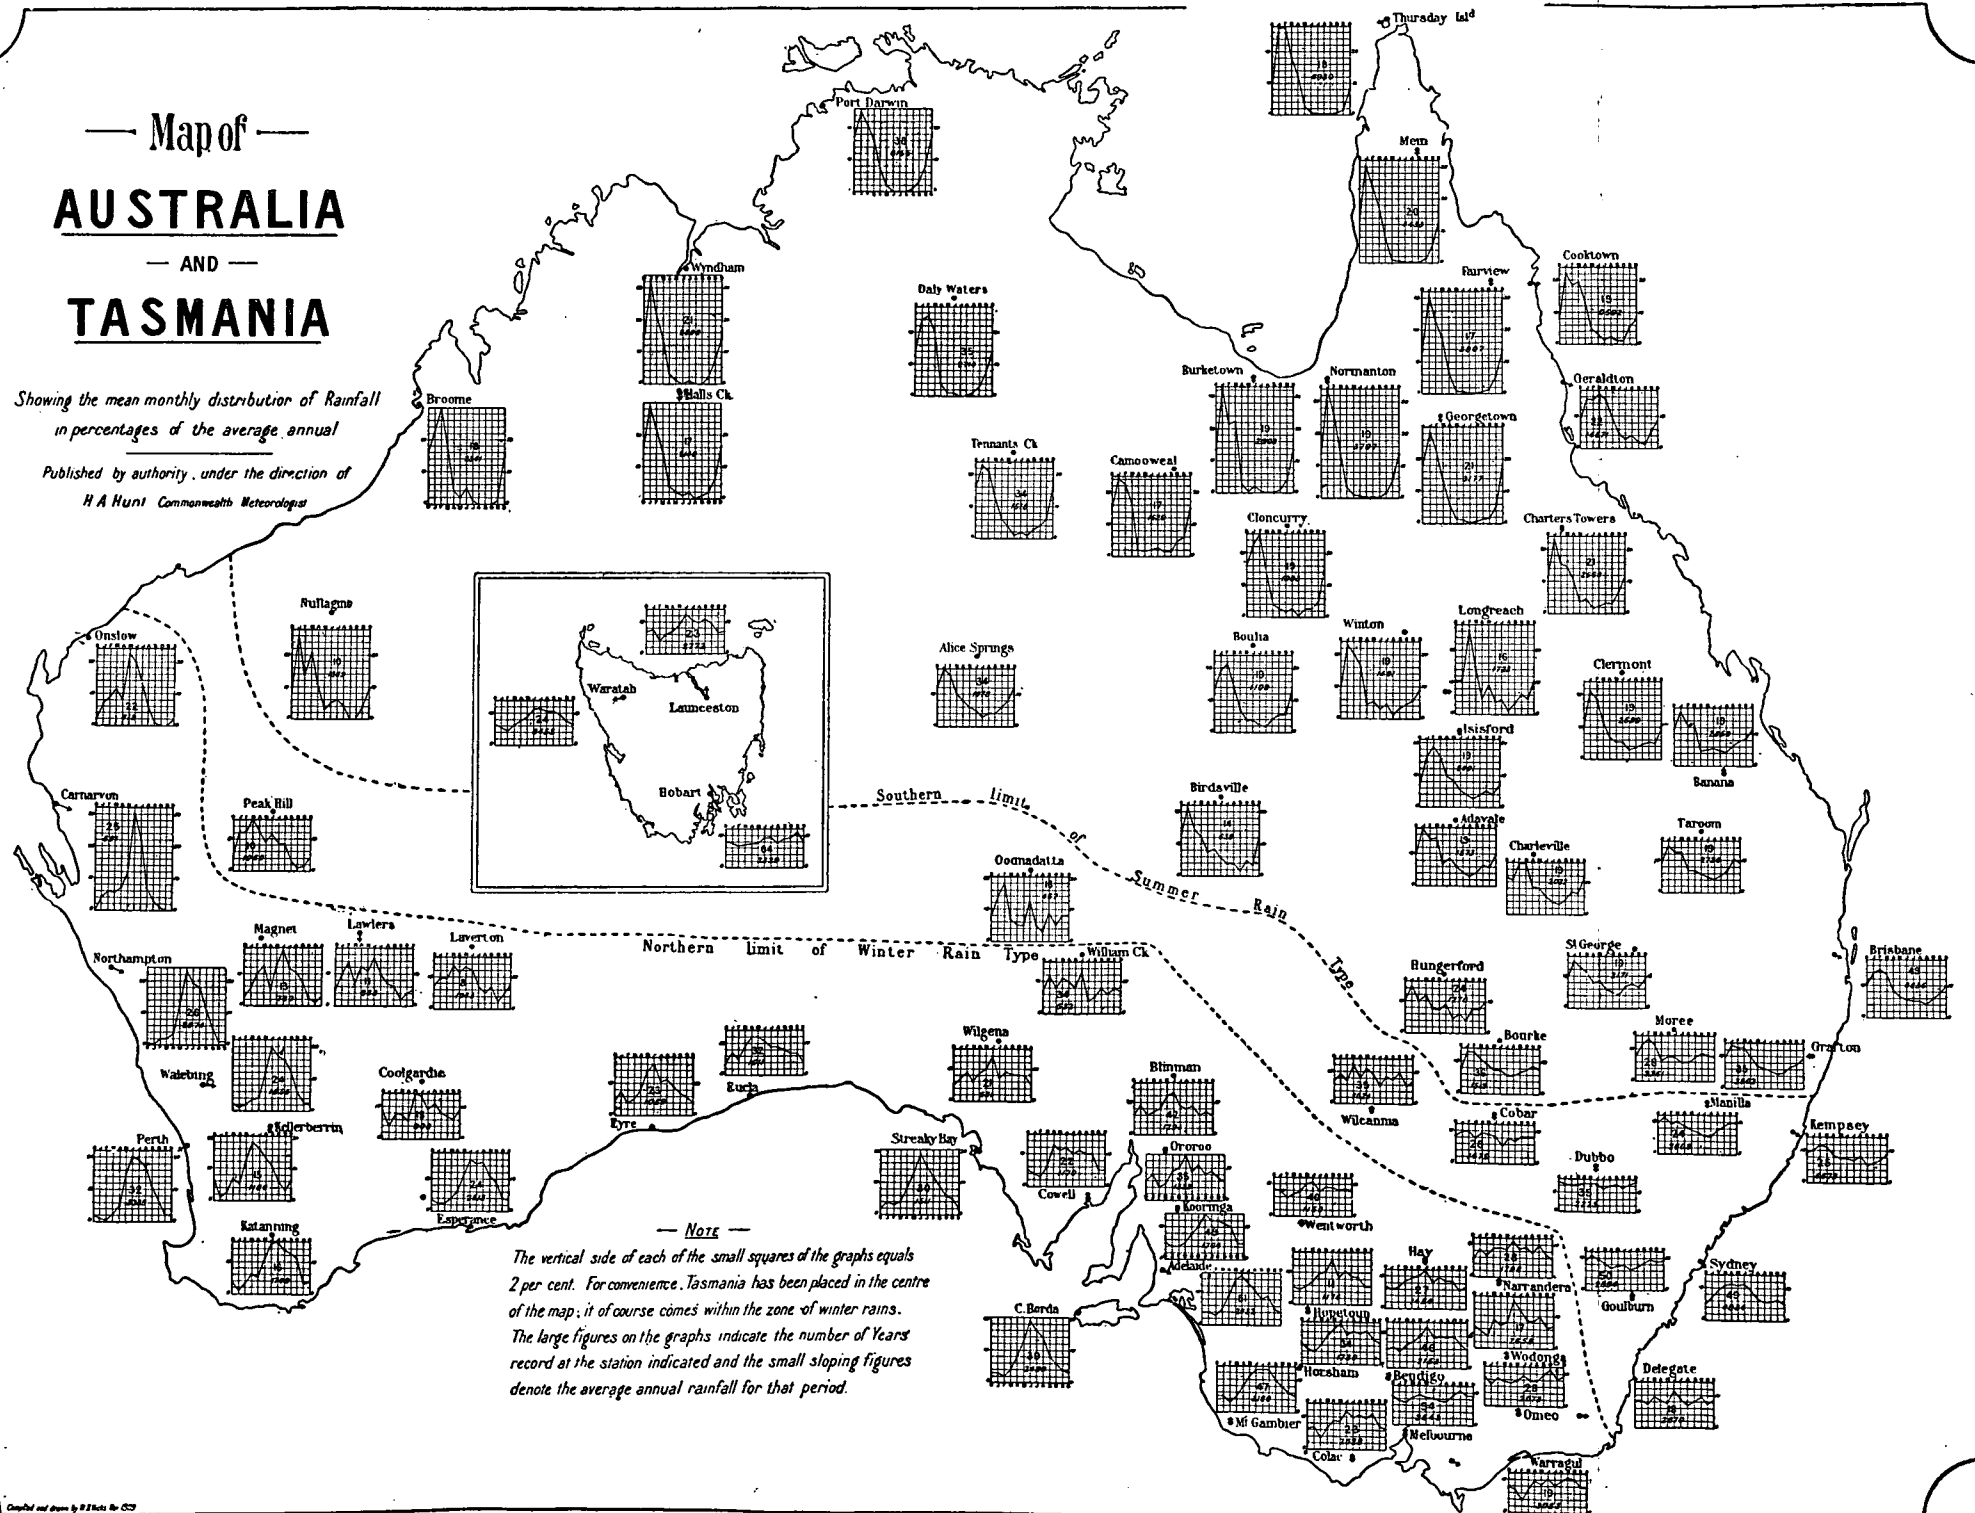

The six curves in lower portion of the diagram similarly show the fluctuations of the mean annual temperatures, from 1871 in the case of Adelaide, Sydney and Melbourne, from 1883, 1887 and 1897 in the case respectively of Hobart, Brisbane and Perth. The base of each rectangle represents one year, and the vertical side  $0.3^{\circ}$  Centigrade or  $0.54^{\circ}$  Fahrenheit.

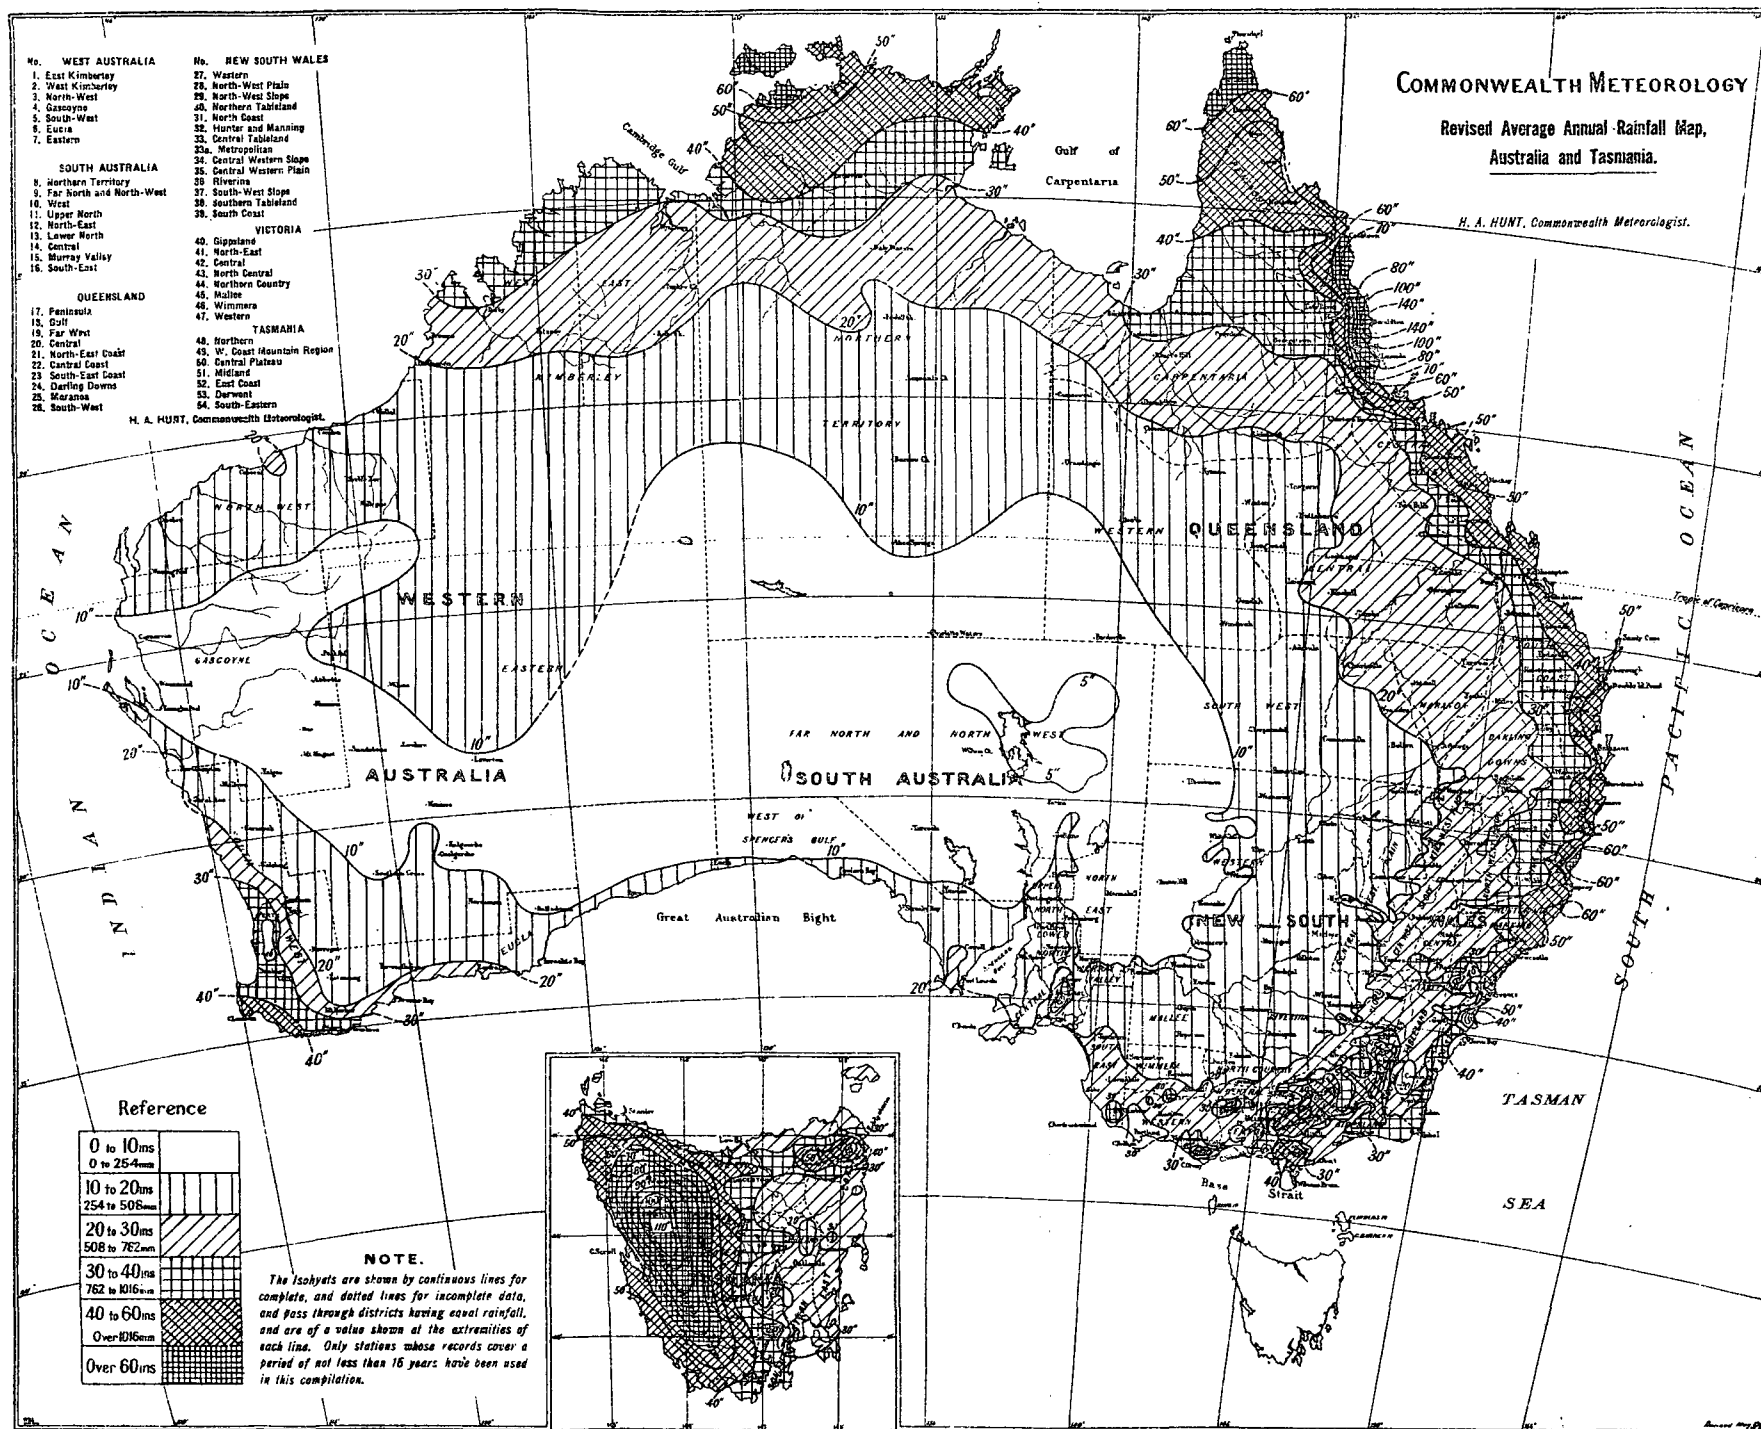

The map shows the areas affected by given amounts of annual rainfall, and is elsewhere given.

 H A Hunt Commonwealth Meteorologist

11. **Hail.**—Hail falls throughout Australia most frequently along the southern shores of the continent in the winter, and over south-eastern Australia during the summer months. The size of the hailstones generally increases with distance from the coast, a fact which lends strong support to the theory that hail is brought about by ascending currents. Rarely does a summer pass without some station experiencing a fall of stones exceeding in size an ordinary hen-egg, and many riddled sheets of light-gauge galvanised iron bear evidence of the weight and penetrating power of the stones.

Hail storms occur most frequently in Australia when the barometric readings indicate a flat and unstable condition of pressure. They are almost invariably associated with tornadoes or tornadic tendencies, and on the east coast the clouds from which the stones fall are generally of a remarkable sepia-coloured tint.

12. **Barometric Pressures.**—The mean annual barometric pressure (corrected to sea-level and standard gravity) in Australia varies from 29.80 inches on the north coast to 29.92 inches over the central and 30.03 inches in the southern parts of the continent. In January the mean pressure ranges from 29.70 inches in the northern and central areas to 29.91 inches in the southern. The July mean pressure ranges from 29.90 inches at Darwin to 30.12 inches at Alice Springs. Barometer readings, corrected to mean sea-level, have, under anticyclonic conditions in the interior of the continent, ranged from 30.81 inches to as low as 28.44 inches. This lowest record was registered at Townsville during a hurricane on the 9th March, 1903. The mean annual fluctuations of barometric pressure for the capitals of Australia are shewn on page 69.

13. **Wind.**—Notes on the distinctive wind currents in Australia were given in preceding Year Books (see No. 6, page 83) and are here omitted to save space.

14. **Cyclones and Storms.**—The “elements” in Australia are ordinarily peaceful, and although severe cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months the southern shores of the continent are subject to cyclonic storms, evolved from the V-shaped depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Straits, including the coast line of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these cyclones are experienced in their northern half, that is, in that part of them which has a north-westerly to a south-westerly circulation.

Occasionally the north-east coast of Queensland is visited by hurricanes from the north-east tropics. During the first four months of the year these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve of south-westerly direction. Only a small percentage, however, reach Australia, the majority recurring in their path to the east of New Caledonia.

Very severe cyclones, popularly known as “Willy Willies,” are peculiar to the north-west coast of Western Australia from the months of November to April inclusive. They apparently originate in the ocean, in the vicinity of Cambridge Gulf, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive, causing great havoc amongst the pearl-fishers. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded in 24 hours at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the northern interior of Western Australia from similar storms.

Some further notes on severe cyclones and on "Southerly Bursters," a characteristic feature of the eastern part of Australia, will be found in previous issues of the Year Book (see No. 6, pp. 84, 85, 86).

**15. Influences affecting Australian Climate.**—Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes therein, however, have taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, the mean temperature of Sydney shews a rise of two-tenths of a degree during the last twenty years, a change probably brought about by the great growth of residential and manufacturing buildings within the city and in the surrounding suburbs during that period. Again, low-lying lands on the north coast of New South Wales, that originally were seldom subject to frosts, have, with the denudation of the surrounding hills from forests, experienced annual visitations, the probable explanation being that, through the absence of trees, the cold air of the high lands now flows, unchecked and untempered, down the sides of the hills to the valleys and lower lands.

(i.) *Influences of Forests on Climate.* As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalising one; thus, especially in equatorial regions and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of their shade temperatures, by altering the extent of radiating surface, by evaporation, and by checking the movement of air. While decreasing evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain, and the washing away of surface soil. Thus, when a region is protected by trees, steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies," watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the inland rivers. Thus, the River Murray, which has never been known to run dry, derives its steadiness of flow mainly through the causes above indicated.

(ii.) *Direct Influences of Forest on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others contend the opposite.

Sufficient evidence exists, however, to establish that, even if the rainfall has not increased, the beneficial effect of forest lands in tempering the effects of the climate is more than sufficient to disclose the importance of their protection and extension.

It is the rapid rate of evaporation, induced by both hot and cold winds, which injures crops and makes life uncomfortable on the plains. Whether the forest aids in increasing precipitation there may be doubt, but nobody can say that it does not check the winds and the rapid evaporation due to them.

Trees as wind-breaks have been successfully planted in central parts of the United States, and there is no reason why similar experiments should not be successful in many parts of our treeless interior. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.

In previous issues some notes on observations made in other countries were added (see Year Book No. 6, pp. 86 and 95).

**16. Comparison of Rainfalls and Temperatures.**—For the purpose of comparison the following lists of rainfalls and temperatures are given for various important cities throughout the world, for the site of the Federal capital, and for the capitals of the Australian States:—

### COMPARISONS OF RAINFALLS AND TEMPERATURES OF CITIES OF THE WORLD WITH THOSE OF AUSTRALIA.

## § 7. The Climatic Factors Influencing Settlement in Australia.\*

1. **Introduction.**—There is an impression among some Australians that the climate of the continent does not vary to any great extent from one end to the other. Of all the large land masses, Australia has probably the least average elevation and the most unbroken coastline; both of these conditions make for uniformity. But the area of the continent is very large, and it lies in one of the most variable climatic belts on the earth's surface. It would, therefore, be a serious error to judge the Australian climate only by the southern types thereof, with which alone, probably some three-quarters of the inhabitants are personally familiar.

It will be useful for comparison to glance for a moment at the better appreciated diversity of climates in the region lying between Britain and India. Facing the almost permanent westerly gales is the rugged west coast of Ireland. It receives a perpetual drenching from the moisture-laden winds, and the result is that Western Ireland has large areas of bog land and much deciduous forest, but is too wet for cereals. Somewhat similar conditions obtain in Western Tasmania. (See Fig. 1.)

Passing further to the south-east the Mediterranean lands are reached. Here is an absence of deciduous trees, their place being taken largely by evergreens. A sharply-marked winter rainfall, with considerable periods of drought, is experienced. The same features are characteristic of most of southern Australia. South of the Mediterranean the desert regions of the Sahara are bordered by a grassland belt watered by scanty winter rains, and these conditions also characterise the region of the new Trans-Australian railway. To the east of the Mediterranean, and somewhat remote from the sea, are the Steppes of the Caspian. These are to some extent paralleled by the Australian Riverina—though the latter is warmer.

The true desert of Sahara, with a rainfall below five or six inches, has its counterpart in the region around Lake Eyre, and perhaps in Western Australia. Nearer the Equator are the Savanna regions, grass lands watered by scanty summer rain. The Sudan is of this type, and it is represented in Australia by the inland regions along the Tropic.

The survey has now reached the tropical regions of India, which have a good monsoonal rainfall. Here a distinction should be made between the centre of the Peninsula with its well-marked winter drought, and the East coast. The former agrees in the matter of rainfall with Northern Australia, while the Madras coast resembles the North Queensland coast with a much heavier and more uniform rainfall.

In addition to the eight climatic regions already noted, there is a special type along the coast of New South Wales which differs somewhat from any so far touched upon. Its homoclines are in China and Uruguay.

It would be quite proper to include Papua and Macquarie Island in a survey of the climate of the Commonwealth. Macquarie Island lies in 55° S. latitude, to the south of Tasmania, and its climate resembles that of Iceland. Hence one could extend the scale through the whole of the regions possessing tropical, temperate and sub-polar climates.

There can be little doubt that climate is the major factor in determining the permanent settlement of the various regions of the earth. It controls agriculture and grazing, which in their turn largely determine manufacturing industries. It controls comfort and health—very potent factors in the spread of white civilisations. In fact, were it not for certain valuable mineral deposits, one would find that practically all the main centres of white settlement could be defined in terms of temperature, humidity and rainfall.

---

\* Contributed by Griffith Taylor, D.Sc., B.E., B.A., F.G.S., F.R.G.S., Physiographer, Commonwealth Meteorological Service. Prepared with the approval of the Commonwealth Meteorologist, H. A. Hunt, Esq., F.R.Met.Soc., who has generously placed the resources of the Bureau of Meteorology at the disposal of the author.

Similar controls, no doubt, operate in connection with the other races. Probably the black race flourishes within narrower limits, and the yellow race within wider limits than the white race; but a very short survey will shew that the Australian Commonwealth contains regions akin to those inhabited by types of each of the great races of mankind.

Thus there are in Australia, as shewn by Fig. 1, climatic factors such as are associated with all the following peoples and products:—

Nordic races as in parts of Ireland—tall, fair-haired men interested in pigs, potatoes and peat. Shorter Alpine "roundheads," as in Central France, concerned with sheep and cattle. Short dark Mediterranean people, as in Italy, busy with wheat, olives and wine. In the irrigated districts of Egypt are the Copts growing rice and cotton; while in the drier regions near by are the Syrians, concerned *inter alia* with tobacco and goats. In the true desert is the Tuareg, whose environment has made him a nomad. Belonging also to the "white race" are the Hindus of the North of India, who grow cotton, rice, jute, and oilseeds.

The yellow Kirghiz of the Caspian Steppes are pastoral nomads whose southern lands are becoming important cotton areas. Corresponding to the New South Wales coast is Eastern China with tea, maize and sugar cane grown by pure Mongolians.

The Savannas of the Sudan are peopled by negroes interested in cattle, millet and various gums. The South of India, containing dark Dravidians of uncertain origin, produces coffee, tea and tropical oilseeds.

Here, indeed, is a "diversity of creatures," whose whole scheme of life is largely determined by their environment. In Australia the environment is as diverse, and it is logical to assume that it will exert a potent, if slow, influence on Australians.

**2. Temperature.**—Early in the study of climatology it was discovered that the Southern Hemisphere is cooler than the Northern. This fact has been taken by many people to imply that Tropical Australia is much cooler than similarly situated regions in other continents. Moreover, it has been stated that the heat equator is confined to the Northern Hemisphere, and hence that only a mere coastal fringe along the north coast can properly be assigned to Tropical Australia.

The above general statements are true—but the deductions are wrong, for the reason that Australia is an exception to both rules. There is no mysterious virtue about the Southern Hemisphere—it is merely the great preponderance of ocean which keeps its average temperature low. But the few large land masses—of which Australia is one—are hot enough, as it is only too easy to shew.

TABLE I.—LATITUDE AND TEMPERATURE.

10° ...	79.5	77.0	82	
15° ...	79.4	75.7	81	
20° ...	78.0	73.0	76	
25° ...	74.7	69.7	70	} Temperate.
30° ...	68.5	65.4	66	
35° ...	63.0	59.4	61	
40° ...	57.2	53.2	55	

\* From Hann.

Note.—The last column shews smoothed temperatures along longitude 135° E., which fairly represent the "continental" portion of Australia.

Hence we see that Tropical Australia is not only hotter than the average for the Southern Hemisphere, but is hotter than the average for the Northern Hemisphere. It is indeed much hotter than any land between us and the North Pole. It is, therefore, obvious that the heat equator must be drawn through Northern Australia.

There are two further reasons why Australian climates have not been properly estimated in the past.

Almost all maps shewing world temperatures are so constructed that the effect of elevation is removed by reducing the temperature readings to sea level. Thus authoritative maps shew the city of Mexico as having an average annual temperature of 80° F., much the same as Broome, in the same latitude. But actually the average temperature of Mexico is under 60° F.; and the same applies to many other tropical areas. As will be seen later, no continent has so small a proportion of highlands as Australia.

Furthermore, if a tabulation is made of those localities having an average annual temperature over 84° F., it will be found that there are only four such regions of greatest heat recorded in the authoritative work by Hann.

TABLE II.—HOTTEST REGIONS OF THE GLOBE.

Region.			Average Temperature.	Average Rainfall.
1. Timbuktú and vicinity	...	...	84° F.	0-10 inches
2. Massowah to Khartum	...	...	86° F.	10-20 "
3. Tinnevely in South India	...	...	84.3° F.	40-60 "
4. Wyndham in North-west Australia	...	...	84.6° F.	40-60 "

If the moistness of the heat be considered, it will be seen that Wyndham has an unenviable position among the world's climates—at any rate in the rainy season.

**3. Effect of Elevation.**—Large portions of the British tropical areas are, luckily, situated at high altitudes. Thus, in Rhodesia approximately 90 per cent. (some 400,000 square miles) is over 2000 feet above sea level. This lowers the temperature by about 7° F., and is a vital factor in regard to settlement. It will be interesting to see how the elevation affects settlement in Australia. In the Tropics there are only three areas which are worth considering.

TABLE III.—TROPICAL HIGHLANDS IN AUSTRALIA.

Tropical Highlands.*	Approximate Area over 2000 feet.	Per cent. of State or Territory.
A. Atherton Tableland, Queensland	12,000 sq. miles	2
B. Macdonnell Ranges, N. Territory	14,000 "	2.6
C. Fortescue River area, W. Australia	11,000 "	1

\* The index letters correspond with those on Fig. 8.

Adding a few much smaller areas it will be found that only four per cent. of Tropical Australia is high enough to benefit in this respect. The result is that no injustice will be done if the Tropic of Capricorn be taken as truly representing the southern limit of the tropics in Australia.

As regards temperate Australia, there are but few noteworthy features in the distribution of temperature. Only in the east and south-east are the settled highlands extensive enough to be important.

The following tables give approximate areas for the temperate regions above 2000 feet in Eastern Australia. These all have an adequate rainfall:—

TABLE IV.—EASTERN TEMPERATE HIGHLANDS.

Well-watered Highlands.*	Approximate Area over 2000 feet.	Rainfall.
D. Darling Downs and Tambo Downs, Queensland ... ..	2,300 sq. miles	30 inches
E. New England Plateau, N. S. Wales, including Macpherson Ranges ...	23,500 "	35 "
F. Blue Mountain Plateau, N. S. Wales	14,800 "	30 "
G. Monaro Plateau, N. S. Wales ...	13,800 "	25 "
H. Victorian Highlands, Victoria ...	7,700 "	50 "
J. Tasmanian Highlands ... ..	4,400 "	40 "
	66,000 "	...

\* The index letters correspond with those on Fig. 8.

Of less important temperate highlands—all situated in regions of low rainfall—there are several in other States.

TABLE V.—DRY TEMPERATE HIGHLANDS.

Dry Highlands.*	Approximate Area.	Estimated Rainfall.
K. Flinders Range, S. Australia ...	1,300 sq. miles	10 inches.
L. Musgrave Ranges, S. Australia ...	6,300 "	10 "
M. Macdonnells (temperate), N. Territory	7,600 "	9 "
N. Wiluna Highlands, W. Australia ...	11,600 "	9 "
O. Ashburton Highlands, W. Australia...	21,200 "	9 "
	48,000 "	...

\* The index letters correspond with those on Fig. 8.

There are a few other small areas, such as the Stirling Range, Western Australia, which average less than 1000 square miles each—so that the total highland areas of Australia may be summed up as follows:—

TABLE VI.—AUSTRALIAN HIGHLANDS OVER 2000 FEET.

Tropical—Dry ... ..	25,000 sq. miles	} 40,000 sq. miles
Wet ... ..	15,000 "	
Temperate—Dry ... ..	48,000 "	} 114,000 "
Wet ... ..	66,000 "	
Total ... ..	154,000 "	

This is a very small proportion (about five per cent.) of the total area of the Commonwealth.

4. **Range of Temperature.**—The range of temperature during the year depends on two factors; distance from the coast, and distance from the Equator. Both of these operate to increase the range. There is nothing unusual in the range of temperature in Australia, but it has considerable bearing on the health and comfort of the inhabitants, and so deserves a brief mention. (See Fig. 2.) The isopleth for a range of 15° F. almost agrees with the southern coastline; while the 20° isopleth runs along the east from Mackay to Gabo Island, and along the west from Perth to Broome. The north coast is bathed by tropical seas and the range is very little, usually about 10°.

The highest range occurs in a central belt between Bourke and Wiluna, at each of which the temperature of the coldest month is  $33^{\circ}$  degrees below that of the hottest month. The other isopleths run in concentric fashion around this central belt of high range.

In the cooler regions an equable climate is often desirable from the point of view of health. The following table shews many favourable localities:—

TABLE VII.—TEMPERATE LOCALITIES WITH LOW RANGE.

Locality.	Range.
Breaksea Island, Western Australia ...	$11.0^{\circ}$ F.
Cape Leeuwin, " ...	$11.8^{\circ}$ "
Cape Sorell, Western Tasmania ...	$12.0^{\circ}$ "
Cape Otway, Victoria ...	$12.3^{\circ}$ "
Wilson's Promontory, Victoria ...	$13.8^{\circ}$ "
Robe, South Australia ...	$13.9^{\circ}$ "
Gabo Island, Victoria ...	$14.4^{\circ}$ "

} Difference between  
average temperature  
of hottest month and  
average temperature  
of coldest month.

In the tropics, however, a large range is always advantageous, and this is only experienced away from the coast. (As will be seen, the humidity unfortunately follows the same rule.) Hence, during the cooler months of the year, in the inland tropical regions the climate is delightful. But on the north coast the range is reduced to a minimum, as the following table shews:—

TABLE VIII.—TROPICAL LOCALITIES WITH LOW RANGE OF TEMPERATURE.

Locality.	Range.
Thursday Island ... ..	$5.5^{\circ}$ F.
Darwin ... ..	$8.2^{\circ}$ "
Cooktown ... ..	$9.9^{\circ}$ "
Cairns ... ..	$11.9^{\circ}$ "

Almost all the region north of  $18^{\circ}$  S. latitude (Broome to Daly Waters to Mackay) experiences a range of less than  $18^{\circ}$  F.

5. **Humidity.**—Humidity is an element which requires somewhat more elaborate apparatus for recording purposes than do temperature and rainfall, hence it is not so generally recorded. However, the Commonwealth has a very well distributed corps of observers, and Australia is, in consequence, one of the first continents to be adequately mapped in this respect. (See Fig. 3.)

MEAN MONTHLY HUMIDITY.

Fig. 3.

If the relative humidity for each of the twelve months be plotted for Australia, it is found that the isopleths are concentric, and more or less parallel with the coastline. The "centre of minimum humidity" moves north and south with the sun, being near Powell's Creek, Northern Territory, in June, and in higher latitudes in summer. There seem indeed to be two summer "centres," one just north-east of Lake Eyre, and the other north-east of Wiluna. These districts have long been known as Sturt's Stony Desert and Gibson's Desert respectively, and it is probable that the association is by no means accidental.

The two extreme months are June, when the general humidity is greatest, and October, when it is least. Luckily, in Australia by far the greatest area of high humidity occurs in winter in the cooler southern portion of the continent. (This is, of course, directly related to the fact that the southern rains occur chiefly in winter.) Here the high humidity has no harmful effect on the population, and may be beneficial to crops.

There is, unfortunately, a season of high humidity in the tropics, and it is this which is of great interest in considering the effect of climate on settlement. It is usually granted that the tropical regions having, in the warm season, a mean monthly humidity exceeding seventy per cent. are distinctly uncomfortable to live in, even if this be not positively injurious to the stamina of the race.

Considering the six hottest months only (from November to April, inclusive), the following tropical stations, together with the intermediate areas, are the most humid. All occur along the north or north-east coast:—

TABLE IX.—HIGH RELATIVE HUMIDITY IN AUSTRALIAN SUMMER.

Locality.	Nov.	Dec.	Jan.	Feb.	March.	April.	Average Summer.
	%	%	%	%	%	%	%
Broome ...	59	67	71	72	66	56	65
Wyndham ...	62	65	68	69	65	50	63
Darwin ...	67	71	77	79	75	70	73
Thursday Island	67	71	82	83	85	77	77
Cairns ...	69	71	76	75	74	76	73
Townsville ...	69	73	73	73	71	67	71
Brisbane ...	59	62	66	70	72	73	67
Sydney ...	67	67	70	72	75	77*	71*

\* In April Sydney is cool enough to nullify the high humidity.

6. **Rainfall.**—There is no doubt that rainfall is the chief factor governing settlement in Australia as in other temperate regions of the world. In the United States, the relation between the 20-inch isohyet and the population isopleth is striking. All to the east (over twenty inches) has over six persons per square mile, almost all to the west (under twenty inches) has less than two persons per square mile.

The average annual rainfall map† is now fairly complete except in the central belt across Western Australia, where rains are very variable and records short or wanting. But this map alone gives a very incomplete statement of the value of the rains. Thus, each of the four following stations has a rainfall of about fifteen inches per year; but the settler would make a grave mistake if he assumed that the rains were all of the same type:—Roebourne (lat. 21°) and Northam (lat. 32°) in Western Australia, Tennant's Creek (lat. 20°) in Northern Territory, and Cobar (lat. 32°) in Central New South Wales, have all annual totals of fifteen inches. None of these is debarred from settlement by excessive heat or dryness, but two of them will never support a large population.

The Roebourne region is marked by the most unreliable rainfall in Australia. In 1891 it received only 0.13 inches, while in 1900 there fell 42 inches. Tennant's Creek is chiefly characterised by a totally dry period of seven months, which extends from April to

† See article by H. A. Hunt, Esq., F. R. Met. Soc., Commonwealth Meteorologist, in this Year Book p. 56.

October. Cobar receives its fifteen-inch rainfall spread out almost uniformly through the year. Northam, Western Australia, obtains practically all of it during the wheat period, and is consequently a much more important farming region than Cobar, which is only barely within the dry-farming area.

It is, therefore, obvious that the season at which the rain occurs, and the certainty of its occurrence, are matters as important as the total amount. Hence it is appropriate to base the classification of the climatic regions on a consideration of these factors.

**7. Rain Reliability.**—From the previous section it will be seen that in some regions of Australia the rainfall is more reliable than in others—quite irrespective of the total amounts. Thus, the twenty inches that the wheat farmer can expect to receive with some certainty in the Katanning district, Western Australia, is much more valuable than the twenty inches which may fall in the course of a few days at Wiluna, Western Australia.\* To obtain the rain reliability map shewn in Fig. 4 the following procedure was adopted:—

A table of annual rainfalls for twenty years (1891-1910) was consulted. At each of the localities listed the departures from the normal rainfall were obtained. These departures (ignoring sign) were then averaged and the result expressed as a percentage of the total rainfall. Thus (taking a striking example), the average rainfall at Onslow, Western Australia, is about eight and a-half inches, but it has varied from one inch in 1896, to twenty-seven inches in 1900. The average of all such departures is five inches, and this is inserted on the map (as a percentage of eight and a-half inches) as sixty per cent.

The map shews two "poles." Near Perth, Western Australia, is the most reliable region, where a variation of less than ten per cent. from the average is all that is likely. All along the south coast the variation is of the order of fifteen per cent., and thence becomes greater as one proceeds north and north-west. The maximum variation or least reliability, occurs at Onslow, sixty per cent., and Charlotte Waters, fifty-seven per cent.

Most of the north coast shews a variation of twenty per cent., or moderate reliability, and the same is true for the east coast. A region of unexpected unreliability is the Barkly Tableland, which seems to vary by about forty-five per cent. In fact, all the cooler portions of the Northern Territory have a very unreliable, as well as a low, rainfall; and this chart certainly indicates that agriculture without irrigation will always be a risky speculation anywhere in the inland portions of the Northern Territory and of Queensland.

It explains, also, why a low average rainfall of ten inches in Swanland, south-west Western Australia, and Eyre's Peninsula is able to give better crops than ten inches in Victoria or New South Wales. It is much more to be counted on in the south-west than in the south-east.

It is to be noted that in the arid interior receiving less than ten inches per year the warmer northern portion has a much more erratic rainfall than the southern cooler portion. Since, moreover, evaporation is so much greater in the northern moiety, this leads to the vegetation and pasture being less scanty in the south than it is along the same isohyet in the north.

**8. Rain Regions.**—Two further rain boundaries deserve discussion. The chief is of course that separating the region of winter rains from the region of summer rains.† (Fig. 5.) The winter rains are, speaking generally, associated with the westerly winds of the Antarctic depressions. These latter Lows travel eastwards along tracks which depend on the season, i.e. on the declination or the apparent track of the overhead sun. They affect Australia chiefly in winter.

## CHARACTERISTIC CLIMOGRAPHS ILLUSTRATING IMPORTANT CLIMATIC TYPES.

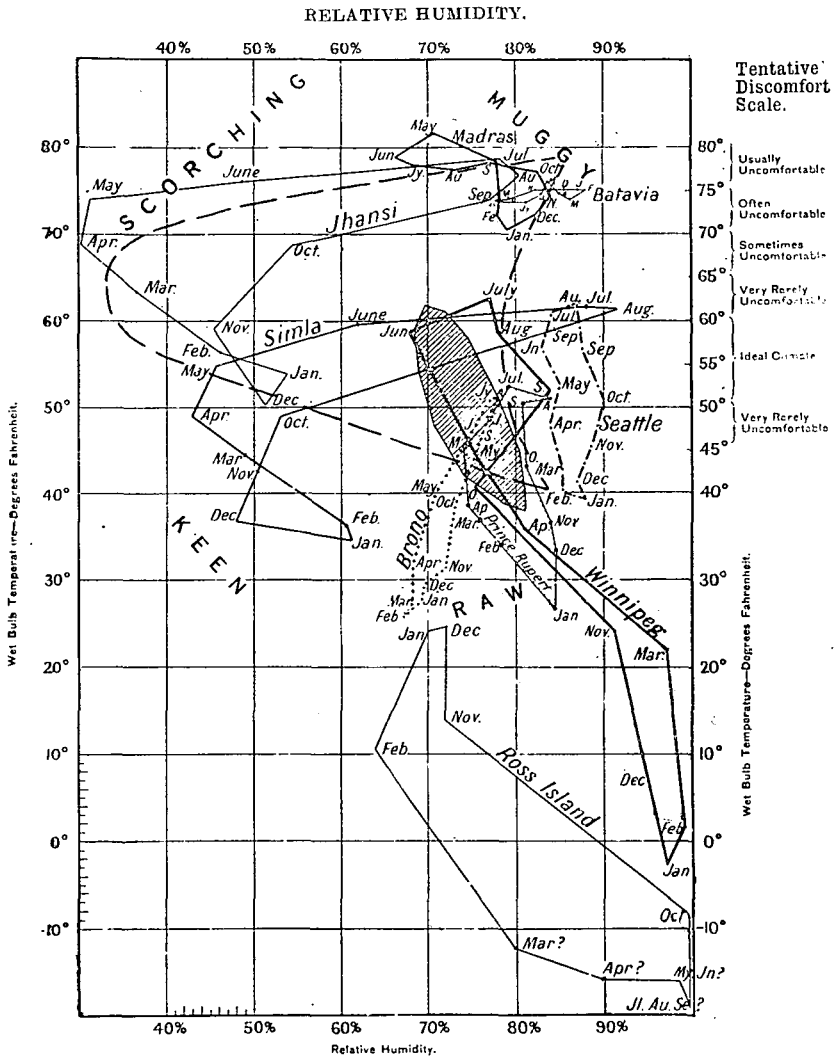

Fig 9

# TYPICAL CLIMOGRAPHS FOR AUSTRALIA.

The empirical boundary between arid and moist regions is given. (London and Berlin added for comparison.)

NOTE.—The shaded figure is the composite white race climograph based on twelve typical cities.  
Fig. 10.

In the same way the northern rains are largely due to the tropical cyclones which hover over northern Australia when the sun is overhead in the tropics, i.e. in summer. The northern summer rain-controls extend, however, barely as far south as Oodnadatta, South Australia, while the southern winter rain-controls normally extend north approximately to Farina, South Australia. Hence the great arid region of Australia is in the broad belt only occasionally favoured by either of these beneficial controls. This arid area extends from North-west Cape to Broken Hill, and includes thirty-seven per cent. of the area of the continent.

The dominating winds in this arid stretch have an easterly component, and, towards the north, merge of course into the permanent South-east Trade Winds. In the interior and in the western lands it is typically a drying wind, but in the east it blows from sea to land, and contributes largely to the heavier eastern rainfall. At the same time there is a special series of tropical storms which swing down the east coast from the north in autumn and winter, and give its definite character to that region.

Hence, speaking generally, there are four major rainfall regions. The summer rain region in the north, the winter rain region in the south, the uniform rain region in the east, and the arid region in the centre and middle west.

The uniform region may be defined as that which receives over one inch per month through eight months in the year. This uniform portion includes all east of a line from Cairns south to Wentworth, and thence west to Adelaide, and Bunbury, Western Australia. This region also includes almost all the timber areas in Australia, which are largely determined by the uniformity of the rain. Along these coasts, moreover, are the only regions where the evaporation is balanced by the rainfall. Hence the heavy tropical rains of the Northern Territory do not produce timber forests, for the six months' drought in winter prevents the growth of true tropical forests.

Fig. 5 shows how the rainfall varies in amount in season, in uniformity, and in reliability. Thus, considering rainfall alone, one can usefully distinguish seven regions, which may be arranged in order of their value for settlement somewhat as in the following table:—

TABLE X.—MAJOR RAINFALL REGIONS.

Class.	Sub-class.	Chief Localities.	Chief Products.
I. Uniform ...	1. With winter maximum	Riverina, Victoria. Tasmania, Albany	Timber, dairies, farming, sheep, wheat, vines.
.. ...	2. With summer maximum	Eastern Queensland, North-east of New South Wales*	Farms, sugar, sheep, cattle; also timber, dairies and sugar on coast.
II. Seasonal, but reliable	3. Moderate winter type	Swanland, W. Australia† ...	Wheat, sheep, vines.
..	4. Summer type ...	Kimberley, W. Australia and Coastlands, N. Territory	Cattle.
..	5. Arid winter type ...	Coolgardie to Broken Hill ...	Sheep.
III. Erratic ...	6. Summer only ...	Pilbarra, W. Australia, Macdonnells, N. Territory, Western Queensland	Sheep and Cattle.
.. ...	7. Arid ...	Central W. Australia and Inland S. Australia	Relatively empty, a few sheep and cattle stations only.‡

\* Type 3a (on Fig. 5) is too erratic to be classed with type 2. † The temperate and well-watered south-west corner of Western Australia. ‡ Mining is ignored.

**9. Climate and Production.**—The control of wheat and of cattle and sheep-raising by rainfall and temperature is considered very fully in Meteorological Bulletin No. 11,\* to which the reader is referred. On the maps in that bulletin it is shewn that cattle are chiefly raised in regions having more than twenty inches of rainfall per annum. Temperature has little effect. Sheep are very largely contained between the twenty and thirty-inch isohyets, though they are numerous between the ten and forty-inch isohyets. They do not extend so far north as the cattle; the hinterland of Broome, Western Australia, being the most northern of the important sheep areas. Wheat is grown almost entirely between the ten and twenty-inch isohyet. It is limited by temperature in the north, for very little is grown north of Nanango, in south-east Queensland, which has an average annual temperature of about 70° F.

**10. Potential Production in the Tropics.**—The two chief controls governing crops are, of course, temperature and rainfall, and the rain must stimulate growth at the proper season of the year. It is comparatively simple to express graphically the climatic conditions which are highly favourable for such crops as cotton, tea, coffee, rubber, etc. Such graphs have been named *hythergraphs*† by the writer of this article, and they are illustrated in Figs. 6 and 7.

For each locality a table of the twelve average monthly temperatures and rainfalls is consulted. These twelve points are plotted on a chart with the proper co-ordinates. Thus, each locality is represented by a twelve-sided polygon—the hythergraph—which accurately represents the march of temperature and rainfall throughout the year. In Fig. 6 are graphs for tropical Australian towns—Wyndham, Darwin, Rockhampton, Longreach, Carnarvon, and Alice Springs. All these fit within a slipper-shaped boundary, which represents the general range of climate in Northern Australia. Herberton, on the elevated Atherton Plateau, is seen to be quite exceptional in its climate.

The application of this graph is seen in Fig. 7. Here are plotted the graphs for such places as Lahore (which is a very important district for summer wheat); Calcutta, a typical rice region; Nagpur, famous for cotton, etc., etc. It will be seen that all these graphs can be closely paralleled on the north coast of Australia (see Fig. 6). No account is taken of soils (which lie outside the writer's province), but it may be assumed that there are many acres of suitable soil near the permanent rivers flowing to the north coast.

Such crops as tea and coffee need cooler regions, and there are few such in the tropics. It will be seen that the hythergraph for Herberton indicates that the wetter portion of the Atherton Plateau is very suitable for these crops. Many experimental plots have, of course, been devoted to new products on various research farms in Australia. This climatological study will, however, support their introduction on a larger scale.

**11. Wet Bulb Temperatures and Comfort.**—It is generally accepted by physiologists that the best available instrument for testing the suitability of a region as regards habitability is the wet bulb thermometer. Professor J. W. Gregory quotes 78° F. wet bulb as a limit—"above which continuous hard work becomes impracticable." Unfortunately for Australia 78° F. wet bulb is quite common in summer along our northern coast, but this statement (by a strong supporter of tropical white settlement) will free the following deductions from a charge of exaggeration.

---

\* "The Climatic Control of Production," by Griffith Taylor, 1913.

† *Hyetos*, rain; and *therme*, heat. See "The Australian Environment."

For reasons which are elaborated in Meteorological Bulletin No. 14,\* 70° F (wet bulb) has been adopted as the limit of comfort for our race. This means that when the average wet bulb remains above 70° F. day after day for a long period, conditions are not favourable for close white settlement. An open-air active occupation such as stock-riding has little to fear; but strenuous field labour, sedentary indoor life, and especially domestic work and the care of young children, cannot be carried on under favourable conditions at present with high wet bulb temperatures of this order.

It is well known that February is usually the most oppressive month both in Sydney and Melbourne. The average wet bulb temperatures for this month are, however, only 65° F. and 60° F. respectively, while at Melbourne the extreme reading for any day in the year rarely exceeds 75° F.

Brisbane has two months with an average wet bulb over 70° F., and conditions become continuously less attractive as one journeys up the coast. At Mackay such high wet bulbs obtain for six months in the year; at Cooktown for ten, and at Thursday Island all the year round. These isopleths are plotted on Fig. 8. It will be noticed that it is precisely the low-lying river alluvials of the north which are adversely affected. Here irrigation may ultimately be possible, for there are many fine rivers running into the northern seas. But it is doubtful if a white farming community will settle in these agricultural areas for very many years.†

**12. Comparative Climatology and the Climograph.**—Just as heat and moisture determine the well-being of plant life, so do they control the comfort of the human race. But in place of the dry bulb and rainfall, the wet bulb and humidity indicate more directly the effect on man's feelings. Indeed wet bulb temperatures have been termed "sensible" temperatures for this reason. Humidity is a better factor than rainfall—for the average rainfall at a place often remains at zero for many months of the year, while the humidity rarely falls below 40 per cent., and shews the sequence of climatic changes much more clearly.

A graphical representation, akin to the hythergraph for crops, can therefore be drawn from the twelve monthly means of humidity and wet bulb at the required locality. This the writer has named the *climograph*, and it is being accepted generally as giving a clear picture of the climatic changes. (See Bulletin 14.)

In Fig. 9 are shown types of all the chief climates of the world, while at the side is a tentative scale of discomfort depending on the wet bulb readings alone.

As a criterion enabling one to judge if a locality is well suited for close white settlement, a composite climograph is given, based on averages from twelve centres of Anglo-Saxon settlement. This is the cigar-shaped climograph which is shaded in Fig. 9.

Unhealthy regions near the Equator with a uniformly muggy climate are represented by Madras and Batavia. Scorching dry regions—with, however, monsoonal rains in midsummer—are illustrated by Jhansi in Central India. Simla shows one of the keen winter types, though it is also affected by the monsoons in summer. London (see Fig. 9) agrees almost exactly with the type white climograph. Seattle, United States of America, is similar, but wetter. Bronno, near Trondhjem, and Prince Rupert, British Columbia, illustrate raw conditions. Winnipeg and Ross Island, Antarctica, extend far below the temperatures of normal white settlement.

Australian localities have a fairly wide range, as will have been gathered from the first section of this article. There are no "keen" or "raw" climates, but "scorching" and "muggy" types are but too well represented. The more important places are all given

\* "The Control of Settlement by Humidity and Temperature," by Griffith Taylor, Melbourne, 1916. † *Vide* "Settlement in the Tropics," by Griffith Taylor. Royal Geographical Society of Queensland, 1918.

on Fig. 10. The cluster of climographs covers an area curiously resembling an arrow-head, and this outline is inserted on the general chart, Fig. 9. (For other continents the climographs would cover a much larger area of the chart.)

The cooler localities in Fig. 10 have the major axes of their climographs running north-west—which means dry summers and wet winters. The hotter localities have the major axis running north-east—which means they are in the monsoon region, with wet summers. The inland localities have low humidity, and so appear at the left of the chart, usually as crescents, which fact indicates that they have a little winter rain and a little summer rain. The climographs for east coast localities (Sydney, Brisbane, etc.) are much less elongated, which implies that spring differs from autumn more than in the other portions of Australia; in fact, the special autumn rainfall is indicated by the high humidity, as we should expect.

The Tentative Scale of Discomfort at the side of the chart will enable the reader to see the conditions in any month at any of the localities at a glance. He can also compare the localities *inter se*; and by reference to the original memoir (Bulletin 14, where seventy climographs are charted) with most other regions of the world.

13. **Settlement in the Tropics.**—The chief object of this article is to focus attention on the climatic difficulties which hinder settlement in the unoccupied regions of Australia. Space does not permit of the insertion of further illustrative climographs, but the following table seems to indicate that our northern lands are not well suited for *close* white settlement. In the table the foreign homoclime (similar region) appears in each case at the right of the Australian locality. (See also Fig. 1.)

TABLE XI.—TROPICAL AUSTRALIAN HOMOCLIMES.

AUSTRALIAN LOCALITY AND A FOREIGN HOMOCCLIME.													
Locality.	Temperature.			Rainfall.			Locality.	Temperature.			Rainfall.		
	Average.	Hottest Month.	Coldest Month.	Average.	Wettest Month.	Driest Month.		Average.	Hottest Month.	Coldest Month.	Average.	Wettest Month.	Driest Month.
Broome ...	79.8	85.9	70.3	23	6	0	Banana, R. Congo	77.9	81.5	72.5	29	6	0
Nullagine	79.8	85.9	70.3	23	3	0	Colima, S.W. Mexico	76.1	80.0	69.6	34	7	0
Carnarvon	71.0	80.0	60.0	9	3	0	Olukonda, S.W. Africa	72.0	77.0	51.0	19	5	0
Wiluna ...	70.0	85.0	52.0	10	2	0	Windhoek, S.W. Africa	67.0	74.0	56.0	15	4	0
Darwin ...	83.0	84.0	77.0	62	15	0	Cuttack, E. of India	80.0	87.0	70.0	55	12	0
Daly Waters	80.0	87.0	69.0	27	6	0	Quixeramobim, Brazil	81.0	83.0	79.0	27	6	0
Alice Springs	70.0	84.0	53.0	11	2	0	Biskra, Algeria	69.0	89.0	51.0	10	1	0
Townsville	78.0	82.0	66.0	49	11	0	Calcutta	78.0	82.0	65.0	60	12	0
Wyndham	84.5	88.3	76.2	27	8	0	Tinnevely	84.3	89.5	73.5	28	9	0

Assuming that these and similar parallels are correct, it will be seen that the analogous regions (homoclimes) for Darwin are settled by Siamese, Indians and Bantu Blacks, and in Northern Brazil by half-caste Portuguese. Wyndham (as stated earlier) has for homoclime only the extreme tip of India. Broome's homoclime is inhabited by Bantu, and Townsville's (Rio de Janeiro) settled by the Portuguese.

Only in the inland country like that around Wiluna or Daly Waters, is there a homoclime even sparsely settled by North Europeans. This is the recently conquered German territory of South-west Africa.

In Eastern Brazil is a most interesting series of settlements; but the Germans have settled in the homocline of Grafton; the Italians in Brazilian "Brisbane," and only the Spanish immigrants touch even the cooler tropical regions.

This brief but comprehensive climatological study shews that Australia is ahead in tropical settlement. Her white sugar-growers around Cairns and Mourilyan are the advance guard of the white farmer in the tropics.

Limitations of space permit merely an allusion to one great asset in Australian northern lands—their freedom from yellow fever, and comparative immunity from beri-beri and malaria. There seems good reason to hope that the two latter will eventually disappear.

What then is indicated as regards the immediate future of the empty northern lands of Australia? The country is essentially a pastoral one—it is not an agricultural region. Apart from questions of labour and market, the lowlands west of Cooktown do not appear to be suitable for white farming at present.

A consideration of progress in Algeria and similar regions indicates that conditions in the Australian tropics may become more acceptable to white settlers in the future. In four or five generations it is possible that the native-born may become thoroughly acclimatised in the sub-tropical areas, and will then gradually spread in considerable numbers into the hotter and more humid zones to the north.

## SECTION IV.

## POPULATION.

## § 1. Commonwealth Population—Its Distribution and Fluctuation.

1. **Present Population.**—The estimated population of the several States of the Commonwealth at the end of 1901 and of each of the five years 1913-17 is shewn in the following table :—

## POPULATION OF COMMONWEALTH, ON 31st DECEMBER, 1901 and 1913-17.

Year.	States.						Territories.		Commonwealth
	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	North-eastern.	Federal. (a)

(a) Part of New South Wales prior to 1911.

2. **Growth of Population.**—(i.) 1788 to 1824. From 1788, when settlement first took place in Australia, until December 1825, when Van Diemen's Land (now Tasmania) became a separate colony, the whole of the British Possessions in Australia were regarded as one colony, viz., that of New South Wales. The population during this period increased very slowly, and at the end of 1824 had reached only 48,072.

COMMONWEALTH POPULATION—ITS DISTRIBUTION AND FLUCTUATION. 103

The population with which settlement in Australia was inaugurated, and that at the end of each year until 1824, are as follows:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1788 to 1824.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1788 <sup>a</sup>	...	...	1,035	1806	5,889	2,521	7,910
1788	...	...	859	1807	5,939	2,855	8,794
1789	...	...	645	1808	6,822	3,441	10,263
1790	...	...	2,056	1809	7,618	3,942	11,560
1791	...	...	2,873	1810	7,585	3,981	11,566
1792	...	...	3,264	1811	7,697	4,178	11,875
1793	...	...	3,514	1812	8,132	4,498	12,630
1794	...	...	3,579	1813	9,102	4,855	13,957
1795	...	...	3,466	1814	9,295	4,791	14,086
1796	2,953	1,147	4,100	1815	9,848	5,215	15,063
1797	3,160	1,184	4,344	1816	11,690	5,863	17,553
1798	3,367	1,221	4,588	1817	14,178	7,014	21,192
1799	3,804	1,284	5,088	1818	17,286	8,573	25,859
1800	3,780	1,437	5,217	1819	21,366	10,106	31,472
1801	4,372	1,573	5,945	1820	23,784	9,759	33,543
1802	5,208	1,806	7,014	1821	26,179	9,313	35,492

(a) On 26th January. Recent research by Dr. J. F. Watson, now Editor of the Historical Records of Australia, goes to show that the original nucleus was 1024 persons.

(ii.) 1825 to 1858. The period extending from 1825 to 1859 witnessed the birth of the colonies of Tasmania (then known as Van Diemen's Land), Western Australia, South Australia, Victoria, and Queensland. The years in which these came into existence as separate colonies were as follows:—Tasmania, 1825; Western Australia, 1829; South Australia, 1834; Victoria, 1851; Queensland, 1859.

The estimated population of the Commonwealth at the end of each year of this transition period is as follows:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1825 to 1858.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1825	40,288	12,217	52,505	1842	153,758	87,226	240,984
1826	41,289	12,593	53,882	1843	158,846	92,002	250,848
1827	43,053	13,247	56,300	1844	165,034	99,253	264,287
1828	44,778	13,419	58,197	1845	173,159	105,989	279,148
1829	46,946	14,988	61,934	1846	181,342	111,907	293,249
1830	52,885	17,154	70,039	1847	190,265	118,532	308,797

# 104 COMMONWEALTH POPULATION—ITS DISTRIBUTION AND FLUCTUATION.

(iii.) 1859 to 1917. From 1859, the year in which Queensland came into existence as a separate colony, until the beginning of 1901, when the Commonwealth of Australia was inaugurated under the provisions of the Commonwealth Constitution Act, Australia consisted of six States, practically independent of each other in all matters of government. During this period, the population of the Commonwealth increased from 1,050,828 at the end of 1858 to 3,765,339 on the 31st December, 1900. The particulars for this period are given in the table hereunder.

During the seventeen years that have elapsed since the federation of the States was effected the population of the Commonwealth has increased by 1,169,972, from 3,765,339 on 31st December, 1900, to 4,935,311 on 31st December, 1917. See table hereunder:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1859 to 1917.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1859	644,376	452,929	1,097,305	1889	1,649,094	1,413,383	3,062,477
1860	668,560	477,025	1,145,585	1890	1,692,831	1,458,524	3,151,355

1882	1,289,892	1,098,190	2,388,082	1912	2,466,968	2,266,391	4,733,359
1883	1,357,423	1,148,313	2,505,736	1913	2,536,530	2,335,529	4,872,059
1884	1,411,996	1,193,729	2,605,725	1914	2,551,431	2,389,521	4,940,952
1885	1,460,394	1,234,124	2,694,518	1915	2,496,140	2,435,848	4,931,988
1886	1,510,954	1,277,096	2,788,050	1916	2,401,064	2,474,261	4,875,325
1887	1,559,118	1,322,244	2,881,362	1917	2,419,001	2,516,310	4,935,311
1888	1,610,548	1,371,129	2,981,677				

It will be seen from the foregoing tables that the population of Australia attained its first million in 1858, seventy years after settlement was first effected; its second million nineteen years later, in 1877; its third million twelve years later, in 1889; and its fourth million sixteen years later, in 1905. The fifth million was expected in 1915, but owing to the war and the consequent dispatch of men out of Australia this result has not yet been attained. As a matter of fact through the retardation of immigration and the departure of troops consequent upon the war, the total population of Australia diminished during 1915 by 8964 persons. Taking the sexes separately, there was a decrease of 55,291 males and an increase of 46,327 females during the year. In 1916 there was a further decrease of 56,663, the males decreasing by 95,076, and the females increasing by 38,413. In 1917 there was a recovery of 59,986 in the total population, made up of 17,937 males and 42,049 females.

The growth of the total population of the Commonwealth generally, and of each State therein, is graphically shewn on page 145, and of each sex considered separately on pages 146 and 147.

## § 2. Influences affecting Growth and Distribution of Population.

**1. Mineral Discoveries.**—The discovery of gold in Australia in 1851 was undoubtedly one of the most influential factors in bringing about a rapid settlement of the country. Its effect may be gauged by a comparison of the increase during the ten years preceding, with that during the ten years succeeding the discovery. From 31st December, 1840, to 31st December, 1850, the increase was only 214,948 (viz., from 190,408 to 405,356). The rush of people to the newly-discovered goldfields during the succeeding decennium caused an increase of no less than 740,229, the population advancing to 1,145,585 on 31st December, 1860. In 1861, owing to the opening up in that year of the New Zealand goldfields, a rush of population from Australia set in, the result being that the net increase of population of the Commonwealth, which in 1855 amounted to 98,343, and even in 1860 was as much as 48,280, fell in 1861 to 22,564. In fact, during the year 1861 the departures from Australia exceeded the arrivals by 6,283, the gain of 22,564 being due to the births exceeding the deaths by 28,847.

In more recent years the gold discoveries of Western Australia in 1886 and subsequent years, led to such extensive migration to that State, that its population, which on 31st December, 1885, amounted to only 35,959, increased in 32 years by no less than 273,464, totalling 309,423 on 31st December, 1917. In this case, however, the additions to the population of the western State were largely drawn for some years from those of the eastern States, so that the actual gain of population to the Commonwealth was relatively slight.

**2. Pastoral Development.**—Very early in the colonisation of Australia it was recognised that many portions were well adapted for pastoral pursuits, and pastoral developments have led to a considerable distribution of population in various directions. As the numbers engaged in connection therewith, compared with the value of the interests involved, are relatively small, and as pastoral occupancy tends to segregation rather than aggregation of population, the growth of the pastoral industry is but slightly reflected in the population statistics of the Commonwealth.

**3. Agricultural Expansion.**—At the present time the area annually devoted to crops in the Commonwealth is over 16½ millions of acres. Although considerable in itself, this area, viewed in relation to the total area of the Commonwealth, is relatively small, and represents less than 1 per cent. of the total area. Per head of population of the Commonwealth the area under crop, however, is about 3½ acres, a fairly high amount when allowance is made for the recency of Australian settlement. About 84½ per cent. of the area under crop in 1916-17 was devoted to the production of wheat and hay, which for profitable production in Australia require a considerable area in the one holding. Thus, on the whole, the agricultural districts of Australia are somewhat sparsely populated, though in a less marked degree than is the case in the pastoral areas.

**4. Progress of Manufacturing Industries.**—One direct effect of the development of manufacturing industries is the concentration of population in places offering the greatest facilities for the production of the particular commodities. In Australia, where manufacturing industries are as yet in their infancy, the tendency throughout has been to concentrate the manufacturing establishments in each metropolis. This has accentuated the growth of the capital cities, which growth when compared with that of the rest of the country, appears somewhat abnormal.

**5. Influence of Droughts.**—The droughts, which at times so seriously affect the agricultural and pastoral prospects of Australia, have a marked influence on the distribution of population. Districts, which in favourable seasons are fairly populous, occasionally in times of drought become more or less depopulated until the return of better conditions. This movement, however, ordinarily affects only the internal distribution of the population and not the total, but severe drought may even make its

influence felt in the statistics of the total population of Australia. Thus in the case of the drought of 1902-3, the departures from the Commonwealth exceeded the arrivals for the two years 1903 and 1904 by 12,859. It may be noted also, that for the former of these years, the natural increase of population by excess of births over deaths was abnormally low, being only 51,150, as compared with 54,698 in the preceding and 60,541 in the succeeding year. As the solution of the problem of dealing with droughts is advanced, their influence will be less marked.

6. *Other influences.*—(i.) *Commercial Crises.* The effect on population of a commercial crisis, such as that which occurred in Australia in the early years of the final decade of the last century, is clearly indicated on comparing the migration statistics of the Commonwealth for the five years 1887-91 with those for the five years 1892-96. During the former period, the arrivals in the Commonwealth exceeded the departures by no less than 146,872. In the latter period, the corresponding excess amounted to only 2064.

(ii.) *War.* The war in South Africa has left its impress on the population statistics of the Commonwealth, the departures during 1899 and 1900 exceeding the arrivals for the same period by 10,546. A similar but much more marked result is being shewn in connection with the European war, which, at the time of writing, is still in progress. Thus, for the four years 1914, 1915, 1916 and 1917, taken together, the departures have exceeded the arrivals by a total of no less than 264,265.

A reference to the graphs of population on pages 145 to 150 will illustrate the preceding observations.

### § 3. Special Characteristics of Commonwealth Population.

1. *Sex Distribution.*—In respect of the relative proportions of the sexes in its population, Australia has, since the first settlement of the continent in 1788, differed materially from the older countries of the world. In the latter, the populations have, in general, grown by natural increase, and their composition usually reflects that fact, the numbers of males and females being in most countries approximately equal, with a more or less marked tendency, however, for the females to slightly exceed the males. The excess of females arises from a variety of causes, amongst which may be mentioned—(a) higher rate of mortality amongst males; (b) greater propensity on the part of males to travel; (c) the effects of war; (d) employment of males in the army, navy, and mercantile marine; (e) preponderance of males amongst emigrants. On the other hand, the last-mentioned cause has tended naturally to produce an excess of males in Australia, since the majority of those emigrating to Australia have been males. The circumstances under which the colonisation of Australia was first undertaken, and the remoteness of this country from Europe, have combined to accentuate this feature.

There is little doubt that the continent presented few attractions to the explorers who visited its shores, mainly on the west and north, during the sixteenth, seventeenth, and early part of the eighteenth centuries, and it was only when the Declaration of Independence of the United States, in 1776, closed to the British prison authorities the North American plantations, which had previously been used as receptacles for the deportation of convicts, that the overcrowding of the gaols caused them to consider the advisability of converting the great southern continent into a convict settlement. This idea was put into practice in 1787, when the first consignment left England, arriving in Sydney Cove on the 26th January, 1788. Reports concerning the number of persons actually landed are conflicting, but it appears that the total may be set down approximately at 1035, including the military. Details as to the sexes are not available, but the males must have largely preponderated. Indeed, nearly nine years later, on the 31st December, 1796, in a total population of 4100, there was an excess of 44 males in every 100 of the population.

The subsequent progress of Australia resulting from extensive mineral discoveries and the development of its great natural resources, pastoral, agricultural, forestal, etc.,

have tended to attract male rather than female immigrants, particularly in view of the distance from the principal centres of European population. Even at the Census of 3rd April, 1911, after more than 123 years of settlement, there was an excess of 3.84 males in every 100 of the population, and this notwithstanding the equalising tendency due to additions to the population by means of births and to deductions therefrom by the deaths of immigrants.

In the second issue of this publication, on pages 163 to 165, an extended table was published shewing the masculinity of the population of each of the States for each year from 1796 to 1907. In the fifth issue, on page 123, the figures in this table for the years 1901-7 were modified to agree with the corrected estimates of the population, consequent on the Census of 3rd April, 1911. The figures given in the tables mentioned represent the number of males to each 100 females.

A more scientific determination of masculinity, however, may be obtained by computing the ratio of the excess of males over females to the total population. This ratio expressed as a percentage has now been adopted by the Commonwealth Bureau of Census and Statistics as the "masculinity" of the population, and the ratios so computed are given hereunder for intervals of 5 years from 1800 to 1915 and for the two years 1916 and 1917 for the Commonwealth and each of its component States and Territories:—

### MASCULINITY OF THE POPULATION, 1800 to 1917.

(EXCESS OF MALES OVER FEMALES PER 100 OF POPULATION.)

Year.	States.						Territories.		C'wealth.

1915	1.92	-2.26	5.95	-3.19	7.73	1.24	61.60	4.65	1.22
1916	-0.61	-4.71	2.93	-6.86	3.62	-0.12	61.06	7.42	-1.50
1917	-1.13	-4.84	2.16	-7.64	2.58	-0.07	58.35	2.66	-1.97

(a) Including Federal Territory prior to 1911. (b) Including Northern Territory prior to 1900.  
(c) Included with South Australia prior to 1900. (d) Part of New South Wales prior to 1911.

The influence of the war will be observed in the decline of the masculinity for each of the States and the Commonwealth, and the introduction of negative results in the cases of South Australia, New South Wales, Tasmania and the Commonwealth indicating an excess of females there, as well as in Victoria, where this phenomenon was in evidence as far back as 1905.

The curious inequalities of the increases in the number of males and in the number of females for the Commonwealth as a whole, and for the individual States respectively, will be seen by referring to the graphs on pages 146 and 147.

The significance of the rates of masculinity shewn in the above table will perhaps be better understood by a comparison with the corresponding information for other countries. This has been made in the next table, which shews, for some of the principal countries of the world for which such particulars are available, the masculinity of the population according to the most recent statistics:—

#### MASCULINITY OF THE POPULATION OF VARIOUS COUNTRIES.

NOTE.—The sign — denotes excess of females over males in each 100 of population.

2. **Age Distribution.**—The causes which operated to bring about an excess of males in the population of the Commonwealth were equally effective in rendering the age distribution essentially different for many years from that of older countries. The majority of the immigrants, whether male or female, were in the prime of life, and as the Australian birth-rate in earlier years was a comparatively high one, the effect produced was a population in which the proportion of young and middle-aged persons was somewhat above, and the proportion for advanced ages somewhat below the normal. With the progress of time, however, the age distribution for Australia has fallen more and more into line with that for the older countries, and now, except in shewing a lower proportion at old age and a slightly higher at young ages, does not differ essentially therefrom.

Thus in the Commonwealth at the Census of 3rd April, 1911, the age distribution of the population was as shewn in the table hereunder; that for England and Wales for the same Census is given also for the sake of comparison:—

#### AGE DISTRIBUTION OF POPULATION, COMMONWEALTH, AND ENGLAND AND WALES IN 1911.

Age Group.	Population of COMMONWEALTH, 3rd April, 1911.	Percentage on Total Population.	Population of ENGLAND and WALES, 3rd April, 1911.	Percentage on Total Population.
Under 15 ... ..	1,409,823	31.65	11,050,867	30.63
15 and under 65 ... ..	2,854,753	64.08	23,141,109	64.16
65 and upwards ... ..	190,429	4.27	1,878,516	5.21
Total ... ..	4,455,005	100.00	36,070,492	100.00

During the past 50 years, the age distribution of the Australian population has varied considerably, as will be seen from the following table, which gives for each sex the proportion per cent. of the total population in the age groups "under 15," "15 and under 65," and "65 and over." The figures upon which these percentages have been computed are those furnished by the Censuses of the several States and the Commonwealth Census of 1911. Those for 1861 include the results of the Western Australian Census of 1859, while those for 1871 include the results of the Western Australian and Tasmanian Censuses of 1870 :—

AGE DISTRIBUTION OF COMMONWEALTH POPULATION, 1861 to 1911.

Census Year	Males.				Females.				Persons.			
	Under 15 Years.	15 and under 65.	65 and over.	Total	Under 15 Years.	15 and under 65.	65 and over.	Total.	Under 15 Years.	15 and under 65.	65 and over.	Total
	%	%	%	%	%	%	%	%	%	%	%	%
1861	31.41	67.42	1.17	100	43.03	56.20	0.77	100	36.28	62.72	1.00	100
1871	38.84	59.11	2.05	100	46.02	52.60	1.38	100	42.09	56.17	1.74	100
1881	36.37	60.85	2.78	100	41.89	56.07	2.04	100	38.91	58.65	2.44	100
1891	34.77	62.02	3.21	100	39.36	58.08	2.56	100	36.90	60.20	2.90	100
1901	33.87	61.82	4.31	100	36.50	59.85	3.65	100	35.12	60.88	4.00	100
1911	30.84	64.82	4.34	100	32.52	63.28	4.20	100	31.65	64.08	4.27	100

The excess of males over females, which existed prior to the war, was found mainly in ages of 21 and upwards. In the total population under the age of 21 there was, at the date of the last Census, an excess of males over females amounting to less than 1.3 in each 100 of population, while in that aged 21 and upwards the excess of males over females was more than 5.8 in each 100 of population.

**3. Race and Nationality.**—(i.) *Constitution of Australia's Population.* As regards race, the population of the Commonwealth may be conveniently divided into two main groups, one comprising the aboriginal natives of Australia, and the other the various immigrant races which, since the foundation of settlement in 1788, have made the Commonwealth their home. Under the head of "immigrant races" would, of course, be included not only those residents of Australia who had been born in other countries, but also their descendants born in Australia.

(a) *Aboriginals.* It would appear that the aboriginal population of Australia was never large, and that the life led by them was, in many parts of the country, a most precarious one. With the continued advance of settlement the numbers have shrunk to such an extent that in the more densely populated States they are practically negligible. Thus, at the Census of 1911 the number of full-blooded aboriginals who were employed by whites or were living in proximity to settlements of whites was stated to be only 19,939. In some cases, however, more particularly in Queensland, Western Australia, and the Northern Territory, there are, in addition, considerable numbers of natives still in the "savage" state, numerical information concerning whom is of a most unreliable nature, and can be regarded as little more than the result of mere guessing.

Ethnologically interesting as is this remarkable and rapidly-disappearing race, practically all that has been done to increase our knowledge of them, their laws, habits, customs, and languages, has been the result of more or less spasmodic and intermittent effort on the part of enthusiasts either in private life or in the public service. An enumeration of them has never been seriously undertaken in connection with any Australian Census, though a record of the numbers who were in the employ of whites, or living in contiguity to the settlements of whites, has on the occasion of the recent Censuses usually been made. As stated above, various guesses at the number of aboriginal natives at present in Australia have been made, and the

general opinion appears to have prevailed that 150,000 might be taken as a rough approximation to the total. More recent estimates, however, have given results considerably below this figure. Thus, in his report of April 30, 1915, the Queensland Chief Protector of Aborigines estimates the total at 61,705, distributed as follows:—New South Wales, 6580; Victoria, 283; Queensland, 15,000; South Australia, 4842; Western Australia, 32,000; Northern Territory, 3000. In his report of April 20, 1917, the Chief Protector of Aborigines in Queensland estimated their number in that State to be 16,700 in 1916. A somewhat similar estimate made at an earlier date by Dr. Roth, formerly Chief Protector of Aborigines in Queensland, gave Queensland at least 18,000; Western Australia at least 24,000, and the Northern Territory from 20,000 to 22,000. In view of these figures it would appear that the number of aboriginal natives in Australia may be said to less than 100,000. The whole matter, however, is involved in considerable doubt.

The number of aboriginal natives enumerated in the several States and Territories of the Commonwealth at the Census of 1911 was as shewn hereunder, the figures given relating as before stated only to those in a civilised or semi-civilised condition.

#### ABORIGINAL NATIVES ENUMERATED AT CENSUS OF 1911.

Particulars.	N.S.W.	Victoria.	Queens- land.	South Australia.	Western Australia.	Tas- mania.	Northern Territory.	Federal Territ'y	C'wlth.
Males ...	1,152	103	5,145	802	3,433	2	743	5	11,385
Females ...	860	93	3,542	637	2,936	1	480	5	8,554
Total	2,012	196	8,687	1,439	6,369	3	1,223	10	19,939
Masculinity (a)	14.51	5.10	18.45	11.47	7.80	66.67	21.50	50.00	14.20

(a) Excess of males over females per 100 of the sexes combined.

These figures, as noted above, refer only to those natives who were, at the date of the Census, in the employ of whites or were living in contiguity to the settlements of whites.

In the Commonwealth Constitution Act provision is made for aboriginal natives to be excluded for all purposes for which statistics of population are made use of under the Act, but the opinion has been given by the Commonwealth Attorney-General that, "in reckoning the population of the Commonwealth, half-castes are not aboriginal natives within the meaning of section 127 of the Commonwealth of Australia Constitution Act, and should therefore be included." It may be added, however, that as "half-castes," living in the nomadic state, are practically indistinguishable from aboriginals, it has not always been found practicable to make the distinction, and further, that no authoritative definition of "half-caste" has yet been given.<sup>1</sup>

(b) *Immigrant Races.* As regards the immigrant races, it may be said that they consist mainly of natives of the three divisions of the United Kingdom and their descendants. The proportion of Australian-born contained in the population of the Commonwealth has, in recent years, increased rapidly, and at the Census of 3rd April, 1911, out of a total population of 4,424,535 persons whose birthplaces were specified, no fewer than 3,667,670, or 82.90 per cent., were Australian born, while of the remainder, 590,722, or 13.35 per cent., were natives of the United Kingdom, and 31,868, or 0.72 per cent., were natives of New Zealand, that is, 96.97 per cent. of the total population at the date of the Census had been born in either Australasia or the United Kingdom. The other birthplaces most largely represented in the Commonwealth were Germany, 32,990 (0.75 per cent.); China, 20,775 (0.47 per cent.); Scandinavia (comprising Sweden, Norway and Denmark), 14,700 (0.33 per cent.); Polynesia, 3410 (0.08 per cent.);

1. An article on the Aborigines of Australia, specially written for the Year Book by W. Ramsay Smith, D.Sc., M.B., C.M., F.R.S.E., Permanent Head of the Department of Public Health of South Australia, will be found in Year Book No. 3, Section IV., § 12, page 158.

British India, 6644 (0.15 per cent.); United States of America, 6642 (0.15 per cent.); and Italy, 6719 (0.15 per cent.). The total population of Asiatic birth was 36,442 (0.82 per cent.), of whom 3474 were born in Japan.

(c) *Non-European Races.* The Census taken on the 3rd April, 1911, was the first occasion on which a systematic attempt had been made to ascertain the number of persons of non-European races in Australia. On former occasions the inquiry did not usually extend further than a request that in all cases in which the person enumerated was an Aboriginal or a Chinese, whether of the full-blood or of the half-blood, the fact should be specially noted in the column on the Census schedule relating to birthplace. At the last Census the inquiry as to race was made one of the leading items, and all persons of non-European race were required to have their race specified. From the figures so obtained the following table has been compiled:—

**PERSONS OF NON-EUROPEAN RACE IN THE COMMONWEALTH, 3rd APRIL, 1911.**  
(EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)

States and Territories.	Aust- ralian Half- caste Abori- ginals	Asiatic.		African.		American.		Polynesian.		Indefinite.		Total.

(ii.) *Biological and Sociological Significance.* As regards race and nationality, therefore, the population of Australia is fundamentally British, and thus furnishes an example of the transplanting of a race into conditions greatly differing from those in which it had been developed. The biological and sociological significance of this will ultimately appear in the effects on the physical and moral constitution produced by the complete change of climatic and social environment, for the new conditions are likely to considerably modify both the physical characteristics and the social instincts of the constituents of the population. At present, the characteristics of the Australian population, whether physical, mental, moral, or social, are only in the making, and probably it will not be possible to point to a distinct Australian type until three or four generations more have passed. Even then, it is hardly likely that, with the great extent of territory and varying conditions presented by the Commonwealth there will be but one type; on the contrary, a variety of types may be expected. The Australian, at present, is little other than a transplanted Briton, with the essential characteristics of his British forbears, the desire for freedom from restraint, however, being perhaps somewhat accentuated. The greater opportunity for an open-air existence, and the absence of the restrictions of older civilisations, may be held to be in the main responsible for this.

4. *Differences among the States and Territories.*—(i.) *Sex Distribution.* The varying circumstances under which the settlement of the several States has been effected, and the essentially different conditions experienced in the due development of their respective resources, have naturally led to somewhat marked differences in the constitution of their populations. In the matter of sex distribution, the States in which the normal condition of older countries is most nearly represented are those of Victoria, South Australia, and Tasmania, in the first-mentioned of which, the females have, for some years past, with the exception of the year 1913, exceeded the males. This was also the case in South Australia in the years 1914, 1915, 1916 and 1917. In Western Australia and Queensland, on the other hand, the position of affairs has been somewhat abnormal, the excess of males over females in each 100 of population in 1915 being respectively 7.73 and 6.20. In 1916 and 1917 however, these rates were much reduced, having fallen in the latter year to 2.58 and 2.16 respectively. In 1916 there was an excess of females over males for the first time in New South Wales to the extent of 0.61 in each 100 of the population, followed in 1917 by an excess of 1.13.

In the Northern Territory, owing to lack of settlement, the masculinity has always been large, the figures for 1917 giving an excess of males over females in each 100 of population of no less than 58.

The variation in the masculinity of the estimated population of the several States and Territories and of the Commonwealth as a whole will be seen in the table on page 107.

(ii.) *Age Distribution.* The disparity in sex distribution exhibited by the several States is accompanied by a corresponding inequality in the matter of age distribution. For the purpose of convenient comparison in this respect the several populations may each be divided into three groups, indicative of dependence on the one hand, and ability to support on the other. The usual division for this purpose is into an initial group of "under 15" classed as "dependent age," a second group of "15 and under 65" classed as "supporting age," and a final group of "65 and upwards" classed "old age." From certain points of view the division might be into two classes, the "supporting" and the "dependent," as the majority of those aged "65 and upwards" strictly belong to the dependent class. The number of persons in each State at the Census 3rd April, 1911, in each of the three groups mentioned, and the proportion of same to the total for each State and the Commonwealth, were as follows:—

**NUMBER AND PROPORTION OF PERSONS IN THE COMMONWEALTH OF  
DEPENDENT, SUPPORTING, AND OLD AGE, ON 3rd APRIL, 1911.**

State or Territory.	Number of Persons of—				Proportion of Population of—		
	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).	All ages.	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).
States—					%	%	%
New South Wales ...	526,625	1,053,400	66,709	1,646,734	31.98	63.97	4.05
Victoria ...	400,260	847,700	67,591	1,315,551	30.42	64.44	5.14
Queensland ...	200,020	383,330	22,463	605,813	33.01	63.28	3.71
South Australia ...	127,290	262,356	18,912	408,558	31.15	64.22	4.63
Western Australia ...	87,884	187,574	6,656	282,114	31.15	66.49	2.36
Tasmania ...	66,708	116,604	7,899	191,211	34.89	60.98	4.13
Territories—							
Northern ...	485	2,708	117	3,310	14.65	81.81	3.54
Federal ...	551	1,081	82	1,714	32.15	63.07	4.78
Commonwealth ...	1,409,823	2,854,753	190,429	4,455,005	31.65	64.08	4.27

In Western Australia a larger proportion of its population was of supporting age than in any other State, whilst the Tasmanian proportion was the lowest. On the other hand, in Tasmania the proportion of dependent age was the highest for the Commonwealth, while the Victorian proportion was the lowest. Victoria had the highest and Western Australia the lowest proportion of persons aged 65 years and upwards.

In the Northern Territory the proportions are quite exceptional, the percentage of those of dependent age being much lower, and that for supporting age being much higher, than in any other part of the Commonwealth.

(iii.) *Birthplaces.* The following table exhibits, in a very condensed form, the distribution of the population of the several States and Territories according to birthplace:—

**BIRTHPLACES OF POPULATION AT CENSUS OF 3rd APRIL, 1911.**

(COMMONWEALTH.)

Birthplace.	Population of Commonwealth at Census.								
	States.						Territories.		C'wealth.
	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	North-ern.	Fede-ral.

The proportions for the several States and Territories for each of the birthplaces shewn in the foregoing table expressed as percentages of the total population, the birthplaces of which were specified, are as follows:—

**PERCENTAGE OF COMMONWEALTH POPULATION ACCORDING TO BIRTHPLACE,  
3RD APRIL, 1911.**

Birthplace.	Percentage of Total Population.								
	States.						Territories.		C'wth.
	New South Wales.	Victoria.	Queensland.	South Australia	Western Aust.	Tasmania.	Northern	Federal	
	%	%	%	%	%	%	%	%	%
Australia ...	84.19	85.01	74.09	86.16	74.66	90.95	45.86	89.32	82.90
New Zealand	0.86	0.77	0.43	0.24	1.10	0.63	0.55	0.24	0.72
U. Kingdom	12.49	12.07	19.90	10.93	18.05	7.10	7.98	9.54	13.35
Other European Countries	1.21	1.18	3.35	1.97	3.37	0.60	1.49	0.30	1.67
Asia ...	0.70	0.51	1.47	0.31	2.14	0.41	43.05	0.30	0.82
Africa ...	0.12	0.11	0.09	0.09	0.15	0.08	0.27	...	0.11
America ...	0.27	0.23	0.28	0.19	0.40	0.15	0.37	0.30	0.25
Polynesia ...	0.07	0.02	0.29	0.01	0.03	0.02	0.37	...	0.08
At Sea ...	0.09	0.10	0.10	0.10	0.10	0.06	0.06	...	0.10
Total ...	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00

As regards distribution in the States according to birthplace, the population of New South Wales is very similar to that of Victoria, the proportions born in the United Kingdom and Asia being slightly higher, and that born in Australia slightly lower, in the case of New South Wales. There is also a rough similarity between the population distributions of Queensland and Western Australia. In both, the Australian-born represent a much smaller, and those born in the United Kingdom, in "Other European Countries" and in Asia, a much larger proportion than is the case with the remaining States. Polynesians were, however, more numerous represented in Queensland at the date of the Census than in any other State. Natives of New Zealand were, proportionately, most numerous in Western Australia. Tasmania had the largest proportion of Australian-born population, viz., 91 per cent., while Queensland, with 74 per cent., had the smallest. On the other hand, nearly 20 per cent. of Queensland's population consisted of natives of the United Kingdom, while only 7 per cent. of the population of Tasmania had been born there. For the Commonwealth as a whole, over 98½ per cent. of the population were from Australasian or European birthplaces.

In the case of the Northern Territory, about 46 per cent. of the population were Australian born, while 43 per cent. were of Asiatic birth.

#### § 4. Elements of Growth of Population.

1. **Natural Increase.**—The two factors which contribute to the growth of a population are the "natural increase" by excess of births over deaths, and the "net immigration," i.e., the excess of arrivals over departures. While the relative potency of these factors depends upon a variety of causes, it may be said that, in general, in the case of a new country "net immigration" occupies an important position as a source of increase of population, while in an old country "natural increase," modified more or less by "net emigration," or excess of departures over arrivals, is the principal element causing growth of population. The table hereunder gives the total natural increase, as well as that of males and females:—

**NATURAL INCREASE (a) OF THE POPULATION**  
OF STATES, TERRITORIES, AND COMMONWEALTH, FROM 1861 TO 1917.  
**MALES.**

Period.	States.						Territories.		C'wealth
	N.S.W.	Victoria.	Q'land.	S. Aust. (b)	W. Aus.	Tas.	North- ern. (c)	Fed- eral. (d)

1861 to 1917 ...	1,157,444	918,360	381,973	324,175	114,320	143,794	—607	242	3,039,701

(a) Excess of births over deaths. (b) Including Northern Territory prior to 1901. (c) Included in South Australia prior to 1901. (d) Part of New South Wales prior to 1911.

NOTE.—Minus sign (—) denotes excess of deaths over births.

With two exceptions, viz., Tasmania for the period 1906 to 1910 and the Federal Territory for the period 1916 and 1917, the natural increase of females exceeded that of males throughout the years referred to in the foregoing table. The quinquennial period in which the largest natural increase of population took place was that of 1911-15 with a total for the Commonwealth of 407,512. For the individual States the quinquennia of maximum natural increase were as follows:—New South Wales, Queensland, South Australia, Western Australia and Tasmania, 1911-15; and Victoria, 1891-5.

2. **Comparison with other Countries.**—Notwithstanding its comparatively low birth-rate, Australia has a high rate of natural increase, owing to the fact that its death-rate is a very low one. The following table furnishes a comparison between the average rates per annum of natural increase for some of the principal countries of the world for which such information is available, and those for the several States of the Commonwealth and the Dominion of New Zealand :—

**NATURAL INCREASE PER ANNUM PER 1000 OF MEAN POPULATION  
(VARIOUS COUNTRIES).**

Country.	Natural Increase. per 1000.	Country.	Natural Increase. per 1000.	Country.	Natural Increase. per 1000.
Australasia(1913-17)		Europe— <i>continued.</i>		Europe— <i>continued.</i>	
Tasmania ...	19.05	Prussia ... (c)	13.63	Belgium ... (b)	7.83
Queensland ...	18.78	Denmark ...	12.87	Ireland ...	5.96

Serbia ... (b)	14.12				

(a) 1907-11.

(b) 1908-12.

(c) 1909-13.

(d) 1910-14.

The graphs of natural increase for each of the States, as well as for the Commonwealth, are shown on page 150.

3. **Net Immigration.**—The other factor of increase in the population, viz., the excess of arrivals over departures, known as "net immigration," is, from its nature, much more subject to marked and extensive variation than is the factor of "natural increase." These variations are due to numerous causes, many of which have already been referred to in dealing with the influences which affect the growth of population. An important cause not yet referred to, is that of assisted immigration. The number of persons so introduced varies considerably in different years.

**NET IMMIGRATION, OR EXCESS OF ARRIVALS OVER DEPARTURES**

NOTE.—The minus sign (—) signifies that the number of departures was in excess of arrivals.  
(a) Including Northern Territory up to 1900. (b) Included in South Australia up to 1900.  
(c) Part of New South Wales prior to 1911.

During the period 1861-1917, viz., 57 years, the gain to the Commonwealth population by excess of arrivals over departures was 750,025 persons, while the gain by excess of births over deaths for the same period was 3,039,701. That is, 19.79 per cent. of the increase for the Commonwealth during the past 57 years has been due to "net immigration" and 80.21 per cent. to "natural increase." In regard to the contribution by individual States to the total net immigration of 750,025, three of them, viz., New South Wales, Queensland, and Western Australia, shewed gains of 375,604; 278,503; and 179,757 respectively, while the remaining three, viz., Victoria, South Australia, and Tasmania shewed losses of 44,375; 9901; and 30,438 respectively.

The quinquennial period in which the greatest net immigration to the Commonwealth occurred was that of 1881-5 with a total of 224,040, whilst in the period 1901-5, the departures exceeded the arrivals by 16,793. The quinquennial periods in which maximum net immigration occurred in the several States were as follows:—New South Wales and Queensland 1881-5, Victoria 1886-90, South Australia 1876-80,

Western Australia and Tasmania 1896-1900. In all the States quinquennial periods have occurred in which the departures for the five years have exceeded the arrivals. The periods in which such net emigration from the several States was greatest were as follows:—New South Wales and Victoria 1896-1900, Queensland 1901-5, South Australia 1886-90, Western Australia 1871-5, and Tasmania 1911-15. In the two years 1916 and 1917 a net emigration of 155,842 was experienced, all the States having contributed to that total. This has been mainly due to the large numbers who have joined the over-sea forces in Europe and elsewhere owing to the war.

4. **Total Increase.**—The total increase of the population is found by the combination of the natural increase with the net immigration.

In the following table are set out the figures shewing the total increase in each quinquennium from 1861 to 1915 and for the two years 1916 and 1917:—

**TOTAL INCREASE OF THE POPULATION OF THE STATES, TERRITORIES AND  
COMMONWEALTH from 1861 to 1917.**

Note.—The minus sign (—) denotes decrease.

(a) Including Northern Territory up to 1900. (b) Included in South Australia up to 1900.

(c) Part of New South Wales prior to 1911.

As regards the Commonwealth as a whole, the greatest increase in any quinquennium up to 1910 was that for the period 1881-5, viz., 462,987. These figures were, however, closely approached by those for the succeeding quinquennium, viz., 456,837. The rate of increase fell off, however, in the three subsequent quinquennia, the increase for the years 1901-5 being 267,638. In the following quinquennium an improvement set in, the increase in that period being 392,106. This was followed by a further improvement in the quinquennium 1911-15, the first three years of which gave increases of 143,624, 164,652, and 138,700 respectively. In the two succeeding years a falling-off was recorded, but this must be taken as having been caused by the war, there having been an excess of departures over arrivals in the two years of 17,370 and 91,053 respectively. In spite of this adverse influence, the increase for the quinquennium 1911-15 was 506,905, the highest yet recorded for the Commonwealth.

As regards the individual States the maximum increases in any quinquennium are as follows:—New South Wales, 228,209, in 1911-5; Victoria, 173,890, in 1886-90; Queensland, 105,641, in 1881-5; South Australia (including the Northern Territory), 66,317, in 1876-80; Western Australia, 79,452, in 1896-1900; Tasmania, 18,005, in 1896-1900.

As regards the minimum increases, it will be seen that they have occurred as under:—New South Wales, 59,960, in 1861-5; Victoria, 10,537, in 1896-1900; Queensland, 28,351, in 1866-70; South Australia, 5,371, in 1901-5; Western Australia, 1,867, in 1871-5; Tasmania, 2,853, in 1871-5.

In the two years 1916 and 1917 the net increase was very small, viz., 3,323. This was mainly due to a net decrease of 56,663 in the former year owing to the despatch of troops to Europe and elsewhere. In 1917 there was a net increase of 59,986.

The graphs shewing net increase, both for the Commonwealth as a whole and for each of the States, will be found on pages 148 and 149.

**5. Rates of Increase.**—(i.) *Rates for various Countries.* The table hereunder furnishes particulars concerning rates of increase in population for the Commonwealth, its component States, and other countries:—

(a) Including Federal Territory. (b) Including Northern Territory.  
(c) 1911 to 1912. (d) 1911 to 1913. (e) 1911 to 1914. (f) 1911 to 1916. — Decrease.

(ii.) *Variations in the Commonwealth Rate.* During the twenty-five years 1881-1906 the annual rate of increase in the population of the Commonwealth exhibited a marked decline, falling from an average of 3.86 per cent. for the five years 1881-6 to an average of 1.38 for 1901-6. During the succeeding quinquennium, however, an improvement took place, the rate of increase being 2.03. In the following quinquennium there was a decline owing to the war. As regards the separate States of the Commonwealth, it will be seen that though the rates of increase for the quinquennium 1911-16 were in all cases lower than those for the quinquennia 1881-6 and 1886-91, it is only in the case of Western Australia that the 1911-16 rate represents the minimum for the seven quinquennia under review.

(iii.) *Comparison of Rates of Increase.* It may be noted that the highest rates of increase for the period 1906-11 are those for Canada, New Zealand, and the Commonwealth of Australia in the order named. The United States, Chile and Serbia rank next in order.

6. *Density of Population.*—From one aspect population may be less significant in respect of its absolute amount than in respect of the density of its distribution. The

Commonwealth of Australia, with an area of 2,974,581 square miles, and a population on 31st December, 1917, of 5,035,311 including aborigines, has a density of only 1.69 persons to the square mile, and is therefore the most sparsely populated of the civilised countries of the world. For the other continents the densities are approximately as follows:—Europe, 123; Asia, 53; Africa, 11; North and Central America, 16; and South America, 8. The population of the Commonwealth has thus about  $10\frac{1}{2}$  per cent. of the density of that of North and Central America, about  $21\frac{1}{2}$  per cent. of South America, about  $15\frac{1}{2}$  per cent. of that of Africa, about  $3\frac{1}{2}$  per cent. of that of Asia, and about  $1\frac{1}{2}$  per cent. of that of Europe.

Particulars concerning the number and density of the population of the various countries of the world for the latest dates for which such information is available are given in the following table. These figures have in the main been derived from the 1917 issue of the "Statesman's Year Book," and in some instances, more particularly in the case of Africa, must be considered as rough approximations only, complete data not being obtainable. As already mentioned on page 54 *ante* the areas dealt with in the following table are those which prevailed as at the outbreak of war:—

(a) Number of persons per square mile. (b) Inclusive of an allowance of 100,000 for Aboriginal Natives. (c) Inclusive of Maoris and population of Cook and other Pacific Islands. (d) Sold to United States in 1917.

### § 5. Seasonal Variations of Population.

1. **Natural Increase.**—For the Commonwealth as a whole the natural increase of the population is greatest in the quarter ending 30th September, and least in that ending 31st March. The birth rate is usually at its highest, and the death rate at its lowest, in the September quarter, and *vice versa* in the March quarter. The average natural increase in population of the several States for each of the quarters, based upon the experience of the ten years 1908 to 1917, is given in the following table, from which it will be seen that the quarter in which the rate of natural increase was highest is that ended 30th June for Victoria and Queensland, that ended 30th September for New South Wales and Western Australia, and that ended 31st December for Tasmania. In South Australia the natural increases for the June and September quarters were practically the same. The quarters shewing lowest rate of natural increase were that ended 31st March, in Victoria and Tasmania, that ended 30th June, in New South Wales, and that ended 31st December, in the three remaining States.

#### AVERAGE QUARTERLY NATURAL INCREASE, STATES AND COMMONWEALTH, 1908 to 1917.

State.	(a) Average Natural Increase for Quarter ended on last day of—								Average Natural Increase per annum, 1908-17.	
	March.		June.		September.		December.

Victoria ...	4,403	3.26	4,691	3.48	4,540	3.35	4,545	3.34	18,179	13.35
Queensland ...	2,785	4.44	2,972	4.67	2,959	4.63	2,803	4.40	11,519	18.09
S. Australia (c)	1,661	3.95	1,842	4.38	1,841	4.36	1,671	3.92	7,015	16.46
W. Australia ...	1,334	4.53	1,357	4.57	1,477	4.95	1,252	4.20	5,420	18.17
Tasmania ...	875	4.50	876	4.55	919	4.76	1,009	5.10	3,679	18.62
Commonwealth	18,859	4.08	19,478	4.19	19,860	4.26	19,094	4.08	77,291	16.50

(a) The symbol ‰ denotes "per thousand." (b) Including Federal Territory.

(c) Including Northern Territory.

2. **Net Immigration.**—For the Commonwealth as a whole for the decennium 1908-17, arrivals exceeded departures in the March and September quarters, while departures were in excess in the June and December quarters. Victoria, Queensland, and Western Australia experienced excesses of arrivals in three of the four quarters, New South Wales and South Australia in two, and Tasmania in one only. Particulars concerning the average net immigration of the several States are as follows:—

#### AVERAGE QUARTERLY NET IMMIGRATION, STATES AND COMMONWEALTH, 1908 to 1917.

State.	Quarter ended on last day of—								Average Net Immigration per annum, 1908-17.	
	March.		June.		September.		December.

C'wealth	389	0.08	—1,620	—0.35	3,384	0.73	—2,085	—0.45	68	0.01

NOTE.—The minus sign (—) denotes that the departures were in excess of arrivals, and ‰ denotes per thousand of population.

(a) Including Federal Territory. (b) Including Northern Territory.

## § 6. Urban Population.

1. **The Metropolitan Towns.**—A feature of the distribution of population in Australia is the tendency to accumulate in the capital cities. To such an extent is this metropolitan aggregation carried, that in every State the population of the capital far outnumbers that of any other town therein, and ranges between 21 and 52 per cent. of the entire population of the State. The estimated populations of the several capitals on 31st December, 1917, and the percentages of such populations on the totals for the respective States, are shewn in the table hereunder. That this metropolitan concentration is phenomenal, may be readily seen by comparing the percentage on the total population with the similar figures for the principal countries of Europe, also given in the table hereunder:—

### METROPOLITAN POPULATION.

(VARIOUS COUNTRIES.)

State or Country.	Metropolis.	Year.	Population.	Percentage on total of State or Country.
				%
New South Wales ...	Sydney ...	31st Dec., 1917.	777,300	41.35
Victoria ...	Melbourne ...		708,240	50.19
Queensland ...	Brisbane ...		173,504	25.20
South Australia ...	Adelaide ...		225,317	51.65

Russia (European) ...	Petrograd ... ..	1915	2,318,645	1.76
Italy ...	Rome ... ..	1914	590,960	1.64

(a) Population of Greater London in 1914 was 7,419,704.

2. **Urban Population Generally.**—In connection with the particulars shewing the tendency in Australia to concentrate population in the metropolis, it should be borne in mind that in most of the European States the capital is but one of many populous cities, and in some instances is by no means the most populous. In Australia, on the other hand, the metropolis is in every instance the most populous city, and, in some of the States, is also the only town of considerable magnitude.

In the following table will be found particulars of all localities in the Commonwealth returned at the date of the Census, on 3rd April, 1911, as having a population of over 3000. From this it will be seen that there were, in all, 29 localities in the Commonwealth returned as having a population upwards of 20,000. Of these 11 were in New South Wales, 13 in Victoria, 1 in Queensland, 1 in South Australia, 1 in Western Australia and 2 in Tasmania.

The figures given in this table relate to the localities specified as defined by the residents therein. It must be understood that no clearly defined boundaries exist in these cases, and the population given for any locality represents the number of persons who returned themselves as belonging to that locality. For the population within the boundaries of the principal Local Government Areas in the States, reference should be made to paragraph 3 following.

Many of the towns contained in the foregoing table are credited with population which is not really urban in character, owing to the fact that in the compilation of this table all persons stating that they resided in a given town were classed as part of its population, although certain of them may have dwelt a considerable distance from its business centre. For the purpose of providing a more satisfactory comparison of the urban populations of the several States, the following table has been compiled from the 1911 Census data, shewing the area and population of incorporated districts of an urban character. The incorporated areas included consist solely of those of the type of boroughs having a population of 2,500 and upwards. In all the States except Tasmania, the local government areas, although variously designated, are divided into two types—(a) boroughs (mainly urban), (b) shires (almost entirely rural). In the case of Tasmania,

Hobart and Launceston correspond to the "borough," type, but several of the other "municipalities" contain towns which, under the scheme in force in the other States, would be classed as boroughs, and are certainly urban in character. Six of these, viz.—Beaconsfield, Burnie, Devonport, Newtown, Queenstown and Zeehan, have consequently been included at the figures shewn for them as localities, and an area of four square miles (2,560 acres) has been arbitrarily adopted for each. In all other cases the areas are those of the incorporated districts concerned.

### URBAN POPULATION OF AUSTRALIA, 3rd APRIL, 1911.

State.	Urban Area.	Population of Urban Area.		
		Number.	Average per Acre.	Percentage on Total Population.
	Acres.			%
New South Wales ...	571,215	903,254	1.58	54.85

Commonwealth ...	921,150	2,171,226	2.36	48.74

3. **Municipal Population.**—In the following table the population of the Local Government Areas in the several States will be found set out. It includes only those areas having upwards of 5000 in population.

By the term "Local Government Areas" is meant those districts which have been incorporated for municipal purposes, and are variously known in the several States as Cities, Towns, Boroughs, Shires, Municipalities, Corporations, District Councils and Road Districts.

§ 7. Assisted Immigration.

In the earlier days of settlement in Australia, State-assisted immigration played an important part. Such assistance ceased for the time being in Victoria in 1873, in South Australia in 1886, and in Tasmania in 1891. In New South Wales, general State-aided immigration was discontinued in the year 1887, but those who arrived under that system and were still residing in New South Wales might, under special regulations, send for their wives and families. A certain amount of passage money, graduated according to the age of the immigrant, was required to be paid in each case. Under the provisions of these regulations, immigrants to the number of 1994 received State assistance during the years 1888 to 1899 inclusive. From 1900 to 1905 no assistance of any kind was given, but from 1906 onwards assistance has again been afforded. In Queensland and Western Australia, such assistance, although varying considerably in volume from year to year, has been accorded for many years past. Assistance to immigrants, which in the case of Victoria, had practically ceased in 1873, has recently been again afforded. In South Australia the principle of State assistance was again introduced in 1911, and in Tasmania in 1912.

The number of assisted immigrants for the years 1912 to 1917, and the total from the earliest times up to the end of 1917, are given in following table:—

ASSISTED IMMIGRANTS DURING THE YEARS 1912 to 1917, AND UP TO THE END OF 1917.

## § 8. Enumerations and Estimates.

1. **Musters.**—Actual enumerations of Australia's population, of varying accuracy, have been made from the earliest times onward. Originally known as "Musters," these were first undertaken with a view to estimating the food and other requirements of the settlements. These musters, the results of which are said to have been very unreliable, appear to have been carried out at least annually from 1788 to 1825, when they were discontinued.

2. **Census-taking.**—The first regular Census in Australia was that of New South Wales, in November, 1828. The dates on which Censuses have been taken in the several States, and the populations enumerated thereat, are shewn in the table on the next page.

3. **The Census of 1901.**—A conference of the Government Statisticians of Australia and New Zealand, held in Sydney in February and March, 1900, aimed at securing uniformity in the collection and compilation of the Census of 1901. The householder's schedule which it drafted made provision for the collection of information in all the States under the following heads, viz.: Name, Sex, Age, Conjugal Condition, Relation to Head of Household, Occupation, Sickness and Infirmary, Birthplace, Length of Residence in Colony, Religion, Education, Materials of Houses and Number of Rooms. In addition to these, it was agreed that States so desiring might include further inquiries relating to Land, Live Stock, Crops, and certain other matters.

Provision was made for uniformity in the classification and compilation of the data by formulating rules for dealing with cases in which differences of opinion as to methods of treatment might exist. Thus, although conducted by six different States, the Census of the Commonwealth, as taken in 1901, was carried out on a fairly uniform plan, and consequently furnished data, in many ways suitable for purposes of aggregation or comparison. A detailed examination of the results, however, gives many indications of departure from a common line of action, which, in the absence of a central authority, can hardly be avoided in an undertaking of this nature.

4. **The Census of 1911.**—Under Section 51, sub-section (xi.) of the Constitution Act, power is given to the Parliament of the Commonwealth to make laws with respect to "Census and Statistics." This power was brought into requisition in 1905, when the Census and Statistics Act of 1905 became law, being assented to on 8th December, 1905. Under this Act provision is made for the appointment of a Commonwealth Statistician and amongst other duties that officer is charged with the taking of a Census in the year 1911 and in every tenth year thereafter.

The particulars which the Act requires to be included in the Census schedule are almost identical with those which were contained in the 1901 schedule, the principal alterations being that "Length of Residence in Australia" is specified instead of "Length of Residence in the Colony of Enumeration," that "Duration of Marriage" has to be asked in all cases, and that nationality has to be ascertained in addition to birthplace. The Census was taken as at 3rd April, 1911.

In each State a Census supervisor was appointed to control the collection within that State under the direction of the Commonwealth Statistician. Each State was then divided into Census districts, each of which was placed in the charge of an enumerator, and each Census district was further subdivided into collectors' districts, one collector for each district.

It should be noted, in connection with the Census of 1911, that a slight change in defining the date of reference has been made in order to accord with the English practice. In previous Australian censuses the date of the Census has been taken to be that of the day preceding the midnight which is adopted as the determining point. Thus, at the Census of 1901, where the figures given relate approximately to midnight between the 31st March and the 1st April, the Australian Census was stated to be that of the 31st March, while in a precisely similar case in England it was stated to be that of 1st April.

At the Census of 1911, taken as at midnight between the 2nd and 3rd April, the date of the Census has, in accordance with the English practice, been stated to be the 3rd April, and that day was gazetted as the day of the Census.

The total populations enumerated at the several Australian Censuses are shown in the following table:—

(a) Including Port Phillip District, which afterwards became the Colony of Victoria. (b) Previously included with New South Wales. (c) 3rd April. (d) 5th April. (e) 31st March. (f) 3rd April. (g) Federal Territory, previously included with New South Wales. (h) Northern Territory, previously included with South Australia.

5. Estimates of Population.—In the absence of an annual enumeration of the population, it becomes necessary to adopt some method of estimating it for intercensal periods, basing such estimates on the results of the most recent Censuses. The manner in which

this is effected varies, however, in different parts of the world. In England, for example, the assumption usually made is that the rate of increase of the preceding intercensal period will continue unchanged during the current period. Again, in the United States, it has been assumed, in certain cases, that the numerical increase per annum ascertained for the preceding intercensal period will hold good for the current period. From the earliest times in Australia, "statistics of fluctuation" have been obtained from the records of births, deaths, arrivals and departures. With reasonable thoroughness in the collection of such statistics, the deduced estimates possess much greater weight than those based on the mere assumption of a continuation of the increase experienced in the preceding period. In most cases, however, estimates of population, based on statistics of fluctuation, are found to be in excess at the Census, thus furnishing evidence of a uniform tendency to over-estimation, and indicating the necessity for a correction. In the population figures given in the earlier portion of the present section, the estimates of the population of the several States have been carefully revised, the results of the various Censuses being taken in conjunction with the records of births, deaths, arrivals and departures. It is believed that by this means the population of the Commonwealth from the date of settlement onwards has been obtained with a high degree of accuracy, and that the figures supplied represent a reasonably close approximation to the actual numbers. A detailed account of the adjustment for the decennium 1901-10 will be found on pp. 112-118 of Year Book No. 6. Particulars for the several States from the date of settlement onwards are given in the following tables, and are shewn by graphs on pages 145 to 147:—

\* Details as to sex not available for earlier quinquennial dates. † Previously included with New South Wales. ‡ Previously included with South Australia.

The tables on the two preceding pages, shewing the quinquennial and other figures for the male, female, and total population of each State and the Commonwealth, give sufficient indication, for general purposes, of its progress. A reference to the diagrams given hereinafter (pp. 145 to 147), on which the graphs shew the particulars for *each* year, is also desirable. The characteristics of the fluctuations of each element, or of the totals, will be more readily perceived by reference to the graphs than they possibly can by reference to these numerical tables. The earliest date for which particulars as to sex were available is 1796. The figures from 1788 to 1825 inclusive, as already mentioned, are based upon the results of the musters taken in those years; those for subsequent years are founded upon estimates made on the basis of the Census results and the annual returns of births and deaths and immigration and emigration.

The following table furnishes particulars relative to the increase of population of the Commonwealth during each decade, and the percentage of such increase on the population at the commencement of the decade:—

#### INCREASE OF COMMONWEALTH POPULATION.

Decade ended 31st December.	Increase during Decade—

### § 9. Census of 3rd April, 1911.

1. **Numbers Enumerated.**—As already mentioned, the Census for the whole of the Australian Commonwealth was taken as for the night between the 2nd and the 3rd of April, 1911, and was the first Census under the provisions of the Commonwealth Census and Statistics Act 1905, which provides for the enumeration of the whole of Australia being dealt with from one centre, instead of each State being responsible for its own count as on previous occasions. The numbers recorded in the several States and Territories of the Commonwealth were as follows:—

#### POPULATION OF THE COMMONWEALTH, 3rd APRIL, 1911. (EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)

States and Territories.	Males.	Females.	Persons.
<b>States—</b>			
New South Wales ...	857,698	789,036	1,646,734
Victoria ...	655,591	659,960	1,315,551
Queensland ...	329,506	276,307	605,813
South Australia ...	207,358	201,200	408,558
Western Australia ...	161,565	120,549	282,114
Tasmania ...	97,591	93,620	191,211
<b>Territories—</b>			
Northern ...	2,734	576	3,310
Federal ...	992	722	1,714
<b>Total Commonwealth</b> ...	<b>2,313,035</b>	<b>2,141,970</b>	<b>4,455,005</b>

2. **Growth during last Three Decennia.**—The total increase of population of the Commonwealth between the Census of 31st March, 1901, and that of 3rd April, 1911, was 681,204, of which 335,107 were males and 346,097 were females, as compared with a total increase of 599,409, comprising 273,889 males and 325,520 females, for the preceding ten years. The population of each sex enumerated at the Censuses of 3rd April, 1881, 5th April, 1891, 31st March, 1901, and 3rd April, 1911, was as follows:—

**POPULATION OF COMMONWEALTH AT LAST FOUR CENSUSES.**

(EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)

Date of Census.	Males.	Females.	Persons.	(a) Masculinity.
3rd April, 1881 ... ..	1,214,913	1,035,281	2,250,194	7.98
5th April, 1891 ... ..	1,704,039	1,470,353	3,174,392	7.36
31st March, 1901 ... ..	1,977,928	1,795,873	3,773,801	4.83
3rd April, 1911 ... ..	2,313,035	2,141,970	4,455,005	3.84

(a) Excess of males over females per 100 of population.

The increases in the populations of the several States during the past three inter-censal periods have been as follow:—

**INTERCENSAL INCREASES IN THE TOTAL POPULATION.**

State and Territory.	1881-1891.		1891-1901.		1901-1911.	
	Numerical.	Per cent.	Numerical.	Per cent.	Numerical.	Per cent.
N.S. Wales (a) ... ..	374,129	49.90	230,892	20.54	293,602	21.67
Victoria ... ..	278,274	32.30	61,230	5.37	114,481	9.53
Queensland ... ..	180,193	84.39	104,411	26.52	107,684	21.62
South Australia ... ..	39,119	14.15	42,813	13.57	50,212	14.01
West. Australia ... ..	20,074	67.57	134,342	269.86	97,990	53.22
Tasmania ... ..	30,962	26.76	25,808	17.60	18,736	10.86
N. Territory ... ..	1,447	41.93	(b)— 87	(b)— 1.78	(b)—1,501	(b)—31.20
Commonwealth ... ..	924,198	41.07	599,409	18.88	681,204	18.05

(a) Including Federal Territory. (b) Decrease.

For the Commonwealth as a whole, the increase in population during the decennium 1901-11 was greater by 81,795 than that for the decennium 1891-1901. The rate of increase per cent. was, however, not so great, being 18.05 per cent. for 1901-11, as against 18.88 for 1891-1901. The former corresponds to an increase of 1.67 per cent. per annum, the latter to an increase of 1.74 per cent. per annum.

As regards the separate States, the numerical increases in the case of New South Wales, Victoria, Queensland and South Australia were greater for 1901-11 than for 1891-1901. On the other hand, Western Australia and Tasmania experienced greater numerical increases in the earlier than in the later decennium, while the Northern Territory, which exhibited an actual loss of population in both decennia, experienced a much heavier loss in 1901-11 than in 1891-1901. In the matter of rates of increase per cent. New South Wales, Victoria and South Australia were higher in 1901-11 than in 1891-1901, while Queensland, Western Australia and Tasmania were lower, and the rate of decrease in the Northern Territory was much heavier.

### § 10. Principal Results of Census of 1911.

1. **Census Results.**—In the first issue of the Official Year Book tables are given shewing in some detail particulars concerning the Census of 1901 for the several States under the headings of Ages, Birthplaces, Occupations, Religions, and Conjugal Condition. (See Year Book No. 1, pp. 164 to 179.) In the Official Year Book No. 6, pp. 143 to 171, similar and a few additional particulars appeared as to the Census of 3rd April, 1911. In the following tables this information is given in a condensed form.

2. **Ages.**—The numbers of persons of each sex at each age enumerated in the several States of the Commonwealth at the Census of 3rd April, 1911, are as follows:—

3. **Birthplaces.**—In the next table particulars are given of the populations of the several States of the Commonwealth on 3rd April, 1911, classified according to sex and birthplace, the birthplaces being grouped under the five continental divisions of the globe, with two additional headings for those born in Polynesia, and those born at sea. Of the total population of 4,455,005, those of unspecified birthplace numbered 30,470, or slightly less than 7 per thousand:—

4. **Occupations.**—In the compilation of the results of the Census of 3rd April, 1911, the populations of the several States and Territories were tabulated according to occupation in the following classes:—

(i.) *Professional.* Embracing all persons not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the moral, intellectual, and social wants of its inhabitants.

(ii.) *Domestic.* Embracing all persons engaged in the supply of board and lodging, and in rendering personal services for which remuneration is usually paid.

(iii.) *Commercial.* Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

(iv.) *Transport and Communication.* Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

(v.) *Industrial.* Embracing all persons not otherwise classed who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available

for the various uses of man, but excluding, as far as possible, all who are mainly or solely engaged in the service of commercial interchange.

(vi.) *Agricultural, Pastoral, Mineral, and other Primary Producers.* Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

(vii.) *Independent.* Embracing all persons of independent means having no specific occupation.

(viii.) *Dependents.* Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others, not otherwise engaged in pursuits for which remuneration is paid, and all persons depending upon private charity, or whose support is a burthen on the public revenue.

Particulars concerning the number contained in each of these classes are given in the table hereunder:—

5. **Religions.**—In the Act under which the Census of 1911 was taken in the several States, persons enumerated were required under penalty to furnish replies to all the inquiries contained in the schedule, with the exception of that relating to religion. In this case, any person objecting to give such particulars was allowed to insert the words "Object to state" in the space provided for religion. Of the total population of 4,455,005 there were 83,003, or 1.86 per cent., who availed themselves of this option. There were also 36,114, or 0.81 per cent., concerning whom no particulars as to religion were obtained.

Of the remainder, 4,274,414, or 95.95 per cent., were members of the various Christian denominations, 36,785 were members of non-Christian religions, 14,673 were of indefinite religious belief, and 10,016 stated that they were of no religion.

Amongst the Christian denominations, that most numerously represented was the Church of England, with 1,710,443 adherents, the next in order being the Roman Catholic (921,425), the Presbyterian (558,336), the Methodist (547,806), the Baptist (97,074), the Congregational (74,046), the Lutheran (72,395), the Church of Christ (38,748), and the Salvation Army (26,665).

The principal non-Christian religions represented in Australia were the Hebrew, Confucian, Mohammedan and Buddhist, the members of the Hebrew congregation totalling 17,287.

Those included under the head of "Indefinite" in the attached table consist mainly of persons who stated that they were "Freethinkers" or "Agnostics," or returned themselves as being of "No Denomination," while under the head of "No Religion" are given those who were so returned on the schedules as well as a small number who stated that they were "Atheists."

**AUSTRALIAN POPULATION at 3rd APRIL, 1911, CLASSIFIED ACCORDING TO RELIGION.**

The accompanying table furnishes for the Censuses of 1891, 1901, and 1911, a comparison of the numbers recorded in the principal denominations and religions. An unsatisfactory feature of the table is the large number who stated their religion simply as "Protestant" or "Catholic." Presumably, the majority of the latter were "Roman Catholic," but an appropriate allocation of the undefined Protestants could not readily be made. The returns for 1911 included no fewer than 109,861 Protestants (undefined) and 75,379 Catholics (undefined).

**POPULATION OF THE COMMONWEALTH AT THE CENSUSES of 1891, 1901, and 1911,  
CLASSIFIED ACCORDING TO RELIGION AND SEX.**

7. **Education.**—In the following table are contained particulars of the education of the population of the States and Territories of the Commonwealth as at the date of the Census of 3rd April, 1911. Of the total population of 4,455,005, there were 3,650,030, or 81.93 per cent., who were able to read and write in the English language, and 26,210, or 0.59 per cent., who were able to read and write in a foreign language, though unable to read or write English. Of the remainder no fewer than 525,633 were recorded as being under five years of age, all of whom were classed at the Census under the head of "Cannot read."

### EDUCATION OF THE POPULATION OF THE STATES AND TERRITORIES OF THE COMMONWEALTH OF AUSTRALIA

GRAPHS OF TOTAL POPULATION OF THE COMMONWEALTH OF AUSTRALIA  
AND EACH STATE THEREIN, 1788-1917.

(See Tables pages 102 to 104.)

**EXPLANATION OF GRAPHS.**—The base of each small square represents two years' interval for both States and Commonwealth; and the vertical height 80,000 persons for Commonwealth or 20,000 for States. The zero line for the States is the bottom line; for the Commonwealth it is the line marked "Commonwealth." The scale on the left above the Commonwealth zero line relates to the Commonwealth, and that on the right relates to the States.

Where the population falls suddenly the fall denotes the creation of a new colony, e.g., New South Wales 1825, loses the whole population of Tasmania, then erected into a separate colony.

The curves are as follows:—Commonwealth, an unbroken line; New South Wales, — — — — —; Victoria, — — — — —; Queensland, — — — — —; South Australia, — — — — —; Western Australia, — — — — —; Tasmania, — — — — —; the names on the curves also shew which State each represents.

From 1860 onwards is shewn, for the purpose of comparison, the manner in which the population of the Commonwealth would have grown from 1860 to 1914 if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860.

GRAPHS OF MALE AND FEMALE POPULATIONS, COMMONWEALTH OF AUSTRALIA, 1796-1917.

(See Tables pages 102 to 104.)

**EXPLANATION OF GRAPHS.—1796-1860.** The base of each small square represents two years' interval, and the vertical height 50,000 persons. The distances upward from the zero line denote the number of males, and downward the number of females.

**1860 onward.** The base of each small square represents one year's interval, and the vertical height 100,000 persons.

From 1860 onward is shewn, for purposes of comparison, the manner in which the numbers of each sex in the Commonwealth would have grown from 1860, if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860.

The asymmetry of the two series of graphs reveals the want of uniformity in the increase of the two sexes.

# GRAPHS OF MALE AND FEMALE POPULATION OF THE STATES OF AUSTRALIA, 1796-1917.

(See Table page 102.)

## EXPLANATION OF GRAPHS.

1796-1860.—The base of each small square represents two years' interval, and the vertical height 20,000 persons. The distances upward from the zero line represent the number of males, and downward the number of females.

The sudden falls denote the creation of new colonies.

1860 onward.—The base of each small square represents one year's interval, and the vertical height 50,000 persons.

The names on the curves denote the States to which they refer, and the curves are as follows:—New South Wales, — — —; Victoria, — — — —; Queensland, — — — — —; South Australia, — — — — —; Western Australia, — — — — —; Tasmania, — — — — —.

The asymmetry of the two series of graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS ~~SHOWING~~ TOTAL INCREASE OF POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND THE STATES OF NEW SOUTH WALES AND VICTORIA, 1860-1917.

(For explanation see foot of next page.)

GRAPHS SHEWING TOTAL INCREASE OF POPULATION OF THE STATES OF QUEENSLAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA, 1860-1917.

EXPLANATION OF GRAPHS SHEWING NET INCREASE.—The base of each small square represents an interval of a year for both States and Commonwealth; the vertical height represents 5000 for the Commonwealth and the States. In the first graph (on page 148) three zero lines are taken (i.) for the Commonwealth, (ii.) for New South Wales, and (iii.) Victoria. In the second graph four zero lines are taken (i.) for Queensland, (ii.) for South Australia, (iii.) for Western Australia, and (iv.) for Tasmania.

DECREASES in population are shown by carrying the graph in such cases below the zero line, the distance of the graph below the zero line indicating the extent of the decrease. The scales in these instances are on the right hand of the graph.

The names above the curves denote the States to which they belong.

(See Table page 119.)

GRAPHS OF NATURAL INCREASE OF THE POPULATION OF THE COMMONWEALTH  
AND STATES OF AUSTRALIA, 1860-1917.

EXPLANATION OF GRAPHS.—The base of each small square represents one year for both States and Commonwealth, and the vertical height 1000 persons for the States and 2000 persons for the Commonwealth.

The distances upward from the zero line, marked 0 for both Commonwealth and States, denote the excess of births over deaths. The scale on the left relates to the Commonwealth, and that on the right to the States. The names shew the States to which the curves refer, they are as follows:—Commonwealth ———; New South Wales, ———; Victoria, ———; Queensland, ———; South Australia, ———; Western Australia, ———; Tasmania, ———.

(See Table page 115.)

GRAPHS SHEWING MASCULINITY OF THE POPULATION OF THE  
COMMONWEALTH AND STATES OF AUSTRALIA, 1796-1917.

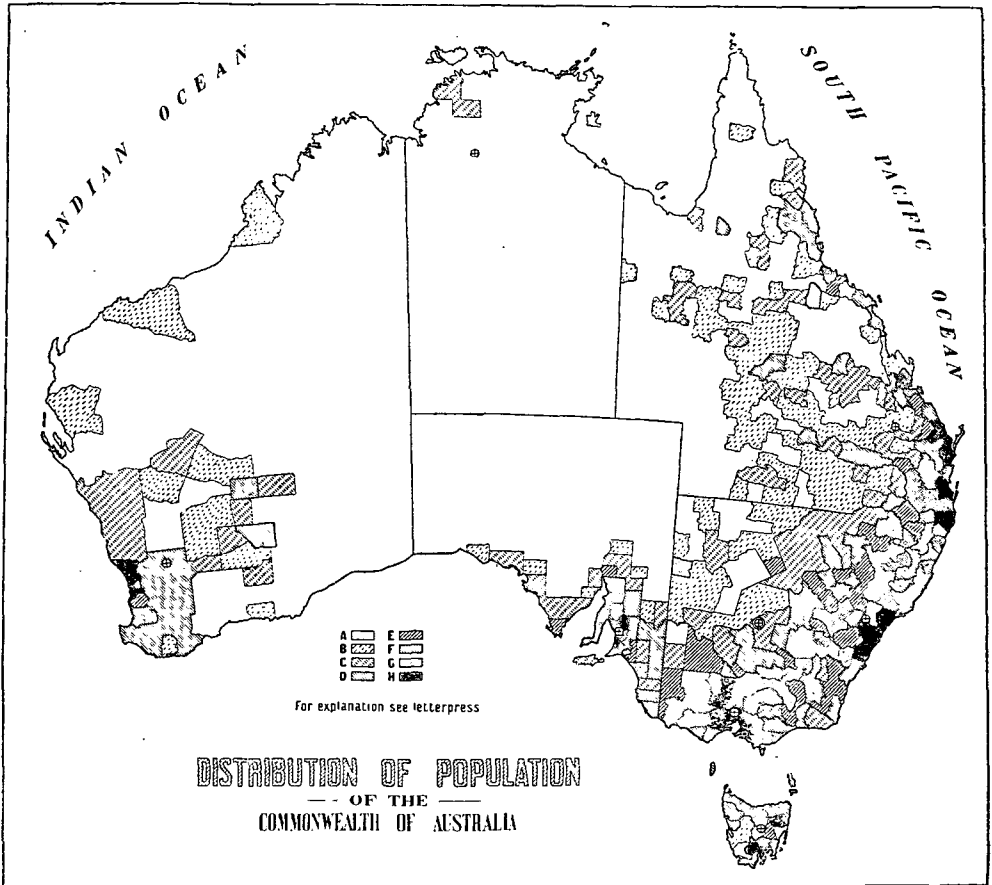

(See Table page 107.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of two years and the vertical height an excess of five males per 100 of population. The basic lines (shewn thickened) for Commonwealth and all the States are at zero, equivalent to a numerical equality of the sexes.

It will be noticed that in the case of New South Wales, Tasmania, and the Commonwealth in the years 1916 and 1917, Victoria in the years 1903 to 1912 and 1914 to 1917, and South Australia in the years 1902 to 1904 and 1914 to 1917, the curves are below the zero line, thus shewing an excess of females over males.

DISTRIBUTION OF POPULATION THROUGHOUT THE COMMONWEALTH OF  
AUSTRALIA, ACCORDING TO CENSUS OF 1911.

The map above furnishes a graphic representation of the distribution of the population of the Commonwealth at the date of the census of 1911. For this purpose the density of the population has been computed for the counties of each State, and the areas representing these counties have been shaded in accordance with the following scale of density:—

A	—Less than 1 inhabitant to 16 sq. miles	
B	—From 1 inhabitant in 16 sq. miles to less than 1 in 4 sq. miles	
C	— " 1 " " 4 " " 1 in 1 sq. mile	
D	— " 1 " " 1 sq. mile " 2 in 1 " "	
E	— " 2 inhabitants in 1 " " 4 in 1 " "	
F	— " 4 " " 1 " " 8 in 1 " "	
G	— " 8 " " 1 " " 16 in 1 " "	
H	—16 inhabitants and upwards in 1 square mile	

Small circles with cross in each State represent the "centre of gravity" of the population for each State.

From the following table, which gives for the Commonwealth as a whole, particulars of education in conjunction with age, it will be seen that the major portion of those who were unable to read were under the age of 9. Of persons aged 20 and upwards only about 2½ per cent. were unable to read.

**POPULATION OF THE COMMONWEALTH OF AUSTRALIA AT THE CENSUS OF  
3rd APRIL, 1911, CLASSIFIED ACCORDING TO EDUCATION AND AGE.**

(EXCLUSIVE OF FULL-BLOODED ABORIGINALS.)

## § 11. Naturalisation.

1. **The Commonwealth Act.**—The Commonwealth Constitution empowers the Commonwealth Parliament to make laws with respect to “Naturalisation and Aliens,” a power which was exercised when the “Naturalisation Act of 1903” was passed. This Act was assented to on 13th October of that year, and came into force on 1st January, 1904, in accordance with a proclamation by *Gazette* of 14th November, 1903.

Prior to the passing of this Act the issue of certificates of naturalisation had been a function of the State Governments, carried out under Acts of the several State Legislatures, which, however, did not differ materially from each other, and furnished the basis on which the Commonwealth Act was drafted. From 1st January, 1904, when the Commonwealth Act became operative, the right to issue certificates of naturalisation in the Commonwealth has been vested exclusively in the Federal Government, but all certificates or letters of naturalisation issued under the several State Acts prior to that date entitle the recipients to be deemed to be naturalised under the Commonwealth Act.

The grant of a certificate of naturalisation entitles the recipient within the limits of the Commonwealth to all the rights and privileges, and renders him subject to all the obligations, of a natural-born British subject, with the exception that where, by any Commonwealth or State Constitution or Act, a distinction is made between natural-born British subjects and naturalised persons, such distinction shall hold good in the case of all persons naturalised under the Commonwealth Act.

Applications for certificate of naturalisation must be made to the Governor-General, the qualifications required in an applicant being :—

- (i.) That he is not a British subject.
- (ii.) That he is not an aboriginal native of Asia, Africa, or the Islands of the Pacific, excepting New Zealand.

- (iii.) That he intends to settle in the Commonwealth.
- (iv.) (a) That he has resided in Australia continuously for two years immediately preceding naturalisation ; or
- (b) That he has obtained in the United Kingdom a certificate or letters of naturalisation.

An applicant who has already obtained a certificate or letters of naturalisation in the United Kingdom is required to furnish, in support of his application—

- (i.) His certificate or letters of naturalisation.
- (ii.) His statutory declaration—
  - (a) That he is the person named therein.
  - (b) That he obtained the certificate or letters without fraud or intentional false statement.
  - (c) That the signature and seal thereto are, to the best of his knowledge and belief, genuine.
  - (d) That he intends to settle in the Commonwealth.

If the applicant is not already naturalised in the United Kingdom the particulars which he is required to furnish in support of his application are as follows:—

- (i.) His own statutory declaration stating—
  - (a) Name; (b) Date of birth; (c) Birthplace; (d) Occupation; (e) Residence; (f) Length of residence in Australia; (g) Intention to settle in the Commonwealth.
- (ii.) A certificate signed by a Justice of the Peace, a postmaster, a teacher of a State school, or an officer of police, that the applicant is known to him and is of good repute.

In connexion with any application for naturalisation, the Governor-General in Council is authorised to grant or withhold a certificate as he thinks most conducive to the public good, but the issue of a certificate to any person who is not already naturalised in the United Kingdom is not admissible until the applicant has taken an oath or affirmation of allegiance. The grant of a certificate is made free of charge.

In addition to naturalisation by grant of certificate, the Act makes provision for—

- (i.) Naturalisation by marriage.
- (ii.) Naturalisation by residence with naturalised parent.

The former relates to the case of a woman who is not herself a British subject, but is married to a British subject; the latter to that of an infant who is not a natural-born British subject, but who has resided at any time in Australia with a father or mother who is a naturalised British subject. In each instance the person concerned is deemed to be naturalised under the Commonwealth Act.

The administration of the Act is carried out by the Home and Territories Department, and the Governor-General is authorised to make such regulations as are necessary or convenient for giving effect to the Act.

**2. Statistics of Naturalisation.**—Particulars relative to the nationalities of the recipients of certificates of naturalisation issued under the Act during each of the five years 1912 to 1916, and to the countries from which such recipients had come, are shewn in the following table:—

## COMMONWEALTH NATURALISATION CERTIFICATES GRANTED, 1912 to 1916.

3. Census Particulars.—On the Personal Card used at the Census of 3rd April, 1911, an inquiry as to naturalisation was made, all persons who were British subjects by naturalisation being required to indicate the fact by inserting the letter N in the place provided for the purpose on the card. In addition, in checking the cards in the Census Bureau, instructions were given that cases of women naturalised by marriage to British subjects, and of children naturalised by residence with parents who have become British subjects, should be duly taken into account by the insertion of the letter N if originally omitted. The results of the tabulation will be found in the following table :—

**NUMBER OF NATURALISED BRITISH SUBJECTS**  
**RECORDED AT THE AUSTRALIAN CENSUS OF 3RD APRIL, 1911.**

## § 12. Graphical Representation of Growth of Population.

1. **General.**—The nature of the fluctuations of the numbers representing (a) total population, or those representing (b) births and deaths from year to year, or (c) the natural increase, *i.e.*, the difference of births and deaths, or (d) the net immigration, all of which taken together make up the element of increase of total population, cannot be readily discerned from mere numerical tables. It has been deemed desirable therefore to furnish a series of graphical representations, shewing in some cases the characteristics of these elements from 1788 to 1917, and in others from 1860 to 1917. The graphs furnish at a glance a clear indication of the changes taking place, and of their significance from year to year. The great importance of such representations is that only by their means can the most recent changes be justly apprehended, either in their relation to the past, or their meaning for the future.

2. **Graphs of Total Population** (page 145).—These graphs furnish interesting evidence of the comparatively slow rate of growth of the several States and of the Commonwealth as a whole, during the period from the foundation of settlement in 1788 until 1832. From that year onwards to 1851, a moderately increased rate of progress was experienced. In 1851 gold was discovered in Australia, and the effect of this discovery on the population of the Commonwealth is shewn by the steepness of the curves for New South Wales and Victoria, and also for the Commonwealth, from this point onwards for a series of years. The sudden breaks in the continuity of the curves for New South Wales indicate the creation of new colonies, and their separation from the mother colony. Thus, Tasmania came into existence in 1825, Victoria in 1851, and Queensland in 1859. Owing to the extensive gold discoveries in Victoria, its population increased so rapidly that in 1854 its total passed that of New South Wales, and remained in excess until 1892, when the mother State again assumed the lead, which it has since maintained. The rate of increase in New South Wales is large, but the State is still only sparsely populated. A feature of the New South Wales curve is its comparative regularity as compared with that of Victoria, the population of which State increased with great rapidity from 1851 to 1860, less rapidly from 1861 to 1878, with a further period of increased rapidity from 1878 to 1891, and a period of very slow and fluctuating growth from the latter year to 1914. In 1915 and 1916 the population decreased, but in 1917 an increase was again recorded. Victoria, however, has a population density more than double that of Tasmania, and nearly three times that of New South Wales.

In the case of Queensland, the curve indicates a rate of growth which, though varying somewhat, has on the whole been satisfactory, and at times very rapid. Periods of particularly rapid increase occurred from 1862 to 1865, from 1873 to 1877, and from 1881 to 1889. With the exception of the year 1916 the population of this state has always increased each year up to 1917. The population of Queensland passed that of Tasmania in 1867, and that of South Australia in 1885. The population density of Queensland is one-sixteenth of that of Victoria.

The curve for South Australia indicates that with fluctuations more or less marked, the population increased at a moderate rate from the date of the foundation of the colony in 1834 until 1884, and that from that point onwards, a diminished rate of increase was experienced, with slight decreases in 1886, 1888, 1900, 1902, 1915 and 1916. The population of South Australia passed that of Tasmania in 1852. Its density is nearly one and one-fifth of that of Queensland, about one-fifth of that of New South Wales, and about one-fourteenth of that of Victoria.

The curve for Western Australia indicates that the population increased regularly but very slowly until 1886, when the discovery of gold in the Kimberley division caused an influx of population. The effects of the further rich discoveries of gold in the Murchison and Coolgardie districts in 1891 and 1892, are clearly shewn in the rapid increase of population in those and subsequent years to 1897. Two years of retarded progress then occurred, followed by a satisfactorily rapid rate of increase from 1899 to 1906, a slight decline in 1907 and a further advance in 1908 and subsequent years to 1914. Decreases occurred in 1915 and 1916, with an increase in 1917. The population of Western Australia became greater than that of Tasmania in 1899. Its density is little more than one-fourth of that of South Australia, one-third of that of Queensland, one-nineteenth of that of New South Wales, and about one-fiftieth of that of Victoria.

The Tasmanian population curve indicates a comparatively slow rate of growth throughout. Its most noticeable feature is a retardation in increase in 1852 and subsequent years, brought about by the discovery of gold on the mainland. The population density of Tasmania is about 30 per cent. greater than that of New South Wales, and a little less than half of that of Victoria.

**3. Graphs for Commonwealth of Male and Female Population** (page 146).—These curves shew the relative growth of male and female population of the Commonwealth, and it will be seen that the former are far more liable to marked fluctuations than the latter. The curves representing an increase of population on the basis of the United States rate for 1790 to 1860, indicate that on the whole the female rate of increase in the Commonwealth has been a fairly satisfactory one, and that from 1860 to 1893 the same might be said of the male population. From 1893 onwards, however, the male population of the Commonwealth has fallen considerably below this rate.

Although the rate of increase of the female population from 1860 onwards is on the whole very satisfactory, it should be noted that the total number at the beginning of this period was relatively very small, and that from 1894 onwards there is a falling-off in the rate of increase, similar to that experienced in the case of males.

**4. Graphs for each State of Male and Female Population** (page 147).—These graphs, shewing the relative progress in male and female population for each of the States, disclose the fact that in all cases the female population is much less liable to marked fluctuations than the male, and further, that in cases where rapid increases have taken place in the latter, a similar, but much more gradual, increase is in evidence in the former, commencing usually, however, somewhat later than in the case of the males. A comparison of the graphs of each of the States with that of the Commonwealth shews that the fluctuations in the latter case are smaller than in the former. This is largely due to internal migrations of the male element of the population, brought about by various causes, amongst which mining developments figure prominently.

**5. Graphs for Natural Increase of Population, Commonwealth and States** (page 150).—The graphs indicate that, with the exception of certain marked variations, the natural increase of the population of the Commonwealth, i.e., the excess of births over deaths, advanced with fair rapidity from 1860 to 1892, in which year it attained its maximum, and then fell rapidly till 1898. A subsequent rise to 1900 was followed by a continuous fall for the three years succeeding, viz., to 1903. The recovery shews a fairly rapid rise to 1909, during which year the natural increase was 16.35 per 1000 of mean population. In succeeding years a correspondingly high rate was maintained with minor

fluctuations until 1914, when a record of 17.54 was obtained. In 1915 and 1916 the rate declined to 16.59 and 15.74 respectively, but improved to 16.71 in 1917. In 1912 a rate of 17.42 was obtained; this was, however, an over-statement of the true natural increase for the year, owing to the fact that the introduction of "Maternity Allowances" in 1912 resulted in expediting the registration of births. The years in which the natural increase of the Commonwealth was at its highest were 1865, 1871, 1881, 1892, 1900, 1909, and 1914, and the years of extraordinarily low rates of natural increase were 1866, 1875, 1882, 1898, and 1903. The low rate of 1898 was due in large measure to a phenomenally high death rate experienced in practically all the States in that year, when an epidemic of measles was prevalent throughout the Commonwealth. The low rate of 1903 was brought about by the low birth rates and the high death rates which accompanied the drought of 1902-3, while the advance in the rate of natural increase since 1903 has been collateral with the marked improvement in material conditions experienced throughout the Commonwealth during that period.

**6. Graphs shewing Total Increase of Population** (pages 148 and 149).—The graphs disclose the fact that the most notable years of large total increases of population of the Commonwealth as a whole were 1864, 1877, 1883, 1888, 1909, 1910, 1911 and 1912. The total increase for 1910 was higher than for any year since 1883, while that for 1912 was the highest on record. The years in which low total increases were noticeable were 1861, 1867, 1872, 1878, 1889, 1893, 1898, and 1903. The decreases in the years 1915 and 1916 are a direct effect of the war.

The graph for New South Wales indicates a high total increase of population between 1876 and 1894, advancing to a maximum in 1883, and then declining to 1901. From the latter year onwards to 1907 an advance in the total increase was in evidence, followed by a decline in 1908, and a recovery in 1909, which was maintained in subsequent years to 1912. In 1913, 1914, and 1915 the figures fell continuously, followed in 1916 by a decrease.

Some features of the graph shewing the Victorian total increase are the height attained in 1864, 1870, 1888, 1901, and 1912, the smallness of the increase for the years 1861 and 1875, and the decreases for 1896, 1902, and 1903. The increase fell off in 1913 and 1914 and a decrease was experienced in 1915 and 1916.

For Queensland it will be seen that the years of high total increases were 1863, 1875, 1883, 1895, 1901, 1909, 1910, 1911, and 1913, while the years in which these were at very low level were 1869, 1878, 1891, and 1903. In 1914 and 1915 there was a progressive decline, followed by a decrease in 1916.

In South Australia the total increases were exceptionally high in 1865, 1876, 1877, 1878, 1883, 1892, 1908, 1910, 1911, and 1912, and correspondingly low in 1870, 1885, 1896, and 1903, while actual decreases took place in 1886, 1888, and 1902. In 1913 there was a slight decline in the total increase, followed by a larger one in 1914, while in 1915 and 1916 there was a decrease.

In Western Australia the total increase graph indicates no very marked advance until about 1884, from which it rises somewhat rapidly to 1886, and then declines to 1888. This is followed by an exceedingly rapid rise to 1896, and a subsequent fall to 1899, succeeded by a further rise to 1902, and a fall thereafter to 1907, followed by a rise to 1911, a further fall in 1912, and a rise in 1913. Decreases took place in 1888, 1907, 1915 and 1916.

In the case of the Tasmanian graph, indications of a very varied total increase are in evidence, the principal high points being those for the years 1887, 1891, 1897, 1902, 1907, 1912, and 1913, while actual decreases were experienced in 1874, 1875, 1892, 1906, 1911, 1914, 1915 and 1916.

7. **Graphs shewing Masculinity of Population, Commonwealth and States** (page 151).—These graphs furnish information concerning the variations which have taken place in the relative numbers of males and females in the populations of the Commonwealth and the several States during the years 1796 to 1917, and incidentally serve to indicate special features of growth in the respective populations. In general it will be noted that in recent years there has been a marked tendency towards a masculinity of zero, that is, to a condition in which the numbers of males and females in the population were equal, but that with the exception of Victoria and South Australia the masculinity had never fallen below zero prior to the outbreak of war. In 1916 and 1917, however, it fell below zero in all the States except Queensland and Western Australia, and also in the Commonwealth as a whole. The early experience of the Commonwealth exhibits a fairly rapid decline in masculinity to 1812, followed by an even more rapid rise to 1828 and a subsequent fall with more gentle slope to 1850. From 1850 onwards the decline in masculinity has been fairly continuous though subject to fluctuations. It should be noted that the marked variations of the earlier as compared with the later years have been due to a considerable extent to the fact that, owing to the smallness of the population, any considerable influx of male immigrants had a marked effect in increasing the masculinity of the population, while an influx of female immigrants tended to considerably reduce it. Two points of special interest in the graphs of the separate States are the maxima attained in 1852 in Victoria and 1896 in Western Australia, as the result of extensive male immigration consequent on the gold discoveries in the respective States.

## SECTION V.

## VITAL STATISTICS.

NOTE.—The rates quoted throughout this Section for the years 1907 to 1917 have been calculated in accordance with the corrected populations as determined by the results of the Census of 1911.

## § 1. Births.

1. Male and Female Births, 1907 to 1917.—The total number of male and female births registered in the Commonwealth during the years 1907 to 1917 is shewn in the two tables hereunder:—

## TOTAL MALE BIRTHS, COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	North. Terr.	Federal Territory.	C'wealth.

1916 ...	25,465	16,612	9,239	5,657	4,124	2,769	30	25	63,921
1917 ...	25,446	15,813	9,729	5,564	3,824	2,656	27	23	63,082

(a) Part of New South Wales prior to 1911.

2. Total Births, 1907 to 1917.—The total number of births for the Commonwealth was higher in 1914 than in any of the preceding years, but the figures for the last three years shew a falling off for the Commonwealth as compared with those for 1913 and

1914, the only States in which births were slightly more numerous in 1917 than in 1913 being New South Wales and Queensland, while every State receded from the 1914 numbers.

### TOTAL BIRTHS, COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	North. Terr.	Fed'l Terr.	C'wealth.
1907 ...	42,201	31,365	14,540	9,211	7,712	5,291	27	...	110,347

(a) Part of New South Wales prior to 1911.

3. *Birth Rates, 1907 to 1917.*—(i.) *Crude Birth Rate.* The law relating to Maternity Allowances, which came into force on 10th October, 1912, had the effect of materially diminishing the period between the dates of birth and the date of registration, so that probably 6000 births were registered during the last three months of the year which, under ordinary circumstances, would not have been registered before the beginning of 1913. The increase shewn by the 1912 birth rate over the rate for 1911 is, therefore, to some extent fictitious, and the true birth rate for the whole Commonwealth in 1912 was more probably about 27.42 per thousand than 28.65 as shewn in the subjoined table. If due allowance be made for this fact, it may be stated that the birth rate for the Commonwealth was not only higher in 1913 than in any of the preceding nine years, but that the increase which began with the year 1909, was maintained to the end of 1913, while the years 1914, 1915, 1916 and 1917 shew decreases in the rate, that for 1917 having practically receded to the 1908 level. The very high masculinity of the population accounts for the low birth rate experienced in the Northern Territory:—

### CRUDE BIRTH RATE (a), COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	North. Terr.	Federal Territory.	Cwlth.

1917 ...	28.06	23.50	29.09	26.21	25.54	27.03	13.92	17.65	26.51
Density (b) (No. per square mile) ...	6.07	16.06	1.03	1.15	0.31	7.75	0.009	2.31	1.66

(a) Number of births per 1,000 of the mean annual population. (b) On 31st December, 1917.  
(c) Part of New South Wales prior to 1911

The population density of each State and of the Commonwealth has been given for the purpose of considering the influence, if any, of concentration of population on birth rate, in connection with the disparities of the rate in different parts of Australia.

(ii.) *Objections to Crude Birth Rate.* The figures just given represent the "crude birth rate," i.e., the number of births per thousand of mean annual population. The number of births per thousand of the female population of child-bearing ages, i.e., from 15 to 45, furnishes a more significant rate. This calculation has been made for the four last Census periods, and covers in each case the Census year together with the year immediately preceding and the year immediately following. The following results have been obtained for the four Census periods:—Total births per 1000 women (married and unmarried) of ages 15 to 45:—Years 1880-82, 169.69; years 1890-92, 158.81; years 1900-02, 117.26; years 1910-12, 117.22. Nuptial births per 1000 married women of ages 15 to 45:—Years 1880-82, 320.96; years 1890-92, 332.03; years 1900-02, 235.84; years 1910-12, 236.06.

4. *Birth Rates of Various Countries.*—A comparison with other countries shews that the Australian States occupy a very low position, which is, however, fortunately counterbalanced by a still lower position in regard to their death rates, as will be seen from the table hereinafter in the section dealing with "Deaths."

#### CRUDE BIRTH RATE (a) OF VARIOUS COUNTRIES.

Country.	Year.	Rate.	Country.	Year.	Rate.
Russia, European ...	1909	44.0	Commonwealth ...	1917	26.5.
Rumania ...	1914	42.5	South Australia ...	1917	26.2
Bulgaria ...	1911	40.2	Netherlands... ..	1915	26.2
Serbia ...	1912	38.0	New Zealand ...	1917	25.6.
Ceylon ...	1915	37.0	Western Australia ...	1917	25.5
Chile ...	1914	37.0	Denmark ...	1915	24.2.
Hungary ...	1912	36.3	Ontario (Canada) ...	1915	24.2
Jamaica ...	1915	34.6	Norway ...	1915	23.8
Japan ...	1913	33.3	Victoria ...	1917	23.5.
Austria ...	1912	31.3	Scotland ...	1916	22.8

New South Wales ...	1917	28.1	England and Wales ...	1916	20.9.
German Empire ...	1913	27.5	Switzerland... ..	1915	19.5.
Tasmania ...	1917	27.0	France ...	1913	19.0
Finland ...	1914	26.9			

(a) Number of births per 1000 of the mean population.

The wide discrepancies among the crude birth rates of the various countries are, to some extent, due to differences in sex and age constitution and of conjugal condition. If the birth rates be calculated per 1000 women of child-bearing ages, the comparison shews widely different results. The report for 1908 of the Registrar-General for England and Wales contains a table shewing the nuptial births per 1000 married women of ages 15 to 45, in a number of countries, and the information here given in regard to the period 1900-1902 is taken therefrom.

## NUPTIAL BIRTHS PER 1000 MARRIED WOMEN, AGED 15-45 YEARS, 1900-1902.

Country.	Rate.	Country.	Rate.
Netherlands ...	314.6	Switzerland ...	265.9
Norway ...	302.8	Denmark ...	259.1
Prussia ...	290.4	Spain ...	258.7
Ireland ...	289.4	Belgium ...	250.7
German Empire ...	284.2	New Zealand ...	243.2
Austria ...	283.7	Commonwealth ...	235.8
Scotland ...	271.8	England and Wales ...	235.5
Italy ...	269.4	France ...	157.5
Sweden ...	269.0		

5. **Masculinity at Birth.**—The masculinity of births, i.e., the number of males per 100 females, registered during the last eleven years in the several States of the Commonwealth has, apart from the Northern Territory and the Federal Territory, the figures for which are useless for comparative purposes on account of the smallness of the returns on which they are based, varied from 99.82 in Tasmania in 1911 to 112.15 in Tasmania in 1907. The following table, which gives the values for the States and Commonwealth for 1907 to 1917, shews the remarkable fact that for the Commonwealth there was a steady increase of masculinity from 1907 to 1910, with a sharp decrease in 1911 and 1912, and slight increases in every year from 1913 to 1917.

## MASCULINITY (a) OF BIRTHS REGISTERED, COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	Northern Territory.	Federal Territory.	C'wealth.
1907 ...	104.89	103.95	105.11	103.06	105.65	112.15	107.69	...	104.89

(a) Number of males to each 100 females.

(b) Part of New South Wales prior to 1911.

There is ordinarily a very small difference between the masculinity of nuptial and ex-nuptial births. Thus, according to Bodio, whose figures are quoted in the following table, for the period about 1887-1891, the masculinity ranged from 108.3 to 103.6, and from 107.9 to 101.6 for total and ex-nuptial births respectively.

## MASCULINITY OF BIRTHS IN VARIOUS COUNTRIES.

Country.	Masculinity of Births. (a)		Country.	Masculinity of Births. (a)	
	All Live Births.	Ex-nuptial Live Births.		All Live Births.	Ex-nuptial Live Births.

1917 ...	104.53	107.50	107.10	100.00	85.80	111.94	166.67	...	104.78

(a) Number of males to each 100 females. (b) Part of New South Wales prior to 1911.

It is curious to note that while, so far as the total births are concerned, there has always been an excess of male births over female births (excepting Tasmania in 1911), this has not been the case in regard to ex-nuptial births, since in Tasmania in 1912 the masculinity was only 82.69, while on the other hand it rose as high as 145.97 in the following year. Little weight, however, can be attached to those results on account of the small totals on which they are based, and for the same reason the figures for the Northern Territory are not taken into consideration.

6. **Ex-nuptiality of Births.**—The total ex-nuptial births rose rapidly from 1905 to 1908 and remained almost stationary till 1909, when the number again decreased, so that the year 1910 shewed the lowest number recorded since 1906. During the three years 1911-13 the numbers shew a considerable increase, with further decreases in 1914, 1915 and 1916 and a slight increase in 1917. (See the table on the following page).

It is, of course, possible that the number of ex-nuptial births is somewhat understated, owing to diffidence in proclaiming the fact of ex-nuptiality, and it is not unlikely that the majority of unregistered births are ex-nuptial.

### TOTAL EX-NUPTIAL BIRTHS REGISTERED IN THE COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	North. Terr.	Fed'l Terr.	C'wealth.

(a) Part of New South Wales prior to 1911.

A comparison of greater significance is obtained by calculating the number of ex-nuptial births per thousand of the single and widowed female population between the ages of 15 and 45. The calculation has been made for the last four Census periods, and covers in each case the Census year, together with the year immediately preceding and the year immediately following. The number of ex-nuptial births per 1000 unmarried women of ages 15 to 45 has been found to be as follows:—Years 1880-82, 14.49; years 1890-92, 15.93; years 1900-02, 13.30; years 1910-12, 12.53. Corresponding figures for the countries the nuptial birth rates of which were shewn in a preceding paragraph are here given for the sake of comparison:—

**EX-NUPTIAL BIRTHS PER 1000 UNMARRIED WOMEN AGED 15-45 YEARS,  
1900 TO 1902.**

Country.	Rate.	Country.	Rate.
Austria ... ..	40.1	Spain ... ..	15.5
German Empire ... ..	27.4	Scotland ... ..	13.4
Sweden ... ..	24.3	Commonwealth ... ..	13.3
Denmark ... ..	24.2	Switzerland ... ..	9.8
Prussia ... ..	23.7	New Zealand ... ..	8.9
Italy ... ..	19.4	England and Wales ... ..	8.5
France ... ..	19.1	Netherlands ... ..	6.8
Belgium ... ..	17.8	Ireland ... ..	3.8
Norway ... ..	17.2		

(ii.) *Comparison of Rates.* Since the rate of ex-nuptiality might appear to increase by the mere decrease in the general birth rate, the following table has been prepared :—

**CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES (a), COMMONWEALTH,  
1907 TO 1917.**

Rates.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Ex-nuptial	1.64	1.64	1.60	1.54	1.57	1.58	1.55	1.48	1.40	1.28	1.30
Nuptial ...	25.12	24.95	25.09	25.19	25.64	27.07	26.70	26.57	25.85	25.50	25.21
Total ...	26.76	26.59	26.69	26.73	27.21	28.65	28.25	28.05	27.25	26.78	26.51

(a) Number of births per 1000 of mean population.

**7. Multiple Births.**—Among the total number of 129,965 births registered in the Commonwealth in 1917 there were 126,957 single births, 2954 twins, 50 triplets, and 4 quadruplets. The number of cases of twins was 1477, the number of cases of triplets 17, and the number of cases of quadruplets one. The total number of mothers was, therefore, 128,452, the proportion of mothers of twins being one in every 87, and of mothers of triplets one in every 7558 of total mothers. The proportion of multiple births is a fairly constant one. In 1907 they numbered 1043 out of a total of 109,806, or one in 105; in 1908, 1065, or one in 104; in 1909, 1142, or one in 99; in 1910, 1189, or one in 99; in 1911, 1236, or one in 98; in 1912, 1350, or one in 98; in 1913, 1369, or one in 99; in 1914, 1401, or one in 97; in 1915, 1417, or one in 94; in 1916, 1383, or one in 95; and in 1917, 1477, or one in 86. The number of cases of triplets is so small that a slight alteration in the total will completely change the proportion. Thus, there were 14 cases in 1907, or one in 7872 of total mothers, as compared with one in 18,415 in 1908; one in 8066 in 1909, one in 8893 in 1910, one in 8639 in 1911, one in 8233 in 1912, one in 16,793 in 1913, one in 12,415 in 1914, one in 13,444 in 1915, one in 10,952 in 1916, and one in 7558 in 1917. The case of quadruplets which occurred in 1917 was the first since the tabulation of Vital Statistics was undertaken by the Commonwealth Bureau of Census and Statistics.

**8. Ages of Parents.**—The relative ages of the parents of children registered in 1917 have been tabulated separately for male and female births, twins and triplets being distinguished from single births, and are shown for single ages and for every State in "Bulletin of Population and Vital Statistics, No. 34; Commonwealth Demography, 1917 and previous years." In the present work the exigencies of space allow only the insertion of corresponding tables shewing the relative ages of parents in groups of five years. It will be seen from the tables that the largest number of both single and twin births occurred where the ages of both father and mother were between 25 and 29. The largest number of mothers was found at ages 25 to 29.

## (a) AGES OF PARENTS IN CASES OF SINGLE BIRTHS, COMMONWEALTH, 1917.

\* Excluding one female stillborn.

In the case of quadruplets above-mentioned, the age of the father was 38 years, and that of the mother 34. There were three male children and one female.

No conclusions can, of course, be drawn from one year's figures as to variations in the masculinity of the births at different ages of the parents, but so far as the figures go they indicate a few particulars which may be mentioned, viz.: In cases where the father is older than the mother the masculinity has a tendency to be above the average, while in cases where both parents belong to the same age group, or where the father is younger than the mother, the masculinity is rather below the average. It is also below the average in cases where the father, or both father and mother, are under 25; and it is above the average where the mother alone is under 25.

9. **Birthplaces of Parents.**—The relative birthplaces of the parents of children whose births were registered during the year 1917 will be found tabulated in the Bulletin before-mentioned. A summary of the results of the tabulation is here given:—

11. **Mothers' Age, Duration of Marriage, and Issue.**—A tabulation has been made shewing, in age-groups, the duration of marriage and issue of mothers. The total number of nuptial confinements in 1917 was 122,131, viz., 120,693 single births, 1421 cases of twins, 16 cases of triplets, and 1 case of quadruplets. From this number 185 mothers must be deducted, in whose case the necessary particulars either as to date of marriage or as to previous issue were not stated. The tables refer, therefore, to a total of 121,946 mothers. They exclude children by former marriages and still-born children, but include ex-nuptial children, previous issue by the same father. The tables cannot be given *in extenso*, but the following are their most salient features. The complete tabulations are shown in "Commonwealth Bulletin of Population and Vital Statistics, No. 35; Commonwealth Demography, 1917, and previous years."

**DURATION OF MARRIAGE AND ISSUE OF MOTHERS OF ALL AGES,  
COMMONWEALTH, 1917.**

Duration of Marriage.	Total Mothers.	Total Issue.	Average Number of Children.	Duration of Marriage.	Total Mothers.	Total Issue.	Average Number of Children.
Years.				Years.			
0-1 ...	16,196	16,392	1.01	18-19 ...	1,406	10,656	7.58

Total Mothers	3,500	26,097	37,808	29,149	18,380	6,433	579	121,946

The tables shew a fairly regular increase in the number of children up to the period where the marriage has lasted twenty years, and it appears that the average interval between successive confinements up to that period was rather more than two years and eight months. The average number of children of all marriages was 3.29, the corresponding figures for 1916 having been 3.18; for 1915, 3.26; for 1914, 3.22; for 1913, 3.21; for 1912, 3.29; for 1911, 3.34; and for 1910, 3.41.

A similar table has been prepared shewing the previous issue of mothers of twins, triplets and quadruplets, from which it appears that 258 mothers had twins at their first confinement; 245 at their second; 258 at their third; 199 at their fourth; 148 at their fifth; 110 at their sixth; 66 at their seventh; 54 at their eighth; 38 at their ninth; 30 at their tenth; 14 at their eleventh; 7 at their twelfth; 7 at their thirteenth; 1 at her fourteenth.

Of the sixteen cases of triplets, 3 occurred at the first confinement; 3 at the second; 2 at the third; 2 at the fourth; 1 at the fifth; 2 at the seventh; 1 at the eighth; and 2 at the ninth. The case of quadruplets occurred at the sixth confinement.

12. **Interval between Marriage and First Birth.**—The following table shews the interval between marriage and first birth. Twins and triplets are included, the eldest born only being enumerated :—

**INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, COMMONWEALTH, 1917.**

Interval.	Number of First Children.	Interval.	Number of First Children.	Interval.	Number of First Children.	Interval.	Number of First Children.
Under 1 mth.	322	12 mths.	1,547	2 years	2,638	14 years	17
1 mth.	375	13 "	1,145	3 "	1,168	15 "	14
2 mths	556	14 "	997	4 "	677	16 "	5
3 "	749	15 "	902	5 "	372	17 "	5
4 "	918	16 "	811	6 "	232	18 "	3
5 "	1,210	17 "	725	7 "	141	19 "	2
6 "	1,565	18 "	639	8 "	99	20 "	4
7 "	1,460	19 "	520	9 "	79	21 "	1
8 "	1,409	20 "	481	10 "	62	24 "	1
9 "	3,142	21 "	467	11 "	36		
10 "	2,527	22 "	380	12 "	21	Total	30,666
11 "	1,921	23 "	298	13 "	23		

Of these 30,666 children, 15,751 were males and 14,915 were females; the masculinity of first births was therefore 105.61 as compared with 106.02 for total births.

The previous issue of mothers of ex-nuptial children is not recorded, but for the purposes of the following table all ex-nuptial births have been assumed to be first births. The table shews the ages of mothers of ex-nuptial births, of nuptial births occurring less than nine months after marriage, and of nuptial births occurring nine months or more after marriage. A comparison of the combined total of the first two columns with the total of nuptial children born nine months or more after marriage, reveals the fact that for all ages the ratio of the two was as 4 is to 5. At all ages up to and including 21, however, there was a great preponderance of ex-nuptial births and of births following on ante-nuptial conception. It must, of course, be understood that a certain number of premature births are necessarily included among the births which occurred less than nine months after marriage, but there is no means of arriving at the proportion of those births.

**AGES OF MOTHERS AND INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, etc.**

**COMMONWEALTH, 1917.**

Age of Mother at Birth of Child.	Ex-nuptial Births.	Nuptial Births less than nine months after Marriage.	Total of two preceding columns.	Nuptial Births nine months after Marriage and later.	Total Nuptial First Births.	Nuptial First Births and Ex-nuptial Births.

Total ...	6,321	8,564	14,885	22,102	30,666	36,987

These results have sometimes been wrongly interpreted. In order to make their true significance clearer, it may be pointed out that during the seven years 1908 to 1914 inclusive there were, in an average female population between the ages 12 to 54 inclusive of about 1,377,108, an annual average of 114,832 nuptial and 6935 ex-nuptial confinements. Of the former, about 31,431 were first births, of which 10,952 occurred within 9 months of marriage (and 19,105 within 12 months), leaving 90,336 which were either not first confinements, or were ex-nuptial confinements. The female population between 12 and 54 inclusive was characterised as follows :—

“Never married” 690,845

“Married” 639,570

“Widowed” ... 44,764

“Divorced” 1,929

Thus the female population between the age limits mentioned, not living in the state of marriage, were 737,538 or 53.56 per cent., the married being 46.44 per cent. In the course of the period mentioned, the proportion of married women giving birth during the interval of 0 to 9 months from marriage was 0.34843 of the total nuptial first confinements, or 0.09537 of the total nuptial confinements. During the same period 269,452 marriages were consummated, the brides aged 12 to 54 inclusive being 267,852 in number. Thus the relative numbers can be set out as follow, the basis being 1,000,000 females of the ages of 12 to 54 inclusive.

## CHARACTERISTICS OF FERTILITY IN AUSTRALIA, 1908-1914.

1,000,000 Females ages 12 to 54 inclusive.					Confinements, average for 1 Year.						Marriages, ages 12-54 inclusive.	
Married.	Never Married.	Widowed	Divorced	Total.	First Confinements.			All Confinements.			Marriages.	First Confinements.
					After 9 Months.	Within 9 Months.	Total.	Nuptial.	Ex-Nuptial.	Total.		
464,430	501,663	32,506	1,401	1,000,000	14,871	7,953	22,824	83,387	5,035	88,422	194,503	159,769
464,430	535,570			1,000,000	(6,516)	(3,484)	(10,000)	(94,306)	(5,694)	(100,000)	(100,000)	(82,142)
100,000	1,000,000							17,955	9,401			

If the total ex-nuptial cases in the 7 years (48,546) be added to the total nuptial cases born within 9 months of marriage (76,662), the grand total is 125,208, which is equivalent for 7 years to 90,921 for the 1,000,000 females of ages 12 to 54 inclusive. The ratio of the sum of the ex-nuptial children and those born within 9 months of marriage in one year to the total unmarried (i.e., never married, widowed, and divorced), is consequently 0.02425, or about one-fortieth, while the ratio of the births within 9 months of marriage to the total unmarried females is 0.01485, or about one-seventieth. The matter may be put another way. In a female population of 1,000,000 of ages 12 to 54, there are on the average per diem 62.48 first births; the ex-nuptial births are 13.79 per diem; and the nuptial births, occurring within 9 months of marriage, are 21.77 per diem, the total births being 242.06 per diem, of which 228.27 are nuptial.

13. **Interval between Birth and Registration of Birth.**—Information was obtained during 1917 as to the period elapsing between birth and registration. It has already been mentioned in par. 3 *ante* that one of the effects of the law relating to maternity allowances has been to accelerate the registration of births, as the certificate of registration must be produced when a claim under the Act is lodged. In 1912, during the last quarter of which year the Act was in force, about 6 per cent. of all births were registered within seven days; in 1913 this percentage had risen to 34; in 1914 to 40; and in 1917 to 43.

The weighted average interval between the dates of birth and registration has been found to be as follows :—

INTERVAL BETWEEN BIRTH AND REGISTRATION, COMMONWEALTH, 1911 to 1917.

Year.	For Nuptial Children.	For Ex-nuptial Children.
1911 ... ..	37.4 days	26.7 days
1912 ... ..	*	*
1913 ... ..	15.6 "	15.2 "
1914 ... ..	13.4 "	14.3 "
1915 ... ..	12.3 "	12.4 "
1916 ... ..	12.6 "	14.9 "
1917 ... ..	13.0 "	12.1 "

\* Introduction of maternity allowance.

Similar information for years prior to 1911 is not available, but it may be assumed that the averages did not vary much from year to year. The figures for 1912 have been omitted; they would shew an average similar to that for 1911 for the first three quarters of the year, and one similar to that for 1913 for the last quarter.

## § 2. Marriages.

1. **Marriages, 1907 to 1917.**—The number of marriages registered in the Commonwealth in 1915 was 45,224, the highest number ever recorded. There was a steady increase in the annual number of marriages in each State from 1905 to 1915, and the crude marriage-rate increased similarly in all the States until 1907, with the exception of Western Australia. In 1908 all the States, with the exception of New South Wales and Tasmania, had a lower marriage rate than in 1907, but the rate recovered in 1909 and the three following years, and was considerably higher in 1912 than in 1907 in all the States. In 1913, although the actual number of marriages was greater in Queensland, South Australia, Western Australia, and Tasmania than it had been in 1912, the marriage rate shewed a decrease in every State with the exception of Tasmania. In 1914 the number of marriages and the marriage rate increased in all the States with the exception of South Australia and Tasmania, and in 1915 there were further increases both in the actual number of marriages and in the marriage rate in all States, with the exception of South Australia and Western Australia. The rate for 1915 was the highest ever experienced in the Commonwealth. A considerable decrease however took place in 1916, and a still further fall in 1917, the actual number of marriages in the latter year being about the same as in 1909. The number of marriages in each State since 1907 is shewn below:—

**TOTAL MARRIAGES, COMMONWEALTH, 1907 to 1917.**

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	North Terr.	Federal Terr.	C'wealth.

1917 ...	7.09	6.76	7.16	7.52	5.25	5.72	6.86	0.80	6.87

(a) Number of marriages (not persons married) per 1000 of mean annual population. (b) Part of New South Wales prior to 1911.

As in some international tabulations the marriage rates are calculated per 1000 of the unmarried population of 15 years and over, the corresponding rates have been worked out for the Commonwealth for the four last Census periods. The figures comprise in each case the Census year with the year immediately preceding and the year immediately following, and are as follows:—Years 1880-82, 48.98; years 1890-92, 45.74; years 1900-02, 42.14; years 1910-12, 50.10. These rates refer, of course, to persons married and not to marriages, as do the rates in the preceding table.

3. **Marriage Rates in Various Countries.**—A comparison of the Australian marriage rate with that of European countries shews that until 1915 it was once or twice surpassed by the rate for Ontario, and equalled by the rate of some of the countries of the East of Europe, and that it was higher than the rate of the countries of Central and Western Europe, and especially than the rate of countries of the North of Europe. Since 1915 it has fallen considerably, as might be expected, but figures for European countries not being available for the last few years, a comparison cannot at present be made.

United Kingdom ...	1916	7.1			

4. **Age at Marriage.**—(a) The age at marriage of bridegrooms and brides will be found in the following table, the previous conjugal condition of the contracting parties being distinguished. It will be seen that no less than 1186 males who were less than twenty-one years of age, were married during 1917. The corresponding number of females was 6388, of whom six were widows. At the other extreme there were thirty-seven men of sixty-five years and upwards, who described themselves as bachelors, and six spinsters of corresponding age.

5. **Previous Conjugal Condition.**—In a previous table the total number of bachelors and spinsters, widowed and divorced persons, who were married during the year 1917, was shewn. In the following table the relative conjugal condition of the contracting parties is given:—

**RELATIVE CONJUGAL CONDITION OF PERSONS MARRIED, COMMONWEALTH, 1917.**

Conjugal Condition.		Total Bridegrooms.	Brides.		
			Spinsters.	Widows.	Divorced.
Bridegrooms	Bachelors ...	31,157	29,746	1,161	250
	Widowers ...	2,218	1,515	634	69
	Divorced ...	291	214	46	31
Total Brides ...		33,666	31,475	1,841	350

6. **Birthplaces of Persons Married.**—Information as to the birthplaces of persons who were married in 1917 was not obtained in the State of Western Australia; the following figures refer, therefore, only to New South Wales, Victoria, Queensland, South Australia, Tasmania, the Northern Territory and Federal Territory. As might be expected, there were more brides than bridegrooms who were natives of the Commonwealth. In "Bulletin No. 35, Commonwealth Demography," the relative birthplaces of bridegrooms and brides will be found tabulated.

7. **Occupations and Ages of Bridegrooms.**—A tabulation has been made of the occupations and ages of all males married in the Commonwealth in the years 1907 to 1917. In "Bulletin No. 35" the 1917 tabulation is shown for orders of occupations: here it is repeated for classes only, with a subdivision of the Industrial class and of the class of Primary Producers. The average ages of the persons

falling under those twelve subdivisions were determined, and it appears that, apart from the Indefinite class, which consists chiefly of persons who have retired from business and who are living on their own means, and where a high average age may naturally be expected, the average age ranges from 28.70 in the Manufacturing class to 32.63 years in the Pastoral class. The averages for the two five-year periods 1907-1911 and 1912-1916 have been added for the purposes of comparison. The results obtained are shewn in the following table:—

### OCCUPATIONS AND AGES OF BRIDEGROOMS, COMMONWEALTH, 1917.

Ages at Marriage.	Professional.	Domestic.	Mercantile.	Transport and Communication.	Industrial.			Primary Producers.				Indefinite.
					Manu- facturing.	Building and Construction.	Indefinite Industrial Workers.	Agricultural.	Pastoral.	Mines and Quarries.	Other Primary Producers.

" " (1907-1911)	31.12	30.32	29.73	28.65	28.27	29.11	28.83	30.99	32.50	29.14	29.43	41.60

The average age at marriage of brides has slowly risen from 25.56 years in 1907 to 25.78 years in 1913 and 1914, 25.75 years in 1915, 26.07 years in 1916, and 26.22 years in 1917. The figures for the eleven years are:—1907, 25.56 years; 1908, 25.67 years; 1909, 25.74 years; 1910, 25.77 years; 1911, 25.74 years; 1912, 25.74 years; 1913, 25.78 years; 1914, 25.78 years; 1915, 25.75 years; 1916, 26.07 years; and 1917, 26.22 years. For the five years 1907-11 the average age was 25.70 years, compared with an average of 25.82 years for the five years 1912-16, and 26.22 years for 1917. As the average age of all bridegrooms during 1917 was 29.97 years, it follows that brides are on an average about three years and three-quarters younger than bridegrooms.

**8. Fertility of Marriages.**—The quotient obtained by division of the nuptial births registered, say during the five years 1913 to 1917, by the number of marriages registered during the five years 1908 to 1912, i.e., the period antecedent by five years to the period of the births, has been called the "fertility of marriages." This works out at 3.44, or in other words, the number of children to be expected from every marriage in the Commonwealth is under four. This method, while not professing any claim to accuracy, generally furnishes results which agree fairly well with those found by more elaborate and careful investigation, but in this instance, owing chiefly to the fictitious increase in the number of births shewn in 1912, it is rather higher than for a number of years prior to 1912. For the period 1907-11 the result was 3.43; for the year 1912, 3.87; for the year 1913, 3.94; for the year 1914, 3.87; for the year 1915, 3.50; for the year 1916, 3.17; and for the year 1917, 2.93.

**9. Registration of Marriages.**—In all the States of the Commonwealth marriages may be celebrated either by ministers of religion whose names are registered for that purpose with the Registrar-General, or by certain civil officers—in most cases district registrars. The percentage of marriages celebrated by ministers of religion has fluctuated during the last eleven years between 95.83 per cent. in 1917 and 97.55 per cent. in 1909. The figures for the individual States in 1917 were: New South Wales, 96.45 per cent.; Victoria, 96.52 per cent.; Queensland, 96.56 per cent.; South Australia, 96.46 per cent.; Western Australia, 79.66 per cent.; and Tasmania, 98.12 per cent., the percentage for the Commonwealth being 95.83. The registered ministers in 1917 belonged to more than forty different denominations, some of which, however, can hardly be regarded as having any valid existence. A number of these have been omitted from the tabulation, and are bracketed under the heading "Other Christians." The figures for 1917 are shewn in the following table:—

**MARRIAGES IN EACH DENOMINATION, COMMONWEALTH, 1917.**

Denomination.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N. Ter.	Fed. Ter.	Com'-wealth

**10. Mark Signatures.**—The marriage registers afford some clue, even if an imperfect one, to the illiteracy of the adult population, since a small and constantly diminishing percentage of bridegrooms and brides sign the registers with marks.

(i.) *Males and Females, 1907 to 1917.* For a number of years, with the exception of 1908, 1910, 1912, and 1913, mark signatures by males have been slightly more numerous than those by females, the percentages for the Commonwealth during the past eleven years having been as follows:—

**PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1907 to 1917.**

Year. ...	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Male...	0.81	0.71	0.65	0.56	0.56	0.43	0.36	0.41	0.27	0.37	0.37
Female	0.70	0.73	0.62	0.59	0.54	0.45	0.38	0.38	0.27	0.32	0.31

(ii.) *Mark Signatures in Commonwealth States, 1907 to 1917.* The following table shews that while the Tasmanian percentage has been the highest, and the Victorian the lowest, in each of the eleven years under review, there has been a marked decrease in every State:—

## PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	North. Terr.	Fed. Terr.	C'wealth.
1907 ...	0.87	0.36	1.14	0.55	0.64	2.02	...	...	0.76
1908 ...	0.79	0.33	1.20	0.56	0.82	1.57	...	...	0.72
1909 ...	0.60	0.22	1.16	0.55	0.68	2.07	30.00	...	0.64
1910 ...	0.61	0.29	0.92	0.44	0.52	1.17	29.41	...	0.58
1911 ...	0.54	0.22	0.84	0.46	0.78	1.96	15.00	(a)...	0.55
1912 ...	0.33	0.27	0.60	0.54	0.61	1.29	25.00	...	0.44
1913 ...	0.33	0.17	0.45	0.34	0.78	1.20	8.33	...	0.37
1914 ...	0.36	0.19	0.59	0.45	0.53	1.00	1.47	...	0.39
1915 ...	0.25	0.11	0.26	0.32	0.43	1.47	...	...	0.27
1916 ...	0.41	0.18	0.32	0.35	0.32	0.98	10.53	...	0.35
1917 ...	0.41	0.16	0.32	0.25	0.49	1.14	7.35	...	0.34

(a) Part of New South Wales prior to 1911.

A complete disappearance of mark signatures is hardly to be expected, for the available information tends to shew that two-thirds of those who sign with marks are natives of their respective States, who apparently have not made use of the advantages offered to them by the State schools.

## § 3. Deaths.

1. Male and Female Deaths, 1907 to 1917.—The total number of deaths registered in the Commonwealth from 1907 to 1917 inclusive, gives an annual average of 28,281 males and 20,815 females, the details being as follow:—

## MALE DEATHS, COMMONWEALTH, 1907 to 1917.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Fed. Terr.	C'wealth.

1917 ...	7,496	6,603	2,528	1,967	967	842	11	6	20,420
Rate, (b) 1917	7.93	8.96	7.63	8.49	6.45	8.46	11.36	5.39	8.18

(a) Part of New South Wales prior to 1911. (b) Number of deaths per 1000 of mean population.

**ART 2. Male and Female Death Rates, 1917.**—The crude male and female death rates for 1917 only are given in the last line of the preceding tables. South Australia has the highest rate for males, and Victoria for females, while Tasmania has the lowest male, and Western Australia the lowest female death rate. The rates for the two Territories are based on very small numbers, and comparisons with the States are misleading.

Owing to differences in the age constitution of the six States, the crude rates are not, however, strictly comparable, but for the purpose of calculating the "Index of Mortality" (see page 201) a distribution into five age-groups has been made, and the death rates are shewn for males and females in each State in five-year age groups for the three years 1910-1912, that is, for the census year and for the year immediately preceding and following, on page 196.

**3. Death Rates of Various Countries.**—A comparison with foreign States is, for the same reason, apt to shew the Commonwealth in too favourable a light, but even if an allowance for the different age constitution were made, it would still be found occupying a very enviable position. The following table gives particulars of the death rates of various countries for the latest available years:—

**DEATH RATES (a) OF VARIOUS COUNTRIES.**

Country.	Year.	Crude Death Rate.	Country.	Year.	Crude Death Rate.
Tasmania ...	1917	8.9	Prussia ...	1913	14.9
Western Australia ...	1917	9.0	German Empire ...	1913	15.0
New South Wales ...	1917	9.6	Finland ...	1914	15.6
Queensland ...	1917	9.6	Ireland ...	1916	16.5
New Zealand ...	1917	9.6	France ...	1913	17.7
Commonwealth ...	1917	9.8	Italy ...	1914	17.9
South Australia ...	1917	10.1	Japan ...	1913	19.5
Victoria ...	1917	10.4	Austria ...	1912	20.5
Ontario (Canada) ...	1915	12.0	Serbia ...	1912	21.1
Netherlands ...	1915	12.4	Bulgaria ...	1911	21.5
Denmark ...	1915	12.8	Jamaica ...	1915	21.6
Norway ...	1915	13.3	Spain ...	1914	22.1

United Kingdom ...	1916	14.6	Chile ...	1914	27.8
Sweden ...	1915	14.6	Russia, European ...	1909	28.9
Belgium ...	1912	14.8			

(a) Number of deaths per 1000 of mean population.

**4. Total Deaths, 1907 to 1917.**—The total number of deaths in each of the Commonwealth States during the eleven years 1907 to 1917, is shewn below:—

**TOTAL DEATHS, COMMONWEALTH, 1907 to 1917.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aus.	Tas.	North Terr.	Federal Terr.	C'wealth.
1907 ...	16,411	14,539	5,598	3,736	2,931	1,998	92	...	45,805
1908 ...	16,055	15,766	5,680	3,834	2,879	2,129	83	...	46,426
1909 ...	15,810	14,436	5,530	3,782	2,704	1,842	68	...	44,172
1910 ...	16,158	14,732	5,744	4,014	2,740	2,120	82	...	45,590
1911 ...	17,146	15,216	6,544	4,038	2,923	1,927	65	(a) 10	47,869
1912 ...	18,862	16,589	6,921	4,386	3,335	2,057	67	10	52,177
1913 ...	19,699	15,474	6,783	4,693	2,934	2,131	64	11	51,789
1914 ...	18,720	16,503	6,731	4,713	3,043	1,918	81	11	51,720
1915 ...	19,585	15,823	7,559	4,694	2,992	2,015	97	17	52,782
1916 ...	19,846	16,489	7,514	5,077	3,085	2,056	122	8	54,197
1917 ...	17,941	14,555	6,555	4,365	2,769	1,768	63	13	48,029

(a) Part of New South Wales prior to 1911.

5. **Crude Death Rates, 1907 to 1917.**—The death rate for 1917 shewed a decrease from that for 1916 in every State of the Commonwealth, and was the lowest on record in every State and the Commonwealth as a whole, with the exception of South Australia, where the rate had been lower in the three years 1909 to 1911.

**CRUDE DEATH RATE (a), COMMONWEALTH, 1907 to 1917.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	North Terr.	Federal Terr.	C'wealth.
1907 ...	10.63	11.86	10.31	10.16	11.47	10.81	24.07	...	10.99
1908 ...	10.20	12.71	10.26	10.14	11.17	11.36	22.71	...	11.07
1909 ...	9.89	11.45	9.70	9.74	10.27	9.68	19.22	...	10.33
1910 ...	9.89	11.49	9.71	10.09	10.11	11.10	24.10	...	10.43
1911 ...	10.32	11.52	10.65	9.82	10.19	10.13	19.58	(b) 5.62	10.66
1912 ...	10.86	12.23	10.96	10.28	11.06	10.73	19.95	4.91	11.23
1913 ...	10.89	11.11	10.39	10.82	9.34	10.87	17.49	4.49	10.78
1914 ...	10.11	11.59	9.97	10.71	9.41	9.67	21.59	4.16	10.51
1915 ...	10.48	11.09	11.00	10.68	9.28	10.11	22.03	6.89	10.66
1916 ...	10.63	11.70	11.09	11.73	9.80	10.38	25.16	3.06	11.04
1917 ...	9.60	10.36	9.64	10.10	8.97	8.89	12.71	5.21	9.80

(a) Number of deaths per thousand of mean population for year. (b) Part of New South Wales prior to 1911.

6. **Male and Female Death Rates, 1907 to 1917.**—The rise in the Commonwealth rate in 1908 was practically limited to the male death rate, as the subjoined table shews. The decrease from 1908 to 1909 was fairly equal for the male and female rates, and the increase in 1910 was due to a rise in the female rate. From 1910 to 1911, and again from 1911 to 1912, the increase in the male rate was about one and a-half times as marked as that in the female rate, while the decrease from 1912 to 1913 was more than twice as great for the male rate as for the female rate. The decrease from 1913 to 1914 was fairly equal for the male and female rates, while in 1915 and 1916 there were increases in the male rate, with a further slight decrease in the female rate in 1915, followed by an increase in 1916. In 1917 there were equally pronounced falls both in the male and female rates, which were both the lowest for any year for which records are available.

**MALE AND FEMALE DEATH RATES, (a), COMMONWEALTH, 1907 to 1917.**

Year.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.
Male rate	12.11	12.24	11.51	11.54	11.82	12.51	11.93	11.67	12.08	12.65	11.47
F'male „	9.77	9.81	9.06	9.24	9.40	9.84	9.53	9.27	9.16	9.44	8.18
Crude total rate	10.99	11.07	10.33	10.43	10.66	11.23	10.78	10.51	10.66	11.04	9.80

(a) Number of deaths per thousand of mean population.

7. **Infantile Death Rate.**—(i.) *Deaths and Death Rates of Male and Female Infants, 1907 to 1917.* Improvement continues to take place in the infantile death rate since 1907, in which year it stood at 81.06 per thousand births registered, while in 1917 it had fallen to 55.91 per thousand, a rate lower than that experienced in any previous year, the lowest rate previously experienced being that of the year 1915, when it stood at 67.52 per thousand. In the following table, which shews both the total number of deaths of children under one year and the rate per thousand births since 1907, males and females are distinguished. The universal experience that during the first few years of life the excess of male births tends to disappear, as a consequence of the higher death rate of male infants, is shewn by the fact that out of 706,295 male infants born from 1907 to 1917, 55,188 died during their first year of life, while of 671,769 female infants the number who died was only 42,528:—

**NUMBER OF INFANTILE DEATHS AND RATES OF INFANTILE MORTALITY,  
COMMONWEALTH, 1907 to 1917.**

Year.	Registered Deaths under one year.			Rate of Infantile Mortality (a).		
	Males.	Females.	Total.	Males.	Females.	Total.
1907 ...	4,993	3,952	8,945	88.39	73.38	81.06
1908 ...	4,885	3,791	8,676	85.53	69.65	77.78

1915 ...	67.67	68.78	64.33	67.04	66.54	72.37	65.57	42.55	67.52
1916 ...	67.15	74.63	70.27	73.21	66.22	74.97	40.54	15.87	70.33
1917 ...	56.93	56.82	53.87	53.06	57.09	52.27	43.48	45.45	55.91

(a) Number of deaths under 1 year per 1000 births registered. (b) Part of New South Wales prior to 1911.

The movement has been a fairly regular one, shewing slight increases in the rates during 1910, 1913, and 1916. The minimum rates in the six States, prior to 1917, occurred at different periods, viz., Tasmania, in 1909; Queensland, in 1910; Victoria and South Australia, in 1911; New South Wales, in 1916, and Western Australia, in 1915. The regrettable increase in the Victorian rate for 1908 over that of 1907 was wholly due to the large mortality caused by the phenomenal heat of January, 1908. With the exception of Queensland, where the 1908 rate was exceptionally low, the 1909 rate was the lowest ever experienced up to that date in any of the States. A rise occurred in every State in 1910 with the exception of Queensland, which was counterbalanced by a considerable decrease during 1911 in every State but Queensland. In 1912 the rates shewed a rise in every State except Tasmania, and this was followed by a decrease in 1913 in Victoria, Queensland, and Western Australia, and by a further rise in New South Wales, South Australia, and Tasmania. In 1914 the rates increased in every State except New South Wales and Western Australia, the increases in Victoria and South Australia being particularly noticeable. In 1915 the rate decreased in New South Wales, Victoria, South Australia, and Western Australia, and increased slightly in Queensland and Tasmania, while in 1916 it increased in every State with the exception of New South Wales and Western Australia. A considerable decrease is shown by every State during 1917, and the rates for that year are the lowest on record in every State and in the Commonwealth as a whole.

The total number of births, and of deaths of children under one year of age, and the average rate of infantile mortality for the eleven years 1907 to 1917 are shewn in the following table for each of the fifty-nine districts for which the vital statistics of the Commonwealth have been tabulated during that period. To afford a better idea of the geographical position of the districts, the name of a town situated in a fairly central part of each district has been added. The figures for the Federal Territory and for Lord Howe Island are included for the sake of completeness, but are too small to be used in comparison with others.

### INFANTILE MORTALITY FOR THE ELEVEN YEARS 1907 to 1917.

States and Territories.	Districts.	Towns.	Total Births, 1907-17.	Total Deaths of Children under one year, 1907-17.	Average Infantile Mortality per 1000 Births, 1907-17.

(iii.) *Infantile Mortality in Various Countries and Cities.* Compared with European countries, the cities and States of the Commonwealth occupy a very enviable position, and it may be pointed out that experience has shewn that a high birth rate is often, though not invariably, accompanied by a high infantile death rate. The figures in the subjoined tables relate to the latest years for which returns are available:—

#### RATE (a) OF INFANTILE MORTALITY IN VARIOUS COUNTRIES.

Country.	Year.	Rate of Infantile Mortality. (a)	Crude Birth Rate. (b)	Country.	Year.	Rate of Infantile Mortality. (a)	Crude Birth Rate. (b)
New Zealand ...	1915	50	25.4	Ontario (Canada)...	1915	102	24.2

(a) Number of deaths under 1 year per 1000 births registered.

(iv.) *The Effect of Infantile Mortality on Birth Rate.* It has been contended by certain investigators that the birth-rate question is intimately related to that of infantile mortality, and that in many cases a declining birth rate may be to a large extent accounted for by a decline in the infantile death rate, since, in the case in which an infant has survived, the period elapsing before the birth of the next child is likely to be longer than in the case in which the infant has died. It may indeed be readily admitted that in any community the birth rate may be affected in a definite way by variations of infantile mortality, but careful investigation of the question serves to shew that, whether considered from the theoretical aspect with a view to determining the *maximum* and the *probable* effects which a given change in the rate of infantile mortality would produce in the birth rate, or from the practical point of view by observing the fluctuations in the birth rates of various countries which have been collateral with changes in their rates of infantile mortality, there is little ground for the contention that the rate of infantile mortality is an important factor in determining the variations in the birth rate. One calculation which has been made on the basis of normal Australian conditions indicates that the *maximum* effect of increasing the rate of infantile mortality 100 per cent. would, in the absence of other disturbing causes, be to increase the birth rate by only  $3\frac{1}{4}$  per cent., whilst the *probable* effect would be considerably less than this. In other words, the *maximum* effect of an increase in the rate of infantile mortality from 100 to 200 per 1000 births would be to increase the birth rate from say 30 to 31 per 1000 of population. It may be noted too, that although in some countries an increase in birth-rate accompanies an increase in the rate of infantile mortality, in others the birth rate would appear to be quite unaffected by such an increase, while in the case of England and Wales, Scotland, and Ireland, the tendency apparently exhibited is for an increase in the rate of infantile mortality to be associated with a decrease in the birth rate. The conclusion which these results appear to warrant is that although infantile mortality undoubtedly tends on the whole to increase the birth rate, the practical effect produced is so slight that the existence of such a relation may in any instance be quite masked by more important causes of variation.

8. **Deaths in Age-Groups, 1907 to 1917.**—A distribution into age-groups has been made of the 540,056 deaths which occurred in the Commonwealth from 1907 to 1917, and the results are tabulated for each State. It is, however, sufficient here to shew the results for the Commonwealth as a whole, which are as follows:—

**DEATHS IN AGE-GROUPS, COMMONWEALTH, 1907 to 1917.**

Ages.	Males.	Females.	Total.	Percentage of Total Males.	Percentage of Total Females.	Percentage of Total.
Under 1 year ...	55,188	42,528	97,716	17.74	18.57	18.09
1 year and under 5 ...	17,586	15,495	33,081	5.65	6.77	6.13
5 years and under 20 ...	16,492	14,305	30,797	5.30	6.25	5.70
20 years and under 40 ...	39,732	35,512	75,244	12.77	15.51	13.93

65 years and over ...	95,092	70,677	165,769	30.57	30.87	30.70
Age not stated ...	651	125	776	0.21	0.05	0.14
Total ...	311,090	228,966	540,056	100.00	100.00	100.00

9. **Deaths at Single Ages and in Age-Groups, 1917.**—The 48,029 deaths which were registered in the Commonwealth in the year 1917 will be found tabulated under single years, and in groups of five years for each State and Territory, in "Bulletin No.

34, Commonwealth Demography, 1917." It has been thought advisable to tabulate the deaths during the first two years of life in greater detail. The first month has, therefore, been shewn in weeks, and the twenty-three months up to the end of the second year in months. This tabulation shews a great number of children dying during the first week, the number gradually diminishing towards the end of the second year. The particulars relating to the Commonwealth are given in the following table:—

## DEATHS AT SINGLE AGES AND IN AGE-GROUPS, 1917.

## COMMONWEALTH.

90 and over	337.70	363.94	308.54	307.81	333.33	404.98	345.44

The tables shew a high death rate for children under five years of age, which rapidly diminishes until, at ages 10 to 14, a rate of 1.66 per 1000 is shewn, which is the lowest at any age. The rate then gradually rises with increasing age until, at the ages 90 and over, more than one-third die every year.

10. **Deaths of Centenarians, 1917.**—Particulars as to the twenty-two persons who died in 1917, aged 100 years and upwards, are given in the following table. It must, of course, be understood that while the Registrars-General of the various States take the greatest care to have statements as to abnormally high ages verified as far as possible, no absolute reliance can be placed on the accuracy of the ages shewn, owing to the well-known tendency of very old people to overstate their ages. No attempt has been made by the Commonwealth Bureau of Census and Statistics to verify the truth of the statements made. The fact must not be lost sight of in connection with this question, that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically only from 1874, the Act passed in 1836 having left many loop-holes open for those unwilling to register the births of their children:—

#### DEATHS OF CENTENARIANS, 1917.—COMMONWEALTH.

14. **Index of Mortality.**—The death rates, those for age-groups on page 196 excepted, so far shewn are crude rates, *i.e.*, they simply shew the number of deaths per thousand of mean population, without taking the age constitution of that population into consideration. It is, however, a well-known fact that the death rate and age constitution of a people are intimately related; thus, other conditions being equal, the death rate of a country will be lower if it contain a large percentage of young people (not infants). In order to have a comparison of the mortality of various countries on a uniform basis, so far as age constitution is concerned, the International Statistical Institute in its 1895 session recommended the universal adoption of the population of Sweden in five age-groups, as ascertained at the Census of 1890, as the standard population by which this "Index of Mortality," as distinguished from the crude death rate, should be ascertained. The calculation for 1917 is shewn below for each of the States and Territories and for the Commonwealth, the distribution of the mean population of 1917 into age-groups being in accordance with the distribution as found at the Census of 1911:—

## INDEX OF MORTALITY, 1917.—(STATES AND COMMONWEALTH).

Age-Group.	Mean Population, 1917, distributed according to Results of Census of 1911.	Number of Deaths, 1917.	No. of Deaths per 1000 of Mean Population, 1917, in each Age-Group.	Age Distribution per 1000 of Standard Population.	Index of Mortality.

NOTE.—The small number of persons whose ages were not ascertained at the 1911 Census have been proportionately distributed among the various age-groups, and the same plan has been followed in regard to the 56 persons who died in 1917, and whose ages were not stated in the certificates of death.

It will be seen that among the States in 1917, Western Australia had the highest index and the second lowest crude rate, while Tasmania had the lowest index and crude rate. Victoria experienced the highest crude death rate and the second highest index. The range of the indexes was below that of the crude rates, the latter varying from 8.89 per thousand in Tasmania to 10.36 per thousand in Victoria, a range of 1.47 per thousand, while the index varied from 11.78 per thousand in Tasmania to 12.93 per thousand in Western Australia, a range of 1.15 per thousand.

For purposes of comparison with previous years the index of mortality is shewn in the following table for each of the eleven years 1907-1917 :—

## INDEX OF MORTALITY 1907-1917 (STATES AND TERRITORIES).

Year.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Northern Territory.	Federal Territory.	Com'-wealth.
1907 ... ..	13.66	14.55	13.52	13.12	14.94	14.10	...	...	13.97
1908 ... ..	13.13	15.58	13.37	12.89	14.81	14.46	...	...	14.10

1910 ... ..	12.48	14.15	12.60	12.50	13.48	13.62	...	...	13.17
1911 ... ..	13.23	14.23	13.57	12.18	13.47	12.97	(a) 17.91	(b) 6.53	13.55
1912 ... ..	13.63	14.94	13.91	12.76	14.55	13.69	17.23	6.36	14.08
1913 ... ..	13.61	13.50	13.25	13.25	12.58	13.54	20.17	6.13	13.47
1914 ... ..	12.72	14.11	12.70	13.03	12.56	12.11	20.35	5.17	13.18
1915 ... ..	13.24	13.54	14.30	13.09	12.79	13.04	21.62	7.15	13.47
1916 ... ..	13.48	14.28	14.37	14.45	14.15	13.43	22.63	4.05	13.99
1917 ... ..	12.45	12.81	12.64	12.65	12.93	11.78	13.42	6.70	12.63

(a) Included in South Australia prior to 1911. (b) Part of New South Wales prior to 1911.

A comparison of the above figures with the crude death rates given on a previous page shews that while the crude rate was highest in Victoria every year, the index was highest in Victoria seven times, and in New South Wales, Queensland, South Australia, and Western Australia once each in the same period. South Australia had the lowest index five times, Western Australia three times, Tasmania twice, and New South Wales once, while the crude rate was lowest five times in South Australia, four times in Western Australia, and twice in Tasmania. The high index in Victoria is due to the large proportion of persons over 60 years of age, and in Western Australia to the heavy mortality in the early period of life.

15. **Monthly Variations in Death Rates.**—(i.) *General Death Rates.* The annual death rates, corresponding to the number of deaths registered in each equalised month, have been calculated for the six years 1907-1912, and a series of diagrams shewing the results for each State and the Commonwealth as a whole appears on page 222 of this issue, distinguishing the rates for males, females, and persons. The curves shewing the male and female rate exhibit in each State a fairly parallel course,

irregularities being, however, more strongly marked in the case of the male curve. The minimum rates in New South Wales and Queensland fall within the autumn months, from March to May, while in Victoria, South Australia, Western Australia, and Tasmania they fall in the spring months, October and November. In no case is there, however, a very great difference between the rates in spring and in autumn, the figures for the Commonwealth being 10.19 per thousand in March, and 10.34 per thousand in October. The maximum rates in New South Wales, Victoria, and Tasmania are experienced in August, and in Queensland in September, with the rates for December and January as secondary maxima. In South Australia the maximum rate of 11.33 per thousand falls in January, the rate for August standing next with 10.80 per thousand. In Western Australia the maximum rate is found in May.

(ii.) *Infantile Death Rates.* A similar series of diagrams, shewing the monthly variations in the infantile death rates, appears on page 223. With the exception of Western Australia, where the maximum occurs in May, the maxima are found in the summer months in every State. The rates gradually decrease from January to March, shewing in several States a slight increase in April, with a further diminution until July. In July and August the rates rise to some extent, to fall again until October or November. From that time a rapid rise takes place, until the maximum is reached in December or January. Tasmania, where the seasons are rather later than in the continental States, shews two distinct minima in May and November, with a summer maximum in February, and a fairly high rate in September. In Western Australia the rates are moderately high in December and January, and drop until March, to rise rapidly in April and May when the maximum is reached. From May to September there is a gradual decrease, with a quick rise from the latter month until December.

16. *Causes of Death.*—(i.) Information regarding the changes in the classification of causes of death will be found in previous editions of this Year Book (*e.g.*, Year Book No. 5, pages 222 and 223). The statement will suffice, therefore, that the classification adopted by the Commonwealth Bureau of Census and Statistics is that of the International Institute of Statistics, as amended by the Committee of Revision which met in 1909. The detailed classification groups causes of death under 189 different headings in fourteen categories, as follows:—

- |   |   |
|---|---|
| i. General Diseases.  | viii. Diseases of the Skin and Cellular Tissue. |
| ii. Diseases of the Nervous System and Organs of Special Sense. | ix. Diseases of the Organs of Locomotion.       |
| iii. Diseases of the Circulatory System.                        | x. Malformations.                               |
| iv. Diseases of the Respiratory System.                         | xi. Infancy.                                    |
| v. Diseases of the Digestive System.                            | xii. Old Age.                                   |
| vi. Diseases of the Genito-urinary System and Adnexa.           | xiii. Violence.                                 |
| vii. Puerperal Condition.                                       | xiv. Ill-defined Diseases.                      |

(ii.) *Compilation of Vital Statistics for 1907 and Subsequent Years in Commonwealth Bureau.* The vital statistics of the Commonwealth from the year 1907 onward have been tabulated according to this classification in the Commonwealth Bureau, and the system is being employed in all the State offices in the preparation of their monthly and quarterly bulletins of vital statistics.

(iii.) *Classification of Causes of Death, 1907 to 1917, according to Abridged International Classification.* An abridged classification, which enumerates thirty-eight diseases and groups of diseases according to the revised classification, is in use in many European and American States, while the Commonwealth Statistics have been compiled on the detailed classification of 189 headings. A table has been compiled shewing the causes of death according to the abridged classification, so that the results may be compared with those of countries which use the abridged index.

The compilations for the years 1907 to 1917 will be found in full in "Bulletins Nos. 8, 14, 20, 25, 29, 30, 31, 32, 33, 34, and 35 of Population and Vital Statistics"; here it will suffice to give the abridged classification under thirty-eight headings for the year 1917:—

(d) The classification for the years 1910 to 1916 is shown for the Commonwealth in the following table, and for purposes of comparison the figures for the year 1917 have

been repeated from the preceding table. Male and female deaths for 1905, 1906, and 1907 are shewn separately on page 237 of the second issue, those for 1908 on pages 211 and 212 of the third issue, for 1909 on pages 200 and 201 of the fourth issue, for 1910 on pages 202 and 203 of the fifth issue, for 1911 on pages 224 and 225 of the sixth issue, for 1912 on pages 182 and 183 of the seventh issue, for 1913 on pages 182 and 183 of the eighth issue, for 1914 on pages 188 and 189 of the ninth issue, and for 1915 on pages 198 and 199 of the tenth issue of this Year Book, while the figures for 1917 are given on pages 204 and 205 of this issue.

**17. Certification of Deaths.**—Information was obtained in 1917 as to the persons by whom the 48,029 deaths which occurred in the Commonwealth were certified. The result of the enquiry shews that approximately 89.3 per cent. (in 1910, 88.1 per cent.; in 1911, 88.2 per cent.; in 1912, 88.1 per cent.; in 1913, 88.7 per cent.; in 1914, 88.8 per cent.; in 1915, 89.3 per cent.; and in 1916, 89.5 per cent.) were certified by medical practitioners, and 10.3 per cent. (in 1910, 11.1 per cent.; in 1911, 10.9 per cent.; in 1912, 10.9 per cent.; in 1913, 10.8 per cent.; in 1914, 10.7 per cent.; in 1915, 10.2 per cent., and in 1916, 9.9 per cent.) by coroners after inquests or magisterial enquiries, while in 0.4 per cent. (in 1910, 0.8 per cent.; in 1911, 0.9 per cent.; in 1912, 1.0 per cent.; in 1913, 0.5 per cent.; in 1914, 0.5 per cent.; in 1915, 0.5 per cent., and in 1916, 0.6 per cent.) of the cases there was either no certificate given or particulars were not forthcoming. The results are shewn in detail in Bulletin No. 35; a short summary will therefore suffice here:—

#### CERTIFICATION OF DEATHS, COMMONWEALTH, 1917.

Death Certified by—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Fed. Ter.	C'with.
Medical practitioner	15,928	12,789	6,081	4,011	2,414	1,629	27	8	42,887
Coroner ...	2,007	1,766	350	342	326	131	36	5	4,963
Not certified or not stated ...	6	...	124	12	29	8	...	...	179
Total Deaths ...	17,941	14,555	6,555	4,365	2,769	1,768	63	13	48,029

Of the cases certified by coroners, violent deaths numbered 2443, senile decay 421, organic heart disease 342, ill-defined causes 286, congenital debility 176, cerebral hæmorrhage and apoplexy 115, pneumonia 102, Bright's disease 76, diarrhoea and enteritis 70, pulmonary tuberculosis 70, diseases of arteries, aneurisms, etc. 64, broncho-pneumonia 59, acute and chronic alcoholism 55, puerperal diseases, 51, infantile convulsions 39; a total of 4369 out of 4963.

Of uncertified causes of death, violent deaths numbered 38, congenital debility 32, senile debility 28, ill-defined causes 20, infantile convulsions 8, pulmonary tuberculosis 6; a total of 132 out of 179.

**18. Deaths from Special Causes.**—The table on p. 207 furnishes comparisons for the last eight years only, and comparisons will, therefore, generally be restricted to that period.

(i.) *Typhoid Fever.* Deaths from typhoid fever were more numerous in 1908 than in any succeeding year, numbering 736. A continuous decline continued until 1911, when 488 deaths were recorded. Since 1911 the number of deaths from typhoid has risen and fallen twice. Of the 284 deaths recorded in 1917, 96 occurred in New South Wales, 62 in Victoria, 51 in Queensland, 29 in South Australia, 29 in Western Australia, and 17 in Tasmania.

(ii.) *Typhus.* No deaths from typhus have been registered from 1910 to 1917.

(iii.) *Malaria.* Deaths from malarial diseases are practically confined to the tropical districts of Northern Queensland and Western Australia, and to the Northern Territory, 37 out of 49 deaths registered in 1917 having occurred in Queensland, 4 in Western Australia, and 2 in the Northern Territory.

(iv.) *Small-pox.* The number of deaths from small-pox in Australia is very small, eleven deaths only resulting in the eight years under review. An epidemic occurred in 1913, but caused only one death. There were three deaths in 1914, one in 1915, and one in 1916.

(v.) *Measles.* No serious epidemic of measles has occurred for several years; the deaths in 1910 numbered 124, while 206 were registered in 1911. In 1912 New South Wales experienced a slight epidemic, and was responsible for 352 deaths out of 519 registered. In 1913 the number of deaths fell to 186, and in 1914 to 155. A large increase

in the number of deaths occurred in 1915, but in 1916 the total fell again to 211, and in 1917 to 72.

(vi.) *Scarlet Fever*. 29 deaths were registered in 1914, 104 in 1915, 134 in 1916, and 64 in 1917.

(vii.) *Whooping Cough*. A rather severe epidemic of whooping cough visited New South Wales in the early part of 1907, causing 592 deaths out of a total of 1070 registered in the Commonwealth. The deaths in 1908 fell to 249, with a slight increase to 257 in 1909, and a much greater increase to 476 in 1910. During 1911, however, only 291 deaths, and in 1912, 301 deaths were registered. In 1913 the number of deaths was 560, falling to 185 in 1915, and increasing again to 426 in 1916, with a further fall to 282 in 1917, of which 142 occurred in New South Wales and 67 in Victoria.

(viii.) *Diphtheria and Croup*. Deaths from this cause increased each year from 421 in 1908 to a maximum of 808 in 1913. The numbers declined to 716 in 1914 and 703 in 1915, but increased to 893 in 1916, and fell to 646 in 1917, of which 249 were registered in New South Wales, 156 in Victoria, 82 in Queensland, 89 in South Australia, 32 in Western Australia and 38 in Tasmania.

(ix.) *Influenza*. This disease was rather more prevalent in 1908 than in any succeeding year, the deaths numbering 588; in 1909, 326; in 1910, 324; in 1911, 447; in 1912, 386; in 1913, 341; in 1914, 331; in 1915, 389; in 1916, 278; and in 1917, 168.

(x.) *Asiatic Cholera*. No cases of Asiatic cholera have ever occurred in the Commonwealth.

(xi.) *Cholera Nostras*. Isolated cases only of choleric form diarrhoea occurred in each of the eight years. One death from this cause was registered during 1917.

(xii.) *Other Epidemic Diseases*. The number of deaths registered under this heading was 184 in 1910, 295 in 1911, 224 in 1912, 185 in 1913, 176 in 1914, 205 in 1915, 249 in 1916, and 144 in 1917. The list in 1917 includes the following diseases:—Dysentery 57, erysipelas 54, leprosy 3, other epidemic diseases 30. Of the 89 deaths from leprosy in the years 1908 to 1917, 73 occurred in Queensland. There have been no deaths from plague in the Commonwealth since 1912. In 1908, 14 deaths were registered; in 1909, 13 deaths, and in 1912, 1 death.

(xiii.) *Tuberculosis of the Lungs and Acute Miliary Tuberculosis*. The deaths in 1917 numbered 2883; viz., 1707 males and 1176 females. The figures for the years 1910 to 1916 were 3059, 3164, 3146, 3252, 3111, 3198 and 2883 respectively. Of the deaths in 1917, 1011 occurred in New South Wales, 908 in Victoria, 312 in Queensland, 341 in South Australia, 214 in Western Australia, 93 in Tasmania, and 4 in the Northern Territory.

(xiii.a.) *Tuberculosis of the Respiratory System*. Of the various forms of tuberculosis prevalent in the Commonwealth, that which has probably attracted the most attention and has been the subject of the widest comment is phthisis, or tuberculosis of the lungs. The intimate relation, however, between tuberculosis of the lungs and that of other parts of the respiratory system renders it desirable that all forms of tuberculosis of the respiratory system should be brought under one head for various investigations concerning the age incidence and duration of this disease.

In the matter of the age incidence of death from tuberculosis of the respiratory system, diagrams were given in Year Books 2, 3, and 4, pp. 239, 217, and 206 respectively, shewing the frequency of deaths at successive ages in England and Wales during 1906 (Fig. 1), and in the Commonwealth during 1907 (Fig. 2). These were superseded by a fuller reference based on later results in Year Book No. 5, pp. 230, etc. The results given depended upon intercensal estimates of population, and these having been adjusted to agree with the Census of 3rd April, 1911, some slight amendments of the figures in previous issues were made in Year Book No. 5.

(xiv.) *Tuberculosis of the Meninges*. The number of deaths ascribed to this cause has varied very slightly during the last eight years. The greatest number of deaths, viz., 269, occurred in 1911, and the least number, viz., 206, in 1917.

(xv.) *Other Forms of Tuberculosis.* The deaths in 1917 include the following forms of tuberculosis :—Abdominal tuberculosis, 107; Pott's disease, 44; white swellings, 22; tuberculosis of other organs, 38; and disseminated tuberculosis, 64.

(xva.) *All Forms of Tuberculosis.* A complete tabulation of all the different tubercular diseases from which deaths occurred in 1917 will be found in Bulletin No. 35 of Population and Vital Statistics. Here it will suffice to show a few of the features of the tabulation mentioned. The total number of deaths due to tubercular diseases was 3364, viz., 1983 males and 1381 females. The following table shews the ages of these 3364 persons :—

**AGES OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1917.**  
**COMMONWEALTH.**

A tabulation has been made of the occupations of males dying from tubercular diseases during 1917. A summary is here given :—

**OCCUPATIONS OF MALES WHO DIED FROM TUBERCULAR DISEASES, 1917.**  
**COMMONWEALTH.**

Occupation.	No. of Deaths	Occupation.	No. of Deaths
Professional class ...	154	Agricultural class ...	130
Domestic class ...	78	Pastoral class ...	34
Mercantile class ...	261	Working in mines and quarries ...	201
Engaged in transport and communication ...	165	Other primary producers ...	12
Manufacturing class ...	205	Independent means ...	8
Engaged in building and construction ...	80	Dependents ...	249
Other industrial workers ...	375	Occupation not stated ...	31
		Total male deaths ...	1,983

The length of residence in the Commonwealth of persons who died from tubercular diseases has been tabulated for the year 1917 for all the Commonwealth States, with the following results :—

**LENGTH OF RESIDENCE IN COMMONWEALTH**  
**OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1917.**

Length of Residence in Commonwealth.	Male.	Fem.	Total.	Length of Residence in Commonwealth.	Male.	Fem.	Total.
Born in Commonwealth ...	1,333	1,186	2,519	Resident 10 yrs. & under 15	38	7	45
Resident under 1 year ...	9	2	11	" 15 " " 20	29	9	38
" 1 year ...	8	7	15	" 20 " " over ...	314	94	408

" 3 " " ...	14	6	20				
" 4 " " ...	23	13	36				
" 5 " " & under 10	96	34	130	Total Deaths ...	1,983	1,381	3,364

From the above table and the table on page 197, it will be seen that, among persons who had lived less than 5 years in Australia, 634 deaths occurred, and of these 99, or 15.6 per cent., were due to tubercular diseases.

In order to shew the prevalence of tuberculosis in the several States, the death rates from tubercular diseases are shown in the following table, together with the percentage which deaths from tuberculosis bear on the total number of deaths registered:—

**DEATH RATES (a) FROM TUBERCULOSIS AND PERCENTAGE ON TOTAL DEATHS,  
COMMONWEALTH, 1917.**

State.	Death Rates (a) from Tuberculosis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.

(a) Number of deaths from tuberculosis per 1000 of mean population.

The following table, which gives for a number of countries the death-rates from pulmonary and military tuberculosis per 1000 persons living, shews that the Commonwealth occupies a very enviable position when compared with most European countries.

**PULMONARY AND MILITARY TUBERCULOSIS—DEATHS PER 1000 PERSONS LIVING.**

Country.	Year.	Death Rate.	Country.	Year.	Death Rate.
Rumania ...	1914	0.40	United States (Registration Area) ...	1915	1.28

(xvi.) *Cancer and other Malignant Tumours.* The number of deaths from cancer has increased continuously from 2921 in 1908 to 4022 deaths in 1917. Of the deaths registered in 1917, 2062 were those of males, viz., 772 in New South Wales, 614 in Victoria, 290 in Queensland, 201 in South Australia, 108 in Western Australia, 74 in Tasmania, 2 in the Northern Territory, and 1 in the Federal Territory; while 1960 were those of females, viz., 698 in New South Wales, 692 in Victoria, 210 in Queensland, 180 in South Australia, 96 in Western Australia, and 84 in Tasmania. Bulletin No. 35 contains a complete tabulation of the various types of cancer and of the seat of the disease, of which the following is a summary:—

## DEATHS FROM CANCER, COMMONWEALTH, 1917.

Seat of Disease.	Male.	Female	Total.
Cancer, etc., of the buccal cavity ... ..	271	22	293
" " the stomach and liver ... ..	825	600	1,425
" " the peritoneum, the intestines, and the rectum ... ..	292	279	571
" " the female genital organs ... ..	...	398	398
" " the breast ... ..	...	269	269
" " the skin ... ..	111	58	169
" " other organs ... ..	563	334	897
Total Deaths ... ..	2,062	1,960	4,022

Of these deaths, 965 were described as cancer, 1958 as carcinoma, 222 as epithelioma, 411 as "malignant disease," 92 as "malignant tumour," 20 as neoplasm, 40 as "rodent ulcer," 291 as sarcoma, and 23 as scirrhus.

The ages of the 4022 persons who died from cancer in 1917 are shewn in the following table, from which it will be seen that while the ages below 35 are not by any means immune from the disease, the great majority of deaths occurred at ages from 35 upwards, the maximum being found in the age group 60 to 65 :—

## AGES OF PERSONS WHO DIED FROM CANCER, 1917.

## COMMONWEALTH.

Ages.	Male.	Female	Total.	Ages.	Male.	Female	Total.

50 " " 55	217	212	429	Total Deaths ...	2,062	1,960	4,022

A tabulation, of which the following is a summary, has been made of the occupations of males who died from cancer :—

## OCCUPATIONS OF MALES WHO DIED FROM CANCER, 1917.

## COMMONWEALTH.

Occupation.	No. of Deaths.	Occupation.	No. of Deaths.
Professional class ... ..	110	Pastoral class ... ..	86
Domestic class ... ..	66	Working in mines and quarries ...	100
Mercantile class ... ..	248	Other primary producers ... ..	16
Engaged in transport and communication ... ..	156	Independent means ... ..	42
Manufacturing class ... ..	223	Dependents ... ..	69
Engaged in building and construction ... ..	101	Occupation not stated ... ..	71
Other industrial workers ... ..	404	Total Male Deaths ... ..	2,062
Agricultural class ... ..	370		

As the following tables shew, the total death rates from cancer are below those for tubercular diseases in South Australia and Western Australia only. The male death rates from cancer were, in 1917, in excess of those from tuberculosis in all the States except South Australia and Western Australia, while the female death rates were in excess in all the States with the exception of South Australia. While the death rates from tuberculosis have a general tendency to decrease, the death rates from cancer have, on the contrary, shewn an increase in nearly every recent year. Thus for the whole Commonwealth in 1908 the death rate from tuberculosis was 0.25 per thousand greater than that from cancer. In 1909 this decreased to 0.14; in 1910 to 0.10; in 1911 to 0.09; and in 1912 to 0.03 per thousand, while 1913 shews a slight increase in the excess to 0.04 per thousand. In 1914, while the death rate from tuberculosis decreased from 0.79 to 0.73 per thousand, the rate for cancer remained stationary, the result being that the rate for cancer exceeded that for tuberculosis by 0.02 per thousand. In 1915 the death rate from cancer was 0.03 per thousand; in 1916, 0.06 per thousand; and in 1917, 0.13 per thousand in excess of that of tuberculosis.

**DEATH RATES (a) FROM CANCER AND PERCENTAGE ON TOTAL DEATHS, 1917.**  
COMMONWEALTH.

Austria ...	1912	0.81			

The fifth issue of this Year Book contains, on pages 230, etc., a paper dealing, *inter alia*, with the incidence of cancer in the Commonwealth. The paper is not reprinted in the present issue.

(xvii.) *Simple Meningitis.* Deaths from this cause decreased from 676 deaths in 1908 to 567 in 1910. Since that year the number has increased each year until 1914 when 812 deaths were registered. Sporadic cases of cerebro-spinal meningitis, which occurred to the end of 1914, are included in these figures, but from 1915 onward they were tabulated separately, the deaths during 1917 from cerebro-spinal meningitis being 255, and those from all other forms of meningitis, 435. Of the former, 85 occurred in New South Wales, 76 in Victoria, 54 in Queensland, 18 in South Australia, 13 in Western Australia, and 9 in Tasmania.

(xviii.) *Apoplexy, Hæmorrhage, and Softening of the Brain.* The deaths registered under this heading in 1908, were 1867, viz., 991 males and 876 females; in 1909, 1665, viz., 869 males and 796 females; in 1910, 1704, viz., 864 males and 840 females; in 1911, 2178, viz., 1122 males and 1056 females; in 1912, 2176, viz., 1146 males and 1030 females; in 1913, 2281, viz., 1188 males and 1093 females; in 1914, 2204, viz., 1143 males and 1061 females; in 1915, 2118, viz., 1120 males and 998 females; in 1916, 2230, viz., 1133 males and 1097 females, and in 1917, 2214, viz., 1152 males and 1062 females. The 1917 figures are made up of hæmorrhage of the brain and apoplexy—1117 males, 1007 females, total 2124; and softening of the brain—85 males, 55 females, total 90.

(xix.) *Organic Diseases of the Heart.* The number of deaths registered in 1917 was 3852, viz., 2166 males and 1686 females. Of these deaths, New South Wales was responsible for 807 males and 578 females; Victoria for 619 males and 531 females; Queensland for 299 males and 196 females; South Australia for 211 males and 218 females; Western Australia for 136 males and 80 females; Tasmania for 90 males and 83 females; and the Northern Territory for 4 males. To the figures for 1917 correspond the following death rates and percentages to total deaths:—

**DEATH RATES (a) FROM ORGANIC HEART DISEASE AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1917.**

State.	Death Rates (a) from Organic Heart Disease.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.87	0.61	0.74	7.73	7.71	7.72
Victoria ...	0.93	0.72	0.82	7.78	8.04	7.97
Queensland ...	0.86	0.59	0.73	7.43	7.75	7.55
South Australia ...	1.05	0.94	0.99	8.80	11.09	9.83
Western Australia	0.86	0.53	0.70	7.55	8.27	7.80
Tasmania ...	0.91	0.83	0.87	9.72	9.86	9.78
Northern Territory	1.00	...	0.81	7.69	...	6.35

Commonwealth ...	0.90	0.68	0.79	7.84	8.26	8.02

(a) Number of deaths from Organic Heart Disease per 1000 of mean population.

(xx.) *Acute Bronchitis.* The classification of causes of death requires deaths of persons under five years of age, which are merely ascribed to "bronchitis," to be classified under "acute bronchitis," and similarly certified deaths of older persons under "chronic

bronchitis." This rule has been followed throughout in compiling the tables for 1908-1917, with the result that acute bronchitis is credited with 412 deaths in 1908, 422 deaths in 1909, 420 deaths in 1910, 515 deaths in 1911, 460 deaths in 1912, 397 deaths in 1913, 389 in 1914, 489 in 1915, 512 in 1916, and 321 deaths in 1917, viz., 189 males and 132 females.

(xxi.) *Chronic Bronchitis.* The adjustment mentioned in the preceding paragraph gives a total of 829 deaths in 1917.

(xxii.) *Pneumonia.* The 1917 figures were 1185 males and 711 females, a total of 1896 deaths.

(xxiii.) *Other Diseases of the Respiratory System.* This head was established in 1910, the figures previously being included in "Other Diseases" (paragraph xxxvii.). Deaths in 1908, 1569; in 1909, 1565; in 1910, 1544; in 1911, 1872; in 1912, 1863; in 1913, 1812; in 1914, 1866; in 1915, 2212; in 1916, 2243, and in 1917, 1941. The total for 1917 is made up as follows, viz.:—Diseases of the larynx, 62 deaths; diseases of the thyroid body, 21 deaths; broncho-pneumonia, 876 deaths; pleurisy, 170 deaths; pulmonary congestion and apoplexy, 262 deaths; gangrene of the lung, 26 deaths; asthma, 158 deaths; pulmonary emphysema, 33 deaths; fibroid phthisis (miners' complaint), 262 deaths; other diseases of the respiratory system (tuberculosis excepted), 71 deaths.

(xxiv.) *Diseases of the Stomach (Cancer excepted).* In 1917 this heading includes: Ulcer of the stomach, 59 males, 46 females; and other diseases of the stomach (cancer excepted), 156 males, 133 females; a total of 394 deaths.

(xxv.) *Diarrhoea and Enteritis (Children under two years only).* The number of deaths due to these causes is always a large one, varying from 1719 deaths in 1917 to a maximum of 3506 deaths in 1914. The total for 1917 was 1719, distributed amongst the six States as follows:—New South Wales, 423 males, 312 females, total 735; Victoria, 219 males, 165 females, total 384; Queensland, 185 males, 126 females, total 311; South Australia, 72 males, 62 females, total 134; Western Australia, 58 males, 41 females, total 99; and Tasmania, 28 males, 28 females, total 56.

The following are the death rates and percentages on total deaths due to infantile diarrhoea and enteritis in the States and Territories for the year 1917:—

**DEATH RATES (a) FROM INFANTILE DIARRHOEA AND ENTERITIS, AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1917.**

State.	Death Rates (a) from Infantile Diarrhoea and Enteritis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.46	0.33	0.39	4.05	4.16	4.10
Victoria	0.33	0.22	0.27	2.75	2.50	2.64
Queensland	0.53	0.38	0.46	4.59	4.98	4.75
South Australia	0.36	0.27	0.31	3.00	3.15	3.07
Western Australia	0.37	0.27	0.32	3.22	4.24	3.58
Tasmania	0.28	0.28	0.28	3.02	3.33	3.17
Commonwealth	0.41	0.29	0.35	3.57	3.60	3.58

(a) Number of deaths from these diseases per 1000 of mean population.

As a large number of these deaths is directly due to improper feeding, it would be interesting to know the percentage of infants who were bottle-fed, but, unfortunately, no provision exists for the registration of this information. The number of deaths was larger than usual in 1908, particularly in Victoria, and to a lesser degree in South Australia and in Tasmania, owing to the phenomenal heat experienced in the early part of that year. The death rates for the three States named were 0.83, 0.61, and 0.71 per 1000 respectively in 1908, compared with 0.55, 0.45 and 0.48 in 1907, and with 0.50, 0.36 and 0.51 in 1911. The rate in 1912 was higher in every State, Tasmania excepted, than that for 1911, the increase being particularly noticeable in New South Wales, Queensland, and Western Australia. In 1913 all the States, with the exception of New South Wales and South Australia, experienced lower rates than in 1912, and in 1914 the rate fell in New South Wales and Western Australia, while it rose in Victoria, South Australia and Tasmania, and remained stationary in Queensland. The rates for 1915 were considerably lower than those for 1914 in every State with the exception of Queensland and South Australia, while in 1916 Victoria, South Australia, and Tasmania had higher rates than in 1915. In 1917 every State experienced a large fall, the rates in Victoria, South Australia, and Tasmania being less than half those of 1916.

(xxvi.) *Appendicitis and Typhlitis*. Prior to 1910, deaths from these causes were included in *Other Diseases*, paragraph xxxvii. Deaths numbered 293 in 1908, 344 in 1909, 315 in 1910, 320 in 1911, 347 in 1912, 364 in 1913, 374 in 1914, 356 in 1915, 321 in 1916, and 321 in 1917, viz., 185 males and 136 females.

(xxvii.) *Hernia, Intestinal Obstructions*. The number of deaths has not varied much from year to year, the number registered in 1908 being 389; and in 1917, 449, viz., 245 males and 204 females.

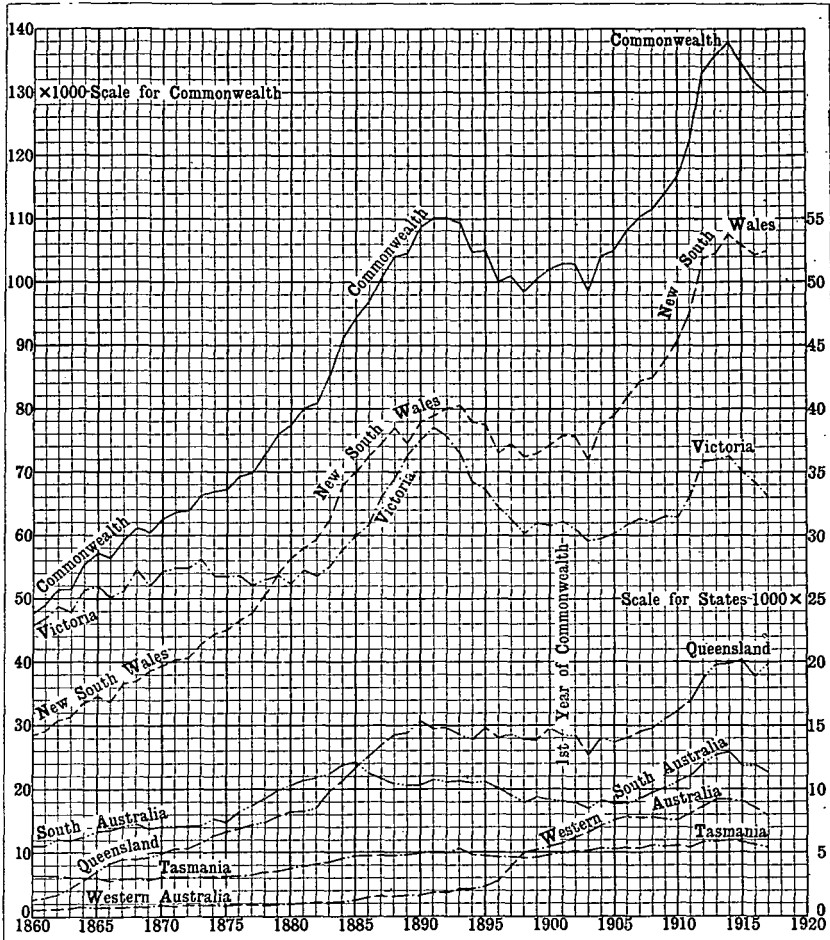

(xxviii.) *Cirrhosis of the Liver*. There is little variation in the number of deaths from 1908 to 1917. 362 deaths were registered in 1908 and 835 in 1917, viz., 214 males and 121 females.

(xxix.) *Nephritis and Bright's Disease*. The number of deaths attributable to these diseases from year to year is a very large one. In 1908 there were registered the deaths of 1140 males and 724 females; in 1909, those of 1076 males and 723 females; in 1910, 1771, 1077 males and 694 females; in 1911, 1951, 1197 males and 754 females; in 1912, 2188, 1352 males and 836 females; in 1913, 2211, 1363 males and 848 females; in 1914, 2127, 1281 males and 846 females; in 1915, 2274, 1413 males and 861 females; in 1916, 2329, 1416 males and 913 females; and in 1917, 2203, 1343 males and 860 females. Of the deaths registered in 1917, those of 89 males and 77 females were ascribed to acute nephritis, and those of 1254 males and 783 females to Bright's Disease. New South Wales was responsible for 786 deaths; Victoria for 714; Queensland for 355; South Australia for 195; Western Australia for 117; Tasmania for 35; and Federal Territory for 1; making a total of 2203.

(xxx.) *Non-cancerous Tumours and other Diseases of the Female Genital Organs*. Deaths in 1908 numbered 159; in 1909, 130; in 1910, 149; in 1911, 120; in 1912, 145; in 1913, 153; in 1914, 138; in 1915, 139; in 1916, 153; and 1917, 148. Included in the 148 deaths registered in 1917 were the following:—Non-puerperal uterine hæmorrhage, 2; non-cancerous uterine tumours, 43; other diseases of the uterus, 37; cysts and ovarian tumours, 26; salpingitis and other diseases of the female genital organs, 40.

(xxxi.) *Puerperal Septicæmia (Puerperal Fever, Puerperal Peritonitis, Puerperal Phlebitis)*. The number of deaths is fairly constant, varying from a maximum of 282 in 1916 to a minimum of 182 in 1915.

GRAPHS SHEWING TOTAL ANNUAL BIRTHS IN THE COMMONWEALTH AND  
STATES OF AUSTRALIA, 1860-1917.

(See Table page 162.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth, and 1000 for the States.

The scale on the left relates to the Commonwealth, and that on the right to the States.

The distances upwards from the common zero lines of the States and Commonwealth, marked 0, denote the total annual number of births in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the characters of the lines used are as follows:—Commonwealth, —————; New South Wales, - - - - -; Victoria, . . . . .; Queensland, — · — · —; South Australia, — — — — —; Western Australia, — · — · —; Tasmania, — · — · —.

GRAPHS SHEWING TOTAL ANNUAL MARRIAGES IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1917.

(See Table page 180.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 500 marriages for the Commonwealth and 250 for the States.

The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the zero line, marked 0, denote the total annual number of marriages in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the lines used are similar to those for births on page 217.

GRAPHS SHEWING TOTAL ANNUAL DEATHS IN THE COMMONWEALTH AND STATES OF AUSTRALIA. 1860-1917.

(See Table page 188.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 1000 persons for the Commonwealth and 500 for the States.

The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the common zero line for States and Commonwealth, marked 0, denote the total annual number of deaths in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the curves refer are written thereon, and the lines used are similar to those for births on page 217.

GRAPHS SHEWING GENERAL BIRTH, NATURAL INCREASE, DEATH MALE-  
GENERAL, AND FEMALE), AND MARRIAGE RATES IN THE COMMONWEALTH OF  
AUSTRALIA, 1860-1917.

(See pages 163, 180, 187 and 245.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height, according to the character of the curve, one half per thousand of the population—the basic line being five per thousand of the population.

BIRTH RATE GRAPHS. (See next page.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

DEATH RATE GRAPHS. (See next page.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one death per thousand of the population. The zero for each State is shewn by a thickened line.

(xxxii.) *Other Puerperal Accidents of Pregnancy and Confinement.* The deaths in 1908 numbered 404; in 1909, 376; in 1910, 373; in 1911, 406; in 1912, 413; in 1913, 428; in 1914, 419; in 1915, 394; in 1916, 411; and in 1917, 482. Included in the 482 deaths registered in 1917 were the following:—Accidents of pregnancy, 92; puerperal hæmorrhage, 96; other accidents of childbirth, 97; puerperal albuminuria and convulsions, 137; puerperal phlegmasia alba dolens, embolus, sudden death, 53; death following childbirth, 6; puerperal diseases of the breast, 1.

(xxxia.) *All Puerperal Causes.* The 732 deaths registered in 1917 under the two preceding headings will be found tabulated in "Bulletin No. 35; Commonwealth Demography" under various aspects. It will suffice to repeat here the following facts:—

Of the 732 mothers who died from puerperal causes during the year 1917, 677 were married and 55 were single. As the total number of nuptial confinements was 122,131, and of ex-nuptial confinements 6321, it follows that one in 180 of married mothers, and one in 115 of single mothers, died from puerperal causes, the general proportion being one in 175, as against one in 215 in 1914, and one in 181 in 1908.

The ages of the mothers who died varied from 17 to 49 years, and are shewn in the following table:—

#### AGES OF MOTHERS WHO DIED FROM PUERPERAL CAUSES, COMMONWEALTH, 1917.

Age at Death.	Married Women.	Single Women.	Total.	Age at Death.	Married Women.	Single Women.	Total.
17 years ...	2	3	5	35 years ...	27	1	28
18 " ...	1	3	4	36 " ...	38	...	38
19 " ...	9	4	13	37 " ...	29	2	31

32 " ...	28	...	28				
33 " ...	36	1	37				
34 " ...	30	2	32				
				Total deaths,	677	55	732

Of the 677 married women shewn in the above table, 106 left no children, 141 left 1 child each, 119 left 2, 90 left 3, 62 left 4, 46 left 5, 35 left 6, 24 left 7, 20 left 8, 13 left 9, 4 left 10, 8 left 11, 5 left 12, 3 left 13, and 1 left 14 children. The total number of children of the 677 mothers was 2023.

Twenty-three of the mothers who died had been married less than one year, 86 between one and two years, 61 between two and three years, the duration of marriage ranging up to 29 years, apart from 16 cases in which the date of marriage cannot be stated. This tabulation will be found in detail, distinguishing the ages at marriage, in "Bulletin No. 35; Commonwealth Demography," as will a further tabulation shewing in

combination the duration of marriage and previous issue. These tables shew, for instance, that one mother, who had been married at the age of 19 years, died at the age of 44, in the 26th year of her marriage, leaving 14 children.

(xxxiii.) *Congenital Debility and Malformations.* The total deaths registered under these heads in 1917 were 3423, of whom 3352 were children under 1 year of age, inclusive of 3021 under three months. The figures include:—Malformations, 306 males, 245 females, total 551; and congenital debility, icterus, and sclerema of children under one year of age, 1666 males and 1206 females, total 2872; or a grand total of 3423. Of these deaths, 1405 were registered in New South Wales, viz., 812 males and 593 females; 874 in Victoria, viz., 508 males and 366 females; 490 in Queensland, viz., 274 males and 216 females; 304 in South Australia, viz., 180 males and 124 females; 208 in Western Australia, viz., 111 males and 97 females; 139 in Tasmania, viz., 84 males and 55 females; 2 males in the Northern Territory, and 1 male in Federal Territory.

(xxxiv.) *Senile Debility.* The deaths ascribed to "old age" form a large group, and are in excess of those due to infantile debility. In 1917, 4770 deaths were attributed to this cause, and were distributed among the States as follows: 1774 occurred in New South Wales, viz., 1027 males and 747 females; 1755 in Victoria, viz., 912 males and 843 females; 386 in Queensland, viz., 239 males and 147 females; 444 in South Australia, viz., 217 males and 227 females; 199 in Western Australia, viz., 132 males and 67 females; 200 in Tasmania, viz., 95 males and 105 females; 11 males in the Northern Territory, and 1 female in the Federal Territory.

Of the males whose death was described as due to senility, one was aged between 45 and 50, 6 were between 50 and 54; 10 between 55 and 59; 58 between 60 and 64; 198 between 65 and 69; 443 between 70 and 74; 600 between 75 and 79; 645 between 80 and 84; 466 between 85 and 89; 146 between 90 and 94; 43 between 95 and 99; while 14 were 100 years old and upwards; and of three the age was not stated.

Of the females, one was between 50 and 54; 11 were between 55 and 59; 33 were between 60 and 64; 124 between 65 and 69; 279 between 70 and 74; 525 between 75 and 79; 558 between 80 and 84; 385 between 85 and 89; 174 between 90 and 94; 42 between 95 and 99; while 5 were 100 years old and upwards.

(xxxv.) *Violence.* A very large number of deaths is due every year to external violence, and, as might be expected from the fact that their occupations expose them much more to accidents, males largely predominate. The figures quoted are exclusive of suicides, which have been treated as a separate group. Deaths ascribed to violence numbered, in 1908, 2922, viz., 2187 males and 735 females; in 1909, 2664, viz., 2050 males and 614 females; in 1910, 2738, viz., 2128 males and 610 females; in 1911, 3018, viz., 2323 males and 695 females; in 1912, 3237, viz., 2559 males and 678 females; in 1913, 3168, viz., 2503 males and 665 females; in 1914, 3121, viz., 2458 males and 663 females; in 1915, 2851, viz., 2251 males and 600 females, in 1916, 2712, viz., 2134 males and 578 females; and in 1917, 2656, viz. 2069 males and 587 females. Of the deaths registered in 1917, those of 785 males and 232 females occurred in New South Wales; those of 466 males and 157 females in Victoria; those of 378 males and 86 females in Queensland; those of 187 males and 59 females in South Australia; those of 186 males and 39 females in Western Australia; those of 59 males and 14 females in Tasmania; and those of 8 males in the Northern Territory.

The following table shews the various kinds of violent deaths which occurred in 1917, distinguishing males and females:—

## DEATHS FROM EXTERNAL VIOLENCE, COMMONWEALTH, 1917.

Cause of Death.	Males.	Females.	Total.
Poisoning by food ... ..	17	12	29
Venomous bites and stings ... ..	11	2	13
Other acute poisonings ... ..	24	14	38
Conflagration ... ..	6	5	11
Burns (conflagration excepted) ... ..	130	151	281
Absorption of deleterious gases (conflagration excepted) ... ..	34	16	50
Accidental drowning ... ..	449	114	563
Traumatism by firearms ... ..	83	13	96
Traumatism by cutting or piercing instruments ... ..	4	1	5
Traumatism by fall ... ..	239	54	293
Traumatism in mines or quarries ... ..	85	...	85
Traumatism by machines ... ..	44	...	44
Traumatism by other crushing (vehicles, railways, etc.) ... ..	486	82	568
Injuries by animals ... ..	46	4	50
Starvation, thirst, fatigue ... ..	33	3	36
Excessive cold ... ..	8	...	8
Effects of heat ... ..	57	16	73
Lightning ... ..	5	...	5
Electricity (lightning excepted) ... ..	10	...	10
Homicide by firearms ... ..	15	6	21
Homicide by cutting or piercing instruments... ..	4	6	10
Homicide by other means ... ..	21	21	42
Fractures (cause not specified) ... ..	63	38	101
Other external violence ... ..	195	29	224
Total Deaths ... ..	2,069	587	2,656

In every kind of violent death there was, therefore, an excess of males, with the exception of burning accidents, in which female deaths predominated, and homicide by cutting or piercing instruments.

(xxxvi.) *Suicide*. It may be said that suicides have shewn a slight tendency to increase during recent years, the number in 1908 having been 497, viz., 413 males and 84 females; in 1909, 495, viz., 398 males and 97 females; in 1910, 516, viz., 432 males and 84 females; in 1911, 544, viz., 446 males and 98 females; in 1912, 631, viz., 514 males and 117 females; in 1913, 647, viz., 516 males and 131 females; in 1914, 643, viz., 534 males and 109 females; in 1915, 653, viz., 536 males and 122 females; in 1916, 577, viz., 466 males and 111 females, and in 1917, 502, viz., 408 males and 94 females. Of the suicides in 1917, those of 133 males and 39 females occurred in New South Wales; those of 98 males and 30 females in Victoria; those of 88 males and 15 females in Queensland; those of 32 males and 6 females in South Australia; those of 45 males and 3 females in Western Australia; those of 8 males and 1 female in Tasmania; those of 3 males in the Northern Territory, and 1 in Federal Territory.

The modes adopted by persons who committed suicide in the years 1908 to 1917 were as follows:—

**MALE AND FEMALE SUICIDES, COMMONWEALTH (MODES ADOPTED), 1908 to 1917.**

Mode of Death.	Males.		Females.		Total.	
	Total of 9 years 1908-16.	191.	Total of 9 years 1908-16.	1917.	Total of 9 years 1908-16.	1917.
Poisoning ... ..	887	79	498	45	1,385	124
Asphyxia ... ..	13	...	3	2	16	2
Hanging or Strangulation ... ..	664	48	122	13	786	61
Drowning ... ..	305	37	151	17	456	54
Firearms ... ..	1,454	144	64	7	1,518	151
Cutting instruments ... ..	681	83	65	3	746	86
Precipitation from a height ... ..	36	2	16	4	52	6
Crushing... ..	59	6	12	1	71	7
Other modes ... ..	156	9	22	2	178	11
Total ... ..	4,255	408	953	94	5,208	502

The death rates from suicide and the percentage on total deaths borne by suicides are shewn in the following table:—

**DEATH RATES (a) FROM SUICIDE AND PERCENTAGE ON TOTAL DEATHS, 1917.**  
COMMONWEALTH.

State.	Death Rates (a) from Suicide.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.14	0.04	0.09	1.27	0.52	0.96
Victoria ...	0.15	0.04	0.09	1.23	0.45	0.88
Queensland ...	0.25	0.05	0.15	2.19	0.59	1.57
South Australia ...	0.16	0.03	0.09	1.33	0.31	0.87
Western Australia	0.28	0.02	0.16	2.50	0.31	1.73
Tasmania ...	0.08	0.01	0.05	0.86	0.12	0.51
Northern Territory	0.75	...	0.60	5.77	...	4.76
Federal Territory	0.72	...	0.40	14.29	...	7.69
Commonwealth	0.17	0.04	0.10	1.48	0.46	1.05

(a) Number of deaths from suicide per 1000 of mean population.

From the following table, which shews the ages of the persons who committed suicide in 1917, it will be seen that both extreme youth and extreme old age are represented:—

**AGES OF PERSONS WHO COMMITTED SUICIDE, COMMONWEALTH, 1917.**

Ages.	M.	F.	Total.	Ages.	M.	F.	Total.
10 years and under 14	...	1	1	60 years and under 65	29	2	31
15 " " 20	5	10	15	65 " " 70	19	2	21
20 " " 25	16	14	30	70 " " 75	16	3	19
25 " " 30	34	15	49	75 " " 80	6	1	7
30 " " 35	34	10	44	80 " " 85	2	...	2
35 " " 40	40	8	48	85 " " 90	1	...	1
40 " " 45	54	8	62	Age not stated	2	1	3
45 " " 50	45	12	57				
50 " " 55	62	2	64				
55 " " 60	43	5	48				
				Total Deaths ...	408	94	502

The following table shows the occupations of the 408 males who committed suicide:—

**OCCUPATIONS OF MALE PERSONS WHO COMMITTED SUICIDE, 1917.**  
**COMMONWEALTH.**

Occupation.	Deaths.	Occupation.	Deaths.
Professional class ... ..	38	Pastoral class ... ..	20
Domestic class ... ..	15	Working in mines and quarries ...	29
Mercantile class ... ..	56	Other primary producers ... ..	9
Engaged in transport and communication ... ..	27	Independent means ... ..	4
Manufacturing class ... ..	21	Dependents ... ..	4
Engaged in building and construction ... ..	15	Occupation not stated ... ..	18
Indefinite industrial workers ...	104		
Agricultural class ... ..	53	Total Deaths ... ..	408

It has been said that suicide has become more frequent during recent years, but an examination of the figures from the year 1871 onwards shews that the assertion needs qualification. The absolute figures have certainly increased, but proportionately to the population the figures for 1906-10 were practically the same as those for 1886-90 and 1891-95. The figures for the five years 1911-15, shew, however, a regrettable increase, not only absolutely, but also in proportion to the population. Both 1916 and 1917 shew lower figures and percentages than the average of 1911-15, and in 1917 particularly, the figures in proportion to population decreased almost to the level of the period 1871-85. No particulars are available for Western Australia prior to 1886, and from 1886 to 1895 the sexes are not distinguished. The figures for the first five periods are, therefore, exclusive of Western Australia:—

**SUICIDES, COMMONWEALTH, 1871-75 to 1917.**

Period.	Number of Suicides.			Suicides per One Million.			Suicides of Females to 100 Suicides of Males. Based on	
	Males.	Females.	Total.	Males.	Females.	Total.	Absolute Figures.	Rates.
1871-75	715	150	865	150.94	37.56	99.07	20.98	24.88
1876-80	878	145	1,023	159.69	31.06	100.62	16.51	19.45
1881-85	999	183	1,182	152.58	32.90	97.61	18.32	21.56
1886-90	1,394	292	1,686	179.20	43.97	116.92	20.95	24.54
1891-95	1,574	337	1,911	181.34	44.09	117.07	21.41	24.31

(a) 1705 inclusive of Western Australian figures. (b) 1984 inclusive of Western Australian figures. (c) 116.49 inclusive of Western Australian figures. (d) 119.11 inclusive of Western Australian figures.

In the fifth issue of this Year Book (pp. 240, etc.), the result of a series of investigations into the periodicity of suicide was published. The paper was partly reprinted in the sixth issue (pp. 241, etc.), but is not repeated in the present issue.

(xxxvii.) *Other Diseases.* The number of causes included under this heading is a very large one, amounting to no less than 79 of the items shewn in the detailed classification, and deaths were recorded under every one of these with the exception of the following:—Glanders, rabies, pellagra, occupational poisonings other than lead poisoning, intestinal parasites, chyluria, and non-puerperal diseases of the breast. The total number of deaths under "other diseases" in 1908 was 7417, viz., 4351 males and

3066 females; in 1909, 7419, viz., 4344 males and 3075 females; in 1910, 7794, viz., 4590 males and 3204 females; in 1911, 7652, viz., 4508 males, 3144 females; in 1912, 8300, viz., 4777 males and 3523 females; in 1913, 8241, viz., 4794 males and 3447 females; in 1914, 8670, viz., 5081 males and 3589 females; in 1915, 9090, viz., 5259 males and 3831 females; in 1916, 9433 viz., 5489 males and 3944 females, and in 1917, 8871, viz., 5147 males and 3724 females. In accordance with the revised edition of the classification, the following changes were made in this heading during 1910: beri-beri is now included under this heading instead of under xii., "Other Epidemic Diseases." Other diseases of the respiratory system (2212 deaths) are now shewn under a new head (xxiii.), and appendicitis and typhlitis (356 deaths) under head xxvi. Some of the diseases included here account for very considerable numbers of deaths. Thus there were 745 deaths ascribed to diseases of the arteries, atheroma, and aneurism; 613 to "other diseases peculiar to early infancy"; 549 to diabetes; 548 to diarrhoea and enteritis of children over two years of age and of adults; 459 to acute endocarditis; 434 to embolism and thrombosis; 345 to anæmia and chlorosis; 313 to "paralysis without indicated cause"; 286 to convulsions of children under five years of age; 252 to "other diseases of the nervous system"; 245 to "other diseases of the spinal cord"; 222 to acute and chronic alcoholism; 208 to diseases of the prostate; and 204 to acute articular rheumatism. Particulars of the deaths included in 1917 are shewn in the following table:—

#### CAUSES OF DEATHS INCLUDED UNDER "OTHER DISEASES," COMMONWEALTH, 1917.

Causes.	M.	F.	T'tal.	Causes.	M.	F.	T'tal.

(xxxviii.) *Unspecified or Ill-defined Diseases.* The number of cases which has to be included here is a considerable one from year to year, comprising 1262 in 1908, 1087 in 1909, 598 in 1910, 460 in 1911, 590 in 1912, 614 in 1913, 644 in 1914, 717 in 1915, 638 in 1916, and 667, viz., 420 males and 247 females, in 1917. The detailed classification distinguishes these ill-defined diseases under three headings:—Ill-defined organic diseases, including such definitions as dropsy, anasarca, ascites, general œdema, etc.; sudden death, including syncope; and unspecified or ill-defined causes, of which the following are specimens:—Asthenia, coma, dentition, exhaustion, heart failure, etc. In 1917 the number of cases of death which would have to be classed under the first of these categories was 85; those belonging to the second, 73; and those belonging to the third, 509. It is, of course, true that there must always occur some cases where the disease is not well characterised, or where sufficient information is not procurable to allow of a clear definition being given in the certificate of death, but in the majority of cases included under this heading a more complete diagnosis and consequently a more satisfactory certificate would no doubt have been possible.

In the fifth issue of this Year Book, pp. 234, etc., some observations were published, dealing with the incidence of scarlet fever, measles, whooping cough, diphtheria and croup, typhoid, diarrhoea, enteritis, and dysentery.

**19. Causes of Death in Classes.**—The figures presented in the preceding paragraphs relate to certain definite causes of death. It is almost generally acknowledged that figures of this kind are of greater value in medical statistics than is a classification under general headings. The classification under fourteen general headings adopted by the compilers of The International Nomenclature is, however, shewn in the following table, together with the death rates and percentages on total deaths pertaining to those classes:

**DEATHS, DEATH RATES (a), AND PERCENTAGES ON TOTAL DEATHS IN CLASSES, 1917.—COMMONWEALTH.**

Class.	Total Deaths.			Death Rate. (a)			Percentage on Total Deaths.		
	M.	F.	Total.	M.	F.	Total.	M.	F.	Total.

(a) Number of deaths per 1000 of mean population.

**20. Deaths of Children under 1 Year.**—"Bulletin No. 35; Commonwealth Demography" contains tables shewing for twenty-one causes the age at death of children dying during the first year of life. In the Bulletin mentioned, the particulars are published for males and females separately for the States, Territories and Commonwealth, but the totals for the Commonwealth only are here shewn for both sexes combined:—

## DEATHS OF CHILDREN UNDER 1 YEAR, COMMONWEALTH, 1917.

Age at Death.	Whooping Cough.	Pulmonary Tuberculosis.	Acute Miliary Tuberculosis.	Tubercular Meningitis.	Abdominal Tuberculosis.	White Swellings.	Tuberculosis of Other Organs.	Disseminated Tuberculosis.	Syphilis.	Simple Meningitis.	Cerebro-Spinal Meningitis.	Convulsions.

Total under 1 year	163	277	225	1,359	65	480	2,872	613	13	505	7,266

It will be seen that the maximum number of deaths from convulsions, pneumonia, acute bronchitis, malformations, congenital debility, icterus and sclerema, other diseases peculiar to early infancy, and lack of care, occurred during the first month of life, while broncho-pneumonia was most fatal during the second and third

months. Diarrhoea and enteritis carried off more children in the fourth and fifth months than in any other, the numbers gradually decreasing toward the end of the year. Whooping cough reached its maximum during the third month of life.

21. **Ages at Death of Married Males and Females, and Issue.**—"Bulletin No. 35; Commonwealth Demography" contains a number of tables, for the Commonwealth, shewing the age at marriage, age at death, duration of life after marriage, birthplaces, and occupations, in combination with the issue of married persons who died in 1917. A short summary of the tables mentioned is given hereunder. Deaths of married males in 1917 numbered 13,718, and of married females, 12,470. The ages at death of the males ranged from 20 to 106 years, and those of the females, from 17 to 105 years. The tabulations mentioned in the sequel deal, however, with only 13,604 males and 12,423 females, the information in the remaining 161 cases being too incomplete to be made use of. The total number of children in the families of the 13,604 males was 69,952, the maximum in one family being 23; and of the 12,423 females, 64,626, with a maximum of 23. The average number of children is shewn for various age-groups in the following table:—

#### AGES AT DEATH OF MARRIED MALES AND FEMALES, AND AVERAGE ISSUE.

COMMONWEALTH, 1917.

Age at Death.	Average Family of Males.	Average Family of Females.	Age at Death.	Average Family of Males.	Average Family of Females.
Under 20 years ...	...	0.50	70 to 74 years ...	6.25	6.45
20 to 24 years ...	0.98	1.18	75 " 79 " ...	6.56	6.44
25 " 29 " ...	1.50	1.88	80 " 84 " ...	6.60	6.50
30 " 34 " ...	1.94	2.61	85 " 89 " ...	6.86	6.47
35 " 39 " ...	2.76	3.37	90 " 94 " ...	6.87	5.85
40 " 44 " ...	3.19	3.97	95 " 99 " ...	6.24	5.95
45 " 49 " ...	3.72	4.04	100 years and upwards	6.91	2.80
50 " 54 " ...	4.20	4.50	Age not stated ...	6.50	6.00
55 " 59 " ...	4.66	5.33			
60 " 64 " ...	5.17	5.67			
65 " 69 " ...	5.73	6.30			
			All ages ...	5.14	5.20

The figures shewn in the preceding table include the issue both living and dead; and the proportion between them, taking the issue of deceased males and females together, was about as 1000 to 298, or, roughly speaking, as ten to three. The totals are shewn in the following table:—

#### ISSUE OF MARRIED MALES AND FEMALES.

COMMONWEALTH, 1917.

Issue of Married Males.	Males.	Females.	Total.	Issue of Married Females.	Males.	Females.	Total.
Living ...	27,674	27,323	54,997	Living ...	24,394	24,277	48,671
Dead ...	8,153	6,802	14,955	Dead ...	8,681	7,274	15,955
Total ...	35,827	34,125	69,952	Total ...	33,075	31,551	64,626

These figures shew a masculinity in the births of 104.91, which agrees fairly well with the experience of the birth statistics, the masculinity of the births in the Commonwealth from 1907 to 1917 having averaged 105.16.

**22. Ages at Marriage of Males and Females, and Issue.**—While the table giving the average families of married males and females naturally shews an increase in the averages with advancing ages at death, the following table, which gives the average families of males and females according to the age at marriage of the deceased parents, shews a corresponding decrease in the averages as the age at marriage advances :—

### AGES AT MARRIAGE OF MALES AND FEMALES, AND AVERAGE ISSUE.

COMMONWEALTH, 1917.

Age at Marriage.	Average Family of Males.	Average Family of Females.	Age at Marriage.	Average Family of Males.	Average Family of Females.
Under 20 years ...	6.73	7.11	55 to 59 years ...	1.09	...
20 to 24 years ...	6.19	5.55	60 „ 64 „ ...	0.80	...
25 „ 29 „ ...	5.48	4.33	65 years and upwards ...	0.10	...
30 „ 34 „ ...	4.66	2.84	Age not stated ...	4.11	4.73
35 „ 39 „ ...	3.99	1.46			
40 „ 44 „ ...	3.07	0.27			
45 „ 49 „ ...	2.10	...			
50 „ 54 „ ...	1.04	...	All ages ...	5.14	5.20

It will be seen that of women who were married at ages from 40 to 44 years; one in every four gave birth to a child.

**23. Duration of Life after Marriage of Males and Females.**—The duration of life after marriage has been tabulated for males and females both in combination with the age at marriage, and with the total and average issue. The tables shewing the result do not, however, lend themselves to condensation, and are, therefore, omitted here. They will be found in “Bulletin No. 35 of Commonwealth Demography,” pages 209 to 214.

**24. Birthplaces of Married Males and Females, and Issue.**—The following table shews the birthplaces of married males and females whose deaths were registered in 1917, together with their average issue. No generalisations can, of course, be made in those cases where the number of deaths is small, and where the average family had to be worked out on small figures. But where the figures are comparatively large, as in the case of natives of the Commonwealth, differences occur between the averages of the individual States which appear inexplicable on any other ground than that of inefficient registration in some of the States. It will be noted that the differences occur both in the male and female averages. Although the figures apply to the Commonwealth as a whole, it must be borne in mind that the vast majority of deaths of natives of any one State are registered in that particular State. The average family of all deceased males who were natives of the Commonwealth was 4.65, and that of deceased females who were natives of the Commonwealth, 4.59.

Dependents	107	4.51
Occupation not stated	420	5.44
Total	13,604	5.14

In the fifth issue of this Year Book (pp. 227 to 229), a series of observations was published dealing with the Commonwealth Rates of Infantile Mortality. These observations are not reprinted in the present issue.

### § 4. Life Tables, 1881-1910.

1. **General.**—Until the Census of 1911, in connection with which numerous and extensive general life tables were compiled, the construction of such tables in Australia had in only two previous instances been carried out by a Government department. One of these was the construction of life tables for New South Wales in connection with the Census of 5th April, 1891, the other was the construction of a similar table for Western Australia in connection with the Census of 31st March, 1901. Several other investigations of the mortality experience of the Australian general population had, however, been made, and had formed the subject of papers read before actuarial and kindred societies, but in no case had complete tables for the whole of Australia been compiled.

In addition to the investigation of the mortality of the general population, there have been several Australian investigations of selected data, of which the more important are the following:—(i.) Life Assurance Experience; (ii.) Friendly Societies' Experience; (iii.) Public Service Experience.

A brief outline of the more important tables constructed from Australian data is given on pp. 298 *et seq.* of Vol. I. of "The Census of the Commonwealth of Australia, 1911."

2. **Australian Life Tables at Census of 1911.**—(i.) *Range of Tables.* For the purpose of presenting a comprehensive view of the variations in mortality in the several Australian States during the thirty years 1881-1910, a series of forty-two life tables was constructed in connection with the Census of 1911. These tables represented separately the male and female experience in each State and in the Commonwealth as a whole for each of the decennia 1881-90, 1891-1900, and 1901-10. They are given in full on pp. 1209 to 1278 of Volume III. of "The Census of the Commonwealth of Australia, 1911," and in a summary and comparative form on pp. 2149 to 2183 of that volume.

(ii.) *Extent of Material.* A full account of the material employed and of the methods of construction used is given in Volume I. of the same publication, on pp. 293 to 346. The total number of deaths of persons of each sex on which the tables were based is given in the following table:—

#### DEATHS IN AUSTRALIA, 1881 to 1910.

State.	MALES.			FEMALES.

98	395.68	399.28	449.46	377.60	406.83	415.84
99	426.05	431.77	480.02	405.95	446.61	450.50
100	473.92	481.14	525.36	452.82	501.91	500.73
101	547.27	555.01	592.75	526.94	578.82	573.66
102	654.08	661.00	689.46	637.04	683.43	676.42
103	802.33	806.73	822.76	791.85	821.83	816.14
104	1000.00	1000.00	1000.00	1000.00	1000.00	1000.00

The following is an example of the method of interpreting this table:—According to the Australian experience for the decennium 1881-90, out of each 1000 males who reached age thirty, the number who, on the average, died before reaching age thirty-one was 8.67. The corresponding numbers for the experience of 1891-1900 and 1901-10 were 6.98 and 5.19 respectively.

(iv.) *Survivors out of 100,000 at Birth.* The next table shews for each sex the number of persons who, out of 100,000 at birth, would survive each successive age if the mortality experience of the Commonwealth as a whole in the three decennia under review remained in force throughout life :—

**SURVIVORS OUT OF 100,000 AT BIRTH (COMMONWEALTH MORTALITY EXPERIENCE).**

The following is an example of the method of interpreting this table:—If the rates of mortality experienced in Australia during the decennium 1881-90 remained in operation throughout the lifetime of a group of males who numbered 100,000 at birth, the number surviving at age thirty would be 70,531. The corresponding numbers for the experience of 1891-1900 and 1901-10 are 75,706 and 80,844 respectively.

(v.) *Expectation of Life.* The final table furnishes for each of the three decennia under review and for each sex the expectation of life at each age from 0 upwards in respect of the Commonwealth as a whole.

For any given mortality table the "expectation of life" at any age is the further period which, on the average, will be lived by the persons attaining that age, on the assumption that the rates of mortality disclosed by the table are experienced.

96	2.016	2.008	1.755	2.109	2.000	1.936
97	1.869	1.853	1.629	1.958	1.821	1.779
98	1.710	1.689	1.499	1.793	1.638	1.616
99	1.526	1.502	1.351	1.599	1.442	1.438
100	1.315	1.293	1.180	1.373	1.233	1.240
101	1.086	1.066	.989	1.125	1.015	1.027
102	.841	.830	.786	.868	.795	.806
103	.598	.593	.583	.610	.577	.585
104	.347	.350	.373	.342	.361	.359

The following is an example of the method of interpreting this table:—If the rates of mortality experienced in Australia during the decennium 1881-90 had remained in operation throughout the lifetime of any group of males, the average period beyond age thirty lived by each of those who reached age thirty would have been 33.642 years. The corresponding figures for the experience of 1891-1900 and 1901-10 are 35.110 and 36.520 respectively.

### § 5. Graphical Representation of Vital Statistics.

1. **General.**—The progressive fluctuations of the numbers representing the total births and marriages are important indexes of the economic conditions and social ideals of a community. For this reason graphs have been prepared (see pages 217 and 218), shewing these fluctuations from 1860 to 1917, both for the States and the Commonwealth. The facts are very significant from the national point of view, and call for serious consideration. To properly appreciate the situation it should be remembered that, normally, the increase of births and also of marriages will be similar to the increase of population. Although the marriage curve shows a falling off in marriages after 1891 (see page 218), it shews a recovery in 1894, and, with the exception of a small fall for 1903, it continually advanced until 1915. In 1916 and 1917 a heavy falling off was recorded, unquestionably owing to the European War. The same characteristic is not seen in the curve of births, which, from 1904 onwards, rose continually to 1914, when there was a decline to 1917.

#### ACTUAL BIRTHS, DEATHS, AND MARRIAGES

EXPERIENCED IN THE COMMONWEALTH DURING THE YEARS 1890 TO 1917,  
COMPARED WITH THE NUMBER THAT WOULD HAVE OCCURRED IF THE  
RATES OF 1890 HAD REMAINED IN OPERATION.

Year.	BIRTHS.		DEATHS.		MARRIAGES.	
	Actual.	Number of Births that would have been experienced if the 1890 birth rate had been in operation.	Actual.	Number of Deaths that would have been experienced if the 1890 death rate had been in operation.	Actual.	Number of Marriages that would have been experienced if the 1890 marriage rate had been in operation.
1890	108,683		44,449		23,725	
1891	110,187	111,802	47,430	45,737	23,862	24,419
1892	110,158	114,502	42,268	46,842	22,049	25,009
1893	109,322	116,617	45,801	47,707	20,631	25,470
1894	104,660	118,734	42,958	48,573	20,625	25,933
1895	105,084	111,002	43,080	49,501	21,564	26,428
1896	100,134	123,212	45,202	50,405	23,068	26,911
1897	101,137	125,419	43,447	51,308	23,939	27,393
1898	98,845	127,371	51,406	52,106	24,472	27,819
1899	100,638	129,088	47,629	52,809	25,958	28,194
1900	102,221	130,848	44,060	53,529	27,101	28,579
1901	102,945	132,599	46,330	54,245	27,753	28,961
1902	102,776	134,603	48,078	55,065	27,926	29,399
1903	98,443	136,189	47,293	55,714	25,977	29,745
1904	104,113	137,917	43,572	56,420	27,682	30,122
1905	104,941	139,959	43,514	57,256	29,004	30,569
1906	107,890	142,030	44,333	58,103	30,410	31,021
1907	110,347	144,248	45,305	59,011	32,470	31,505
1908	111,545	146,720	46,426	60,022	32,551	32,045
1909	114,071	149,526	44,172	61,170	33,775	32,658
1910	116,801	152,869	45,590	62,537	36,592	33,387
1911	122,193	157,072	47,869	64,257	39,482	34,306
1912	133,088	162,477	52,177	66,468	42,147	35,487
1913	135,714	168,032	51,789	68,740	41,594	36,700
1914	137,983	172,073	51,720	70,394	43,311	37,583
1915	134,871	173,159	52,782	70,838	45,224	37,820
1916	131,426	171,654	54,197	70,222	40,289	37,491
1917	129,965	171,484	48,029	70,153	33,666	37,454

The table printed above shews the number of births, marriages and deaths which would have been experienced had the rate for 1890 continued, and reveals the significance of the facts disclosed by the curves. It may be remarked that the death rate

has greatly improved, and among other countries Australia stands in a very favourable position in this respect. At the same time the decline in the marriage rate, overtaken once more in 1907, and the still more serious decline in the birth rate, in a country but sparsely populated, have an obvious and most important bearing on the national future, and on the extent to which it is desirable to promote immigration.

**2. Graphs of Annual Births, Commonwealth and States** (page 217).—A striking feature of the graphs of births is the practically continuous increase in the number of births exhibited in the graph for the Commonwealth from 1860 to 1891, and the marked variations of subsequent years. As the curve clearly shews, a turning point in the number of births occurred in 1891, whilst, as regards the separate States, New South Wales and Tasmania date their decline in number from 1893, Victoria from 1891, and Queensland from 1890. In South Australia the corresponding decline took place as early as 1885, while in Western Australia the increase in number of births has been practically continuous throughout.

It is of special interest to note the decline in births associated with the commercial crisis of 1891-3, and also the decline occurring in 1903, an accompaniment of the severe drought of that period.

In the case of New South Wales the graph crosses that of Victoria in 1879, *i.e.*, the births for that year were sensibly identical in the two States. A fairly continuous increase was experienced in the former State from 1860 to 1893, the only marked fluctuation being a sudden decline in 1889 and an equally rapid recovery in 1890. From 1893 to 1898 a somewhat rapid decline again took place, succeeded by a rise, the continuity of which was broken only by a sharp decline in 1903 and recovery in 1904. From 1904 to 1914 there was a gradual rise, followed in 1915, 1916 and 1917 by a continuous decline.

In the case of Victoria the graph shews the increase between 1860 and 1880 to have been comparatively slight, the curve being a gradual rise, with fluctuations more or less marked to 1873, with a subsequent decline. From 1880 to 1891 the increase in the number of births is seen to be very rapid and practically continuous, while from 1891 to 1898 an equally sharp and continuous decline was experienced. A further rise and fall took place between 1898 and 1903, succeeded by a continuous rise from the last-mentioned year to 1907, and a slight fall in 1908, followed by a recovery in 1909. A slight fall in 1910 was followed by a continuous rise to 1914, since which year a continuous decline has been experienced.

Starting in 1860 with a lower number of births than any State except Western Australia, the Queensland graph shews that the births increased somewhat rapidly until 1867. The equality in the number of births in Queensland and Tasmania in 1864 is shewn by the Queensland curve crossing the Tasmanian curve at the line for that year. From 1867 to 1882 a continuous though somewhat less rapid increase was experienced, followed by a very rapid rise to 1890, in which year Queensland's maximum number of births prior to 1909 and subsequent years was recorded. The South Australian graph is crossed by that of Queensland at the year 1885. From 1890 onwards the number of births has fluctuated somewhat, but has, on the whole, retained a practically stationary position at a height rather less than that of 1890. The most serious variation was a sudden fall in 1903, the drought year, and rapid recovery in 1904, with a further fall in 1905, and a continuous rise from 1906 to 1915. In 1916 there was a sudden fall, followed by a rapid rise in 1917.

The South Australian graph, a slow but practically continuous rise from 1860 to 1885, exhibits the steady increase in the total number of births. This rise is followed by a slow but fluctuating decline to 1903, and a slight recovery to 1914. In 1915 there was a rapid fall, a slight rise in 1916, and a further fall in 1917.

The Tasmanian curve may be regarded as made up of five portions, of which the first, from 1860 to 1877, represents a period of very slight variation, with, on the whole, an increase; the second, from 1877 to 1884, a period of continuous, and moderately rapid increase; the third, from 1884 to 1893, a period of rapid increase; the fourth,

from 1893 to 1898, a period of continuous but slow decrease; and the fifth, from 1898 to 1914, a period of steady recovery. Since 1914 there has been a continuous fall.

The Western Australian curve indicates that an increase, which was practically continuous but very slow, took place from 1860 to 1884, and that a somewhat quicker rate of increase, experienced from 1884 to 1896, was succeeded by a still more rapid and very satisfactory rate of increase from 1896 to 1906. A slight fall was apparent to 1910, followed by a rapid rise to 1913. Since 1913 there has been a decline.

It will be seen that the years in which the highest points were reached by the several curves are as follows:—

State ...	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Year ...	1914	1891	1915	1914	1913	1914	1914

3. **Graphs of Annual Marriages, Commonwealth and States** (page 218).—The Commonwealth marriage graph from 1860 to 1885 reveals a moderate but somewhat fluctuating increase in the annual number of marriages between 1860 and 1871, a more rapid increase between 1871 and 1879, and a still more rapid increase between 1879 and 1885. From 1885 to 1891 the numbers continued to increase, but with marked fluctuations in rate. The financial crisis associated with the period subsequent to the latter year was accompanied by a strongly-marked decline in the number of marriages, which reached its lowest point in 1894. From that year onwards a fairly rapid recovery was effected, the record for 1891 being exceeded by that of 1897. This progress was maintained until 1902, when the severe drought of that and the succeeding year was collateral with a rapid fall in the number of marriages. An equally rapid recovery, however, has since taken place, and the number of marriages in the Commonwealth during 1915 was greater than in any preceding year. In 1916, and 1917, as already mentioned, there was a heavy falling off.

4. **Graphs of Annual Deaths, Commonwealth and States** (page 219).—The curves shewing the progression of the annual number of deaths indicate clearly that the periods for which exceptionally large numbers of deaths occurred were:—(a) 1866-7, (b) 1875-6, (c) 1884-5, (d) 1889-1891, (e) 1893, (f) 1898, and (g) 1902-3. It is remarkable that in each of the periods specified the phenomenon of a relatively high number of deaths was experienced in the majority of the States. Thus, as regards 1866-7, all the States except Western Australia and Tasmania were so affected; in 1875-6 all except Western Australia; in 1884-5 all were affected; in 1889 all except Western Australia and South Australia; in 1891 all except Queensland; whilst in 1893, 1898, and 1902-3, all were affected. The fact that the periods of high death rates have been practically identical in the several States furnishes an indication that the excessive mortality has been due to a considerable extent to some common cause operating throughout the Commonwealth.

It may be noted as curious that periods of heavy mortality have occurred at intervals of approximately nine years, viz.:—1866-7, 1875-6, 1884-5, 1893, and 1902-3. There are, however, two marked increases between the third and fourth dates, and one between the fourth and fifth.

Periods in which the number of deaths was exceptionally low are far less clearly defined than those in which the number was high, and the agreement amongst the States is also less complete. The principal periods of low mortality may be said to be 1861, 1869-71, 1879, 1892, 1897, 1900, 1904-5, 1909, 1914. In 1917 there were marked declines in all the States.

5. **Graphs of Annual Birth, Death, and Marriage Rates and of Rate of Natural Increase—Commonwealth** (page 220).—(i.) *General*. These graphs represent the number of births, deaths, and marriages, and the excess of births over deaths (natural increase) per 1000 of the population of the Commonwealth, for each of the years 1860 to 1917.

(ii.) *Births.* In the case of births, the graph indicates a well marked decline in rate during the period, and represents a fall from 42.56 per 1000 of population in 1860 to 26.51 per 1000 in 1917. This enormous reduction has been subject to small fluctuations during the period under review, but may, on the whole, be said to have been in evidence throughout. There are, however, two periods of arrested decline noticeable, one from 1877 to 1890, and the other from 1898 to the present time. The course of the graph thus indicates a rapid fall from 42.56 in 1860 to 34.99 in 1877, succeeded by a fluctuating but, on the whole, fairly stationary period to 34.98 in 1890, then a fall even more rapid to 27.15 in 1898, and a further comparatively stationary period to 26.51 in 1917. The lowest point reached, viz., 25.29, was attained in 1903, the year in which the Commonwealth suffered severely from the worst drought it has ever experienced. From 1903 to 1912 there was an advance in the rate, followed by a decline to 1917. A declining birth rate is usually due to complex causes, amongst which the variations in the age constitution of the population, and the adoption of preventive measures, are generally considered the most potent. The highest birth rate recorded was 43.27 in 1862.

(iii.) *Deaths.* The three graphs relating to deaths furnish particulars concerning the rates experienced during the period amongst males and females separately, and in the population as a whole, the latter occupying naturally a position between the other two. Throughout the period the rate for males has largely exceeded that for females, but the fluctuations in the two rates have synchronised remarkably, indicating that the conditions which have been responsible for the marked variations which have occurred from time to time have affected males and females alike. On the whole, the graphs furnish clear evidence of a satisfactory decline in the general death rate of the Commonwealth, a fall having taken place from 20.86 in 1860 to 10.66 in 1915. In 1916 there was a slight rise to 11.04, followed in 1917 by a fall to 9.80, the lowest rate yet recorded in the Commonwealth as a whole. The graphical representation of the death rates brings into prominence five years in which the rates were exceptionally high when compared with those of adjacent years. These years are 1860, 1866, 1875, 1884, and 1898. The principal cause of the excessive rate of 1860 was the prevalence in that year of measles, scarlatina, and diphtheria, while the high rates of 1866, 1875, and 1898 were also largely due to epidemics of measles. Prior to 1892, when a rate of 12.91 was experienced, the lowest general death rate for the Commonwealth was that of 1871, viz., 13.24. The highest male death rate for the period was 20.97 in 1860, and the lowest 11.47 in 1917. For females the highest was 20.71 in 1860, and the lowest 8.18 in 1917. The difference between the male and female rate has, since 1869, been fairly constant, and has ranged between 1.97 and 3.44, with a mean value of about 2.7.

(iv.) *Marriages.* In the case of the graph representing marriage rates, the fluctuations are less abrupt than in the case of the birth rate and death rate graphs, and the rate for 1915, 9.14, the highest ever recorded, does not differ very considerably from that of 1860, which was 8.42. The lowest marriage rate for the period was that of 1894, viz., 6.08, marking the culmination of the commercial and financial depression indicated by the declining rates from 1888 onwards. From 1894 to the present time a satisfactory increase has been in evidence, disturbed only by the sharp decline which, in 1903, accompanied the severe drought experienced in the Commonwealth in that year. In 1916 and 1917 the rate declined to 8.21 and 6.87 respectively.

(v.) *Natural Increase.* This graph, which represents the excess of births over deaths per 1000 of population, exhibits marked fluctuations arising from the combined fluctuations in birth and death rates. Thus, corresponding to the high death rates of 1860, 1866, 1875, and 1898, there are exceptionally low rates of natural increase, accentuated in the last-mentioned year by a comparatively low birth rate. A combination of low birth rate and comparatively high death rate was also responsible for a very low rate of natural increase in 1903. The highest rate of natural increase for the period was 26.58 in 1864, and the lowest 13.03 in 1898.

**6. Graphs of Annual Birth Rates—States** (page 221).—These graphs furnish for the several States information similar to that supplied in the graph on page 220 for the Commonwealth as a whole. It will be seen that in every case the total effect has been an extensive decline in rate, subject to very marked fluctuations. In all the States the period from 1875 to 1885 was one of arrested decline, if not of actual advance, in the birth rate. With the exception of the very low rate accompanying the drought in 1903, the variations in any of the States since 1901 have not been very marked, and in most cases a slight tendency to increase is in evidence.

The highest birth rates during the period were as follows:—New South Wales (1864), 44.00; Victoria (1862), 44.71; Queensland (1860), 47.93; South Australia (1862), 45.44; Western Australia (1860), 38.96; and Tasmania (1884), 36.63. The following were the lowest rates for the period:—New South Wales (1903), 25.44; Victoria (1917), 23.50; Queensland (1903), 24.53; South Australia (1903), 23.84; Western Australia (1896), 23.44; Tasmania (1917), 27.03.

**7. Graphs of Annual Death Rates—States** (page 221).—These graphs furnish for the several States similar information to that given for the Commonwealth as a whole in the diagram on page 220, and indicate in each case a satisfactory decline in death rate. It may be noted that an exceptionally high death rate was experienced in all the States in 1875, and that a similar uniformity, though on a smaller scale, is observable for the year 1898, the principal cause in each case having been an epidemic of measles. The highest death rates experienced during the period were as follows:—New South Wales (1867), 19.79; Victoria (1860), 22.77; Queensland (1866), 25.96; South Australia (1875) 19.97; Western Australia (1884), 21.54; and Tasmania (1875), 19.99. The following were the lowest death rates for the period:—New South Wales (1917), 9.60; Victoria (1917), 10.36; Queensland (1906), 9.50; South Australia (1909), 9.74; Western Australia (1917), 8.97; and Tasmania (1917), 8.89.

**8. Graphs shewing Variations in Annual Death Rates from Month to Month.**—The graphs on pages 222 and 223 shew for the Commonwealth as a whole and for each of the six States the annual death rates for males, females, and persons calculated for equalised months, and the infantile death rate, calculated in the same way, and also distinguishing males, females, and persons. Further particulars in regard to these graphs will be found on pages 202 and 203.

## SECTION VI.

## LAND TENURE AND SETTLEMENT.

## § 1. Introduction and Early History.

1. **Introduction.**—A comprehensive description, in a classified form, of the land tenure systems of the several States has been given in preceding issues of this book; see especially Year Book No. 4 (pp. 235 to 333). The details of that description have been necessarily condensed in the present issue, and for more complete information for past years, reference may therefore be made to Year Book No. 4. The historical matter dealing with the development of land legislation in the individual States may be found in Year Book No. 2 (pp. 263 to 272), and in a more condensed form in Year Books No. 3 (pp. 245 to 254), and No. 4 (pp. 235 to 244).

## § 2. Land Legislation in Individual States.

1. **New South Wales.**—(i.) *Acts now in Force.* The Crown Lands Act of 1884 and the supplementary Act of 1889 (now incorporated in the Crown Lands Consolidation Act 1913), were passed chiefly for the purpose of putting an end to speculative selection without *bond fide* intention of settlement. Pastoral leases were required to be surrendered to the Crown and divided into two equal parts, one of which was returned to the lessee under a lease with a fixity of tenure for a term of years, the other half the lessee was allowed to hold under an annual occupation license, but this half was always open for selection.

Nevertheless accumulation of land into large estates continued, and settlement proceeded slowly. Entirely new principles of agrarian legislation have been embodied in Crown Lands Acts passed in the years 1895 to 1917, the Closer Settlement Acts 1904 to 1914, and the Closer Settlement Promotion Act 1910, which offer *bond fide* settlers special inducements by the introduction of new forms of tenure on easy terms and conditions.

(ii.) *The Western Lands Acts.* All Crown lands in the Western Division of New South Wales are now subject to the special provisions of the Western Lands Acts 1901 and 1905. All leases or occupation licenses could be brought within the provisions of the Western Lands Act by application before the 30th June, 1902. Otherwise the leases or licenses were dealt with by the Board as if the Act had not been passed. All leases issued or brought under the provisions of the Western Lands Acts expire on the 30th June, 1943, except in cases where part of the land leased is withdrawn for the purpose of sale by auction, or to provide small holdings, in which case an extension of the term of lease of the remainder may be granted as compensation for the part withdrawn.

2. **Victoria.**—(i.) *Acts now in Force.* The Land Act 1901-1915, deals with the whole system of land occupation and alienation in this State. Closer Settlement was provided for by the Land Acts of 1898 and 1901 and amendments, until the introduction of the Closer Settlement Act 1904, amended in 1906, 1907, 1909, 1910, 1911, and 1912, and now included in the Closer Settlement Act 1915. Other special forms of tenure have been provided for by the Settlement on Lands Act 1893, and the Small Improved Holdings Act 1906; these, however, are now embraced in the Land Acts and Closer Settlement Act respectively.

(ii.) *Mallee Lands.* The lands in the Mallee territory, comprising an area of about 11,000,000 acres in the north-western district of the State, can be cleared at a moderate expenditure. An extension of railway facilities and of successful systems of water supply should bring this territory into greater prominence as a field for agricultural enterprise. More than one-half of this area is unalienated and available for occupation.

3. *Queensland.—Acts now in Force.* The Acts now in force are the Land Acts 1910-1917 and the Closer Settlement Acts 1906-1917. These Acts substitute perpetual leasehold tenures for freeholding tenures in the case of all new selections and auction purchases, but conversion of existing holdings to the leasehold tenure is optional with the selector.

4. *South Australia.—Acts now in Force.* The Crown Lands Acts 1915 repealed and consolidated previous Acts, and also consolidated the Closer Settlement and Village Settlement Acts. The Pastoral Act 1904 controls the pastoral occupation of lands, and the Irrigation and Reclaimed Land Acts of 1914 provide for leases of reclaimed and irrigable lands.

5. *Western Australia.—Acts now in Force.* The Land Act 1898, which consolidated previous legislation as to the management of Crown Lands, has in turn been amended at various times, and, with such amendments, is now in force. The principle of repurchasing Crown lands for the purpose of Closer Settlement was introduced by the Agricultural Lands Purchase Acts 1896 to 1904; these Acts were repealed and consolidated by the Agricultural Lands Purchase Act 1909.

6. *Tasmania.—Acts now in Force.* The law relating to land tenure and settlement is now consolidated in the Crown Lands Act 1911, and in the Closer Settlement Act 1913.

7. *Northern Territory.—*Prior to the transfer of the Northern Territory to the Commonwealth on the 1st January, 1911, the sale and occupation of lands in the Territory were regulated by the Northern Territory Crown Lands Act 1890, the Northern Territory Land Act 1899, and the Northern Territory Tropical Products Act 1904, but from that date the further alienation and occupation of land in the Territory were suspended, pending a complete reorganisation of the system of land settlement by the Commonwealth Government. In December, 1912, an ordinance, cited as the Crown Lands Ordinance 1912, dealing with this question, was made, by which the conditions of land tenure and settlement in the Territory are now determined. Under this ordinance no further alienation of Crown lands is permitted, unless such alienation is in pursuance of existing agreements.

8. *Administration and Classification of Crown Lands.*—In each of the States of the Commonwealth there is now a Lands Department under the direction of a responsible Cabinet Minister, who is charged generally with the administration of the Acts relating to the alienation, occupation, and management of Crown Lands. The administrative functions of most of the Lands Departments are to some extent decentralised by the division of the States into what are usually termed Land Districts, in each of which there is a Lands Office, under the management of a land officer, who deals with applications for selections and other matters generally appertaining to the administration of the Acts within the particular district. In some of the States there is also a Local Land Board or a Commissioner for each district or group of districts. In the Northern Territory the administration of the regulations relating to the occupation and management of Crown lands is in the hands of a Classification Board, consisting of the Director of Lands, the Government Secretary, the Chief Surveyor, and any other officer appointed by the Administrator.

In most of the States, Crown lands are classified according to their situation, the suitability of the soil for particular purposes, and the prevailing climatic and other conditions. The modes of tenure under the Acts, as well as the amount of purchase money

or rent and the conditions as to improvements and residence, may vary in each State according to the classification of the land. The administration of certain special Acts relating to Crown lands has in some cases been placed in the hands of a Board under the general supervision of the Minister; for such purpose, for instance, are constituted the Western Lands Board in New South Wales, the Lands Purchase and Management Board in Victoria, and the Closer Settlement Board in Tasmania.

In each of the States and in the Northern Territory there is also a Mines Department, which is empowered under the several Acts relating to mining to grant leases and licenses of Crown lands for mining and auxiliary purposes. Such leases and licenses are more particularly referred to in a later part of this section. (See § 9.)

Full information respecting lands available for settlement or on any matter connected with the selection of holdings may be obtained from the Commonwealth representative in London, from the Agents-General of the respective States in London, or from the Lands Departments of the various States in the Commonwealth. The administration and classification of Crown lands in each State were more fully dealt with in Year Book No. 2 (pp. 273-6).

### § 3. Tenures under which Crown Lands may be Alienated or Occupied.

**1. Introduction.**—The freehold of Crown lands in the several States of the Commonwealth may now ordinarily be alienated either by free grant (in trust for certain specified purposes), by direct sale and purchase (which may be either by agreement or at auction), or by conditional sale and purchase. Crown lands may be occupied in the several States under a variety of forms of leases and licenses, issued both by the Lands and the Mines Departments.

**2. Classification of Tenures.**—The tabular statement given on pages 251 and 252 shews the several tenures under which Crown lands may be acquired or occupied in each State of the Commonwealth. The forms of tenure are dealt with individually in succeeding parts of this section.

(i.) *Free Grants, Reservations, and Dedications.* The modes of alienation given in this category include all free grants either of the fee simple or of leases of Crown lands. "Free" homesteads in Queensland and Western Australia are not included in this class, these tenures being free in the sense that no purchase money is payable, but not free from residential and improvement conditions. Reservation and dedication, which are ordinarily conditions precedent to the issue of free grants, are also dealt with therein.

(ii.) *Sales by Auction and Special Sales.* This class of tenure includes all methods by which the freehold of Crown lands may be obtained (exclusive of sales under the Closer Settlement and kindred Acts) for cash or by deferred payments, and in which the only condition for the issue of the grant is the payment of the purchase money.

(iii.) *Conditional Purchases.* In this class are included all tenures (except tenures under Closer Settlement and kindred Acts) in which the issue of the grant is governed by the fulfilment of certain conditions (as to residence or improvements) other than, or in addition to, that of the payment of purchase money.

(iv.) *Leases and Licenses.* This class includes all forms of occupation of Crown lands (other than under Closer Settlement and kindred Acts) for a term of years under leases and licenses issued by the Lands Departments. As the terms indicate, the freehold cannot be obtained under these forms of tenure.

### CLASSIFICATION OF TENURES UNDER WHICH CROWN LANDS MAY BE ALIENATED OR OCCUPIED.

NOTE.—*Northern Territory.*—By the Crown Lands Ordinance of 1912, the only form of tenure under which land may be held in the Northern Territory, exclusive of land held under pre-existing rights, is that of leasehold. See § 7 of this section.

(v.) *Closer Settlement Sales, Leases, and Licenses.* In this division are included all forms of tenure provided for under the various *Closer Settlement Acts*, and also under kindred Acts, such as the *Village Settlements* and *Small Holdings Acts*.

(vi.) *Mines Departments' Leases and Licenses.* The tenures specified include all methods in which Crown lands may be occupied for mining and auxiliary purposes under leases and licenses issued by the Mines Department in the several States.

3. **Limitation of Tenures in New South Wales.**—In October, 1910, it was officially stated that it was the policy of the Government to discontinue the granting of the freehold of Crown lands. Under the Crown Lands Act 1912 this policy was partially given effect to by the discontinuance of the disposal of Crown lands by conditional purchase or as homestead selections, and by the institution of several new forms of tenure, viz., homestead farms, suburban holdings, irrigation farms, and Crown leases.

The first three are leases in perpetuity, while the term of a Crown lease is 45 years.

4. **Tenure of Lands by Aliens.**—In the States of New South Wales, Queensland, South Australia and Tasmania restrictions are imposed upon the tenure of lands by aliens (*i.e.*, persons other than natural-born or naturalised British subjects). In Victoria and Western Australia there are no such restrictions. This matter, however, is subject to the war-time regulations of the Commonwealth.

(i.) *New South Wales.* Under the Crown Lands Consolidation Act 1913, an alien is not qualified to apply for an original homestead selection, original conditional purchase lease, settlement lease, original homestead lease, or original conditional purchase, unless he has resided in New South Wales for one year, and at the time of making application lodges a declaration of his intention to become naturalised within five years. If he fails to become naturalised within that period, the land is forfeited. This residential limit of twelve months does not, however, apply to applicants for homestead farms, Crown leases, suburban holdings, and leases within irrigation areas, but any alien who becomes the holder of any of these tenures must become naturalised within three years after his becoming such holder. Failure to comply with this regulation involves forfeiture of such holding, together with all improvements thereon.

(ii.) *Victoria.* Under the Supreme Court Act 1915 (section 3), every alien friend resident in Victoria may acquire, either by grant from the Crown or otherwise, both real and personal property.

(iii.) *Queensland.* Under the Land Act 1910 (section 59b and 62) an alien cannot apply for any land in Queensland unless he obtain a certificate that he is able to read and write from dictation, words in such language as the Minister for Lands may direct. If he acquire a selection he must within five years of such acquisition become a naturalised subject.

(iv.) *South Australia.* In South Australia, Asiatics are disqualified from holding perpetual leases of lands in irrigation areas under Section 19 of the *Irrigation and Reclaimed Lands Act 1914*.

(v.) *Western Australia.* In this State aliens are under no disability as regards the acquisition of the freehold of lands already alienated. Every application to acquire Crown lands, whether by a British subject or an alien, is subject to the approval of the Minister for Lands, with an appeal to the Governor-in-Council.

(vi.) *Tasmania.* Under the Aliens Act 1861 (section 2), aliens cannot hold real estate. An alien, if the subject of a friendly State, may, however, occupy lands for any term not exceeding twenty-one years.

(vii.) *Northern Territory.* No restrictions are imposed upon the tenure of lands by aliens, excepting that under the Mining Act 1903, Asiatic aliens are disqualified from holding gold or mineral leases.

#### § 4. Free Grants, Reservations, and Dedications.

1. **Introduction.**—Although free grants of Crown lands were virtually abolished as far back as 1831, the Land Acts of all the States now contain provisions under which the free alienation or occupation of Crown lands for certain specified purposes—comprising generally charitable, educational, and public purposes—is allowed. In all the States, also, Crown lands may be excepted from sale and reserved to the Crown or dedicated for various public and special purposes. Generally, reservation and dedication are conditions precedent to the issue of a free grant. In addition to reservations of a permanent nature, temporary reservations are also made, but these are, as a rule, subject to considerable fluctuations in area by reason of withdrawals, renotifications, and fresh reservations.

The following table shews the area for which free grants were issued and the areas permanently reserved or dedicated in each State during 1901, and from 1912 to 1916 inclusive:—

#### PARTICULARS OF FREE GRANTS, RESERVATIONS, AND DEDICATIONS, 1901 AND 1912-16.

\* Including both permanent and temporary reservations and dedications.

† Free leases. ‡ Not available. § Exclusive of South Australia. || Including 222 acres reserved for recreation grounds.

2. **New South Wales.**—Crown lands may be reserved or dedicated for certain charitable, educational, and public purposes specified. No promises of dedication for religious purposes were made after the 11th May, 1880, on which date a resolution against any further such grants was passed by the Legislative Assembly. Volunteer Land Office Certificates ceased to be operative after the 31st January, 1912. All cases have now been dealt with.

(i.) **Reservations.** In addition to the reservations referred to above, Crown lands may also be temporarily reserved as sites for cities, towns, or villages, and may be reserved for mining purposes. Crown lands within one mile of any made or projected railway may be temporarily reserved from sale, and any Crown lands may be reserved from sale for the preservation and growth of timber. Further, Crown lands may be reserved by notification in the *Gazette* from being sold or let upon lease or license, in such particular manner as may be specified, or may be reserved from sale or lease generally.

(ii.) *Areas Granted and Reserved, 1916-17.* During the financial year 1916-17, the total area for which free grants were prepared was 2066 acres, including grants of 2063 acres of land resumed under the 12th clause of the Public Roads Act 1902. During the same period 779 acres were dedicated and permanently reserved, the number of separate dedications being 74.

On the 30th June, 1917, the total area temporarily reserved was 25,729,121 acres, of which 6,133,771 acres were for travelling stock, 5,322,406 acres for forest reserves, 1,498,352 acres for water, 1,246,299 acres for mining, and the remainder for temporary commons, railways, recreation and parks, and miscellaneous purposes.

3. **Victoria.**—Under Section 10 of the Land Act 1901, the Governor is authorised to reserve Crown lands, either temporarily or permanently, from sale, lease or license, for any public purpose whatever.

During the year 1916 three free grants, comprising an area of 26 acres, were issued. During the same year reservations of both a permanent and temporary nature, comprising an area of 6482 acres, were made; of this area 222 acres were reserved for recreation grounds.

4. **Queensland.**—Under the Land Act 1910, the Governor-in-Council may grant in trust, or reserve from sale, or lease, temporarily or permanently, any Crown lands required for public purposes.

(i.) *Reservations.* Under Section 2 of the State Forests and National Parks Act 1906, the Governor-in-Council may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(ii.) *Areas Granted and Reserved, 1916.* During the year 1916 there were 2 free grants issued for a total area of 18 acres. During the same period the area reserved was 8251 acres in excess of areas cancelled. The total area reserved up to the end of the year 1916 was 13,548,779 acres.

5. **South Australia.**—Under Section 7 (d) of the Crown Lands Act 1915, the Governor is empowered to dedicate by proclamation any Crown lands for various charitable, educational and public purposes, and may, at any time after dedication, grant the fee simple of such lands to secure the use thereof for the purpose for which they were dedicated.

(i.) *Reservations.* Under Section 7 (f) of the same Act, the Governor may by proclamation reserve any Crown lands (i.) for the use of aborigines, (ii.) for the purposes of military defence, (iii. and iv.) for forest or travelling stock reserves, (v.) for public recreation grounds, (vi.) for railways or tramways, (vii.) for park lands, and (viii.) for any other purpose he may think fit.

(ii.) *Artesian Leases.* Under special circumstances free leases of pastoral lands may be granted to discoverers of artesian wells.

(iii.) *Areas Granted and Reserved, 1916.* During the year 1916 there were 22 free grants issued for a total area of 6556 acres. During the same year 131 reserves, comprising 21,390 acres, were proclaimed.

6. **Western Australia.**—Under Section 39 of the Land Act 1898, as amended by Section 27 of the Act of 1906, the Governor may reserve any Crown lands which may be required for religious, charitable, or public purposes. These reservations may be either temporary or permanent.

During the year 1916, 1 free grant containing 1 acre was issued, while the area reserved was 157,601 acres.

7. **Tasmania.**—Under Section 11 of the Crown Lands Act 1911, the Governor may reserve any Crown lands for the purposes therein specified. The lands are ordinarily leased for a period of ninety-nine years at a peppercorn rental.

During the year ending 31st December, 1916, there were 5 free leases, comprising an area of 17 acres, issued. During the same period 242 acres were reserved, 116 acres being reserved for stock-resting purposes, 5 acres for cemetery purposes, 120 acres for recreation grounds, and 1 acre for other municipal purposes. The total area permanently reserved to the end of the year 1916 was 1,112,026 acres.

### § 5. Sales by Auction and Special Sales.

1. **Introduction.**—In all the States, sales by auction of Crown lands are held from time to time. Notifications of such sales are given in the *Government Gazettes*, together with particulars as to the upset price and conditions of sale. Excepting in the case of South Australia, where land is sold at auction for cash only, the purchase may be either for cash or on credit by deferred payments. In most of the States land may also be purchased by private contract at the upset price, when it has been offered at auction and not sold. In the case of auction sales on credit in the States of Western Australia and Tasmania, certain improvement conditions are imposed, and such sales are therefore classed for the purposes of this article among *Conditional Purchases*. (See § 6.) In most of the States comparatively small areas of Crown lands may be sold without competition under special circumstances. Sales by auction and special sales under Closer Settlement Acts are referred to in a later part of this section. (See § 8.)

2. **New South Wales.**—Under the Crown Lands Act, lands not exceeding in the aggregate 200,000 acres for the whole State may be sold by auction during any one year. The sales are notified in the *Gazette* not less than one month before the day of sale. The upset prices may not be less than £8 an acre for town lands; £2 10s. for suburban lands; and other lands fifteen shillings. Town lands may not be sold in areas exceeding half-an-acre; suburban lands in areas exceeding twenty acres; and country lands in areas exceeding 640 acres. A deposit of 25 per cent. on the purchase money must be paid at the sale, and the balance in ordinary circumstances within three months. In the case of town or suburban lands, or portions of less than 40 acres, the Minister may submit the land to sale on deferred payments, in which case the balance is spread over a fixed period (not exceeding 5 years) and is payable in annual instalments with 5 per cent. interest.

A fuller description of the conditions under which land may be purchased at auction may be found in the previous issues of the Year Book. (See Year Book No. 5, p. 273.)

*Alienation by Auction and Special Sales.* During the year ended the 30th June, 1917, the area of Crown lands sold by auction and special sales for which grants were prepared amounted to 2513 acres, of which 744 acres were sold by auction in 347 lots; 488 acres were sold by after-auction sales in 277 lots; 45 acres were sold as improvement purchases in 108 lots; and 1236 acres were sold as special purchases in 126 lots. The following table gives particulars of Crown lands alienated by auction and special sales during 1901 and for each year from 1912 to 1917 :—

NEW SOUTH WALES—AUCTION AND SPECIAL SALES, 1901 and 1912-17.

Year.	Auction and After-auction Sales.	Improvement Purchases.	Special Sales.	Total.	
				Area.	Price.
	Acres.	Acres.	Acres.	Acres.	£
1901* ...	49,074	43	445	49,562	116,562
1912 ...	4,530†	32	2,063	6,625	77,274
1913 ...	3,764†	53	2,739	6,556	58,552

1915 ...	501†	49	1,897	2,447	36,411
1916 ...	492	66	2,707	3,265	35,614
1917 ...	900	39	1,120	2,059	39,967

\* Year ended 31st December. Subsequent years to 30th June. † Exclusive of frontages sold under the Centennial Park Sale Act.

Particulars of total areas alienated are given hereafter. (See § 11.)

3. **Victoria.**—Lands specially classed for sale by auction, and any land in any city, town, or borough, may be sold by auction in fee simple, not exceeding 100,000 acres in any one year, at an upset price of £1 an acre, or at any higher price determined. The purchaser must pay the survey charge at the time of the sale, together with a deposit of  $12\frac{1}{2}$  per cent. of the whole price; the residue is payable in equal half-yearly instalments, not exceeding forty in number, according to the amount, with interest at the rate of 4 per cent. per annum.

(i.) *Special Sales without Competition.* Detached strips of land not exceeding twenty acres may be sold at a valuation to the owner of the adjoining freehold in cases somewhat similar to those specified above in respect to Crown lands in New South Wales.

(ii.) *Areas Sold at Auction and by Special Sales.* The following table gives particulars of auction sales and special sales for the year 1901 and from 1912 to 1916:—

**VICTORIA—AUCTION AND SPECIAL SALES, 1901 and 1912-16.**

Particulars.	1901.	1912.	1913.	1914.	1915.	1916.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Country lands ... ..	4,079	1,178	1,196	983	818	625
Town and suburban lands ... ..	2,127	1,412	1,278	1,273	1,276	622
Special sales ... ..	846	1,530	1,731	1,449	1,193	814
Total ... ..	7,052	4,120	4,205	3,705	3,287	2,061

Particulars of total areas alienated are given hereafter. (See § 11.)

4. **Queensland.**—Up to 31st December, 1916, the Minister might, with the approval of the Governor-in-Council, cause any Crown lands to be offered for sale by auction. Town or suburban lands might be under either freeholding or perpetual lease tenure. The notification must specify the amount of deposit, and the term for payment of the balance of the money, which term might not exceed ten years. The upset price might not be less than £8 per acre for town lands, £2 per acre for suburban lands, and 10s. per acre for country lands. Since the close of the year 1916, the perpetual lease tenure only is available.

(i.) *After-auction Sales.* The notification of lands for sale by auction might declare that any lands therein mentioned, which had been offered at auction, but not sold or withdrawn, should be open to purchase at the upset price by the first applicant. The price might be paid in the same instalments and at the same periods as if the land had been bought at the auction.

(ii.) *Special Sales without Competition.* Land might be sold without competition to the holder or holders of adjoining lands at a price to be determined by the Land Court, under circumstances similar to those specified above in the case of New South Wales. When the holder of any land proved that, owing to danger from floods or other reasons, it was unsafe to reside on his holding, he might be granted, on payment of a price determined by the Land Court, an area not exceeding ten acres out of the nearest convenient and available Crown lands. Perpetual leasehold is now an alternative tenure.

(iii.) *Areas Sold at Auction, after Auction, and by Special Sales.* The following table shews the areas sold at or after auction, and by special sales, during the year 1901 and from 1912 to 1916:—

**QUEENSLAND.—AUCTION AND SPECIAL SALES, 1901 and 1912-16.**  
(FREEHOLDING TENURES.)

Particulars.				1901.	1912.	1913.	1914.	1915.	1916.
				Acres.	Acres.	Acres	Acres.	Acres.	Acres.

Special sales	...	...	...	55	200	835	87	79	108
Total	...	...	...	53,314	6,594	10,954	6,716	3,392	108

Particulars of total areas alienated are given hereafter. (See § 11.)

During 1916, there were in Queensland auction sales, under perpetual lease, of 296 acres for town areas and 1276 acres for suburban areas, a total of 1572 acres.

(iv.) *Unconditional Selections.* This form of tenure is similar to that of a sale by auction with deferred payment. The minimum price for the land is 13s. 4d. an acre, payable in twenty annual instalments, and the maximum area granted to the applicant is 1280 acres. A deed of grant may be obtained upon payment of the purchase money.

The following table shews the number and area of unconditional selections for which applications were accepted during the year 1901 and from 1912 to 1916:—

**QUEENSLAND.—UNCONDITIONAL SELECTIONS, 1901 and 1912-1916.**

Particulars.				1901.	1912.	1913.	1914.	1915.	1916.
Number	...	...	...	151	51	41	48	35	8
Area	...	...	Acres	24,322	14,578	6,603	12,081	5,639	3,035
Rent	...	...	£	1,180	565	266	448	213	103

5. *South Australia.*—The following lands may be sold by auction for cash:—(a) Special blocks. Any single section of Crown lands which may be surrounded by lands sold or contracted to be sold, and any section (not exceeding 100 acres in area) which may be required for the establishment of any industry. (b) Crown lands which have been offered for perpetual lease, and not taken up for two years. (c) Town lands. (d) Suburban lands. The upset price is determined by the Commissioner, and 20 per cent. of the purchase money must be deposited at the time of sale, and the residue paid within such a time as the Commissioner may allow.

(i.) *After-auction Sales.* All Crown lands except town or suburban lands offered at auction and not sold remain open for leasing or sale under agreement, or may be sold by private contract for cash at the upset price.

(ii.) *Sales for Special Purposes.* The Governor may, on the application of the purchaser or lessee under any of the Crown Lands Acts, grant two acres of the land comprised in such agreement or lease to trustees, to be used for any public or charitable purposes, or he may grant not over one acre of land, comprised in such agreement, as a site for a shop, mill, or post office. The purchase money for such land must be paid at the time of application.

(iii.) *Areas Sold for Cash.* The following table shews the areas sold for cash during the year 1901 and from 1912 to 1916. The total areas sold under all types of sale are shewn in a later part of this section. (See § 11.)

## SOUTH AUSTRALIA—AUCTION AND SPECIAL SALES, 1901 and 1912-1916.

Year ... ..	1901.	1912.	1913.	1914.	1915.	1916.
Area in acres ... ..	11,814	277,665	106,432	51,248	29,081	30,799

6. **Western Australia.**—Surveyed town lots notified in the *Gazette* as open for sale, were sold by public auction at a prescribed upset price up to 18th October, 1911, since which date, however, all town lands have been withdrawn from sale and are now granted under lease only. In the case of suburban lands, the purchaser must carry out certain improvements, which are more particularly referred to later. (See § 6, *Conditional Purchases*.)

*Areas Sold by Auction.* The following table shews the areas of town and suburban lands sold at auction during the year 1901 and from 1912 to 1917 :—

## WESTERN AUSTRALIA—AUCTION SALES, 1901 and 1912-1917.

Year ... ..	1901.	1912. <sup>1</sup>	1913. <sup>1</sup>	1914. <sup>1</sup>	1915. <sup>1</sup>	1916. <sup>1</sup>	1917. <sup>1</sup>
Area sold ... Acres	856	1,359	1,087	890	1,396	419	543
Number of Allotments	1,366	705	530	263	353	102	144

1. For the year ended 30th June.

Particulars as to total areas alienated are given in a later part of this section. (See § 11.)

7. **Tasmania.**—Any town lands may be sold at auction or by private contract, either for cash or on credit, provided that no such lands may be sold on credit if the price is less than £15. Rural lands may also be sold at auction or by private contract, but lots of first-class land may not be sold on credit if less than fifteen acres in area. In the case of sales on credit both of town and rural lands, improvement conditions are imposed, and such sales are therefore classified for the purposes of this article as *Conditional Purchases*. (See § 6.)

(i.) *After-auction Sales.* All rural lands and town lands, not within five miles of any city, which have been offered at auction and not sold, may be purchased by private contract at the upset price, and subject to the conditions on which they were offered at auction.

(ii.) *Sale of Land in Mining Towns.* The holder of a residence or business license, who is in occupation and is the owner of buildings and improvements upon the area licensed of a value equal to the upset price of such area, is entitled to purchase not more than half an acre in area. The areas may be sold on credit.

(iii.) *Areas Sold for Cash.* The following table shews the areas sold for cash during the year 1901 and from 1912 to 1916 :—

## TASMANIA—AUCTION AND SPECIAL SALES, 1901 and 1912-1916.

Year ... ..	1901.	1912.	1913.	1914.	1915.	1916.
Area in acres ... ..	1,915	2,026	383	2,260	339	170

Particulars of total areas alienated are given in a later part of this section. (See § 11.)

## § 6. Conditional Purchases.

1. **Introduction.**—In all the States of the Commonwealth<sup>1</sup> the freehold of the land may be acquired under what are known as systems of conditional purchase by deferred payments of half-yearly or yearly instalments. Certain conditions, generally as to residence and improvements, have to be complied with before the freehold is granted, but these conditions are usually of a light nature and are inserted chiefly with the object of guaranteeing that the occupier will become of benefit to the community by making a reasonable effort to render his holding wealth-producing. Though there is a considerable similarity between some of the forms of tenure in the several States, the terms and conditions vary greatly in detail. As a rule a lease or license for a certain period is first issued to the selector, and upon fulfilment of the prescribed conditions and payment of the full amount of purchase-money the freehold is conveyed to him. In Queensland<sup>2</sup> and Western Australia "free" homesteads may be acquired. Although under these tenures no purchase-money is payable, the grant is conditional on the performance of residential and improvement conditions; these tenures are therefore included here with conditional purchases rather than with free grants.

2. **New South Wales.**—The following are the methods by which land may be alienated by conditional purchase:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conversion of certain holdings into conditional purchase; and (iv.) homestead selections.

A description of the conditions under which land may be taken up under this form of tenure is given in previous issues of the Year Book. (See No. 6, p. 277.)

During the year ended the 30th June, 1917, deeds of grant were prepared on the completion of conditional purchases for 357,828 acres, making the total number of conditional purchases in existence at the end of the financial year 88,498 for a total area of 18,693,915 acres. The following table gives particulars of conditional purchases in 1901 and from 1912 to 1917 :—

**NEW SOUTH WALES.—CONDITIONAL PURCHASES, 1901 and 1912 to 1917.**

Year.	Applications Made.		Applications Confirmed.		Areas for which Deeds have been Issued.	
	Number.	Area.	Number.	Area.	During the Year. <sup>2</sup>	To end of Year.
		Acres.		Acres.	Acres.	Acres.
1901	2,277	549,898	1,555	360,910	500,554	4,212,189
1912 <sup>1</sup>	1,258	190,969	1,099	175,004	671,564	15,232,355
1913 <sup>1</sup>	783	103,844	839	105,167	406,019	15,638,374
1914 <sup>1</sup>	512	65,306	554	67,534	322,556	15,960,930
1915 <sup>1</sup>	362	47,175	287	35,249	304,012	16,264,942
1916 <sup>1</sup>	216	22,495	183	23,552	307,016	16,571,958
1917 <sup>1</sup>	168	25,761	108	13,025	357,828	16,929,786

1. Year ended 30th June. 2. Exclusive of exchanges under the Crown Lands Act 1895.

Further particulars as to the total areas alienated and in process of alienation are given hereinafter. (See § 11.)

During the year ended 30th June, 1917, there were 2 original and 35 additional homestead selections applied for, comprising an area of 3970 acres. During the same period the total number of applications confirmed was 5, comprising 1337 acres, and 3585 homestead selections and grants, comprising an area of 1,256,036 acres, were in existence on the 30th June, 1917. This tenure is now practically superseded by the Homestead Farm tenure. Further particulars for previous years are given in a later part of this section. (See § 11.)

1. Except Queensland since 1916. 2. Prior to 1st January, 1917.

3. **Victoria.**—The freehold of agricultural and grazing lands may be acquired by conditional purchase under the following tenures:—(i.) Agricultural, grazing and selection purchase allotments; (ii.) agricultural and grazing allotments by selection from grazing area or perpetual leases; (iii.) Mallee selection purchase leases; (iv.) Murray settlements leases; and (v.) swamp or reclaimed lands purchase leases.

A description of the conditions under which land may be taken up under this form of tenure may be found in previous issues of the Year Book. (See No. 6, p. 278.)

With reference to Murray settlement leases, two settlement areas have been laid out under the Act with due regard to irrigation conditions, viz., those at White Cliffs and Nyah, and at the former place a dry farm area has also been subdivided. At White Cliffs 6273 acres were subdivided as homestead allotments, and 50,345 acres as dry farm allotments, while at Nyah 1960 acres were subdivided as homestead allotments. No additional subdivision has been made during 1916.

The subjoined table gives particulars shewing the areas selected conditionally during the year 1901 and from 1912 to 1916. A large proportion of the areas shewn has reverted to the Crown in consequence of non-fulfilment of conditions.

**VICTORIA.—AREAS PURCHASED CONDITIONALLY, 1901 and 1912 to 1916.**  
(EXCLUSIVE OF SELECTION IN THE MALLEE COUNTRY.)

No. of selectors	...	...	2,979	1,072	1,548	1,307	883	902

Particulars as to total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

4. **Queensland.**—The several types of selection under which the freehold might, prior to 1917, have been acquired by conditional purchase are as follows:—(i.) Agricultural farms; (ii.) agricultural homesteads; (iii.) prickly pear selections; and (iv.) free homesteads.

In previous issues of this book may be found the conditions under which land might be selected under this form of tenure. (See No. 6, p. 280.)

Since the close of the year 1916, no selections can be acquired on a freeholding basis, but existing selections are not affected, though they may be converted to perpetual leases if the selectors so desire.

*Number and Area of Conditional Purchases.* The following table shews the number and area of conditional purchases for which applications were accepted in 1901 and from 1912 to 1916:—

**QUEENSLAND.—CONDITIONAL PURCHASES (APPLICATIONS ACCEPTED),**  
1901 AND 1912 TO 1916.

Year.		Agricultural Farms.		Agricultural Homesteads.		Prickly Pear Selections.		Total.	
		Number.	Area.	Number.	Area.	Number.	Area.	Number.	Area.
			Acres.		Acres.		Acres.		Acres.
1901	...	661	160,804	669	155,512	19	48,450	1,349	364,766
1912	...	1,717	614,269	18	3,771	544	628,614	2,279	1,246,654
1913	...	1,477	527,461	24	3,934	548	546,749	2,049	1,078,144
1914	...	1,554	538,844	25	5,927	536	683,000	2,215	1,227,771
1915	...	978	300,302	12	1,913	451	481,258	1,441	783,473
1916	...	399	120,207	5	1,337	203	180,921	607	302,465

During the year 1916, applications were accepted to select agricultural farms to the number of 399 for 120,207 acres, an average area of 301 acres, at an average price of 16s. 10d. per acre. The number of selections and the total area selected are less than the corresponding figures for the previous year by 579 and 180,095 acres respectively. The average area is less by 6 acres, and the average price per acre is 1s. less.

The average area of agricultural homesteads was 267 acres. The average price of the land selected as prickly pear selections during the year was 4s. 7d. per acre, an increase on the previous year of 1s. 10d. per acre.

During the year 1916 no land was opened for selection as free homesteads.

Particulars as to total areas alienated and in process of alienation may be found hereinafter. (See § 11.)

5: **South Australia.**—The types of conditional purchases under which land may be alienated in this State are as follows :—(i.) Agreement to purchase, and (ii.) Agreement under the Pinnaroo Railway Act 1903.

(i.) *Agreement to Purchase.*—Surveyed Crown lands are available for agreement to purchase, as well as for perpetual lease under the Crown Lands Acts of 1915, the purchase money being fixed by the Land Board, and payable in sixty half-yearly payments, including interest at not less than 2 per cent. per annum. The condition as to payment of instalments for land offered under the provisions of Act of 1915 in newly surveyed mallee lands is that no payment is made for the first four years, from the fifth to end of the tenth year, interest only at the rate of 2 per cent. per annum on value of land is payable, the first instalment of purchase money, including interest at the rate of 4 per cent. per annum, being payable at the commencement of the eleventh year. All payments are made in advance, the term of agreement being thereby extended to forty years. If the conditions relating to fencing, vermin destruction, and in some cases to residence, are fulfilled, the purchase may be completed after a term of six years from commencement of the agreement on payment of all principal and interest due. All minerals are reserved to the Crown, and the Crown may resume any part of the land for the purposes of roads, water conservation, mining, etc., compensation being payable to the purchaser for loss occasioned by resumption.

(ii.) *Pinnaroo Railway Lands.* Under the Pinnaroo Railway Act 1903 provision was made for opening up about 1,500,000 acres of good agricultural country in the vicinity of a line from Pinnaroo, adjoining the Victorian border, to Tailem Bend, a distance of eighty-seven miles. These lands are now offered on agreement with covenant to purchase or on perpetual lease under the Crown Lands Act 1915. The railway has been paid for from the proceeds of the land already selected. The conditions of purchase are similar to those stated in par. (i.) above.

The total area held on 30th June, 1917, was 1,096,460 acres; of this area purchase has been completed of 463,699 acres, and 16,179 acres are held on perpetual and right of purchase leases, allotted before the Pinnaroo Railway Act was passed.

(iii.) *Particulars of Conditional Purchases.* The subjoined table gives particulars of the areas alienated by conditional purchase, on fulfilment of the conditions, at the end of 1901 and from 1912 to 1916 :—

**SOUTH AUSTRALIA.—AREAS ALIENATED UNDER AGREEMENTS TO PURCHASE,  
1901 AND 1912 TO 1916.**

Particulars as to the total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

**6. Western Australia.**—The various types of selection under which the freehold can be alienated by conditional purchase in this State are as follows:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conditional purchase by direct payment; (iv.) conditional purchase of blocks for vineyards, orchards, or gardens; (v.) conditional purchase of grazing lands; and (vi.) free homestead farms.

A full description of the various conditions under which land may be held under this form of tenure may be found in the previous issues of the Year Book. (See Year Book No. 5, pp. 283 and 284.) The following table shews the area of the selections for which grants were issued, the prescribed conditions having been fulfilled, during the year 1901 and from 1912 to 1917.

1. Including selections and sales on credit.

Particulars of total areas alienated and in process of alienation are given hereinafter. (See § 11.)

## § 7. Leases and Licenses.

1. **Introduction.**—Leases and licenses are issued in all the States and in the Northern Territory for various terms and upon various conditions. In Victoria, Queensland, South Australia, and the Northern Territory perpetual leases are issued for an indefinitely long period upon payment of an annual rent, while in all the States leases or licenses of comparatively large areas may be obtained for pastoral purposes. Provision has also been made in all the States for convenient forms of leases and licenses for various special purposes, and also for special classes of lands. The leases and licenses dealt with below are exclusive of those issued under Closer Settlement and kindred Acts, and also of those issued for mining and auxiliary purposes. (See §§ 8 and 9.)

2. **New South Wales.**—The following are the various types of leases and licenses issued in this State:—(i.) Conditional leases; (ii.) conditional purchase leases; (iii.) settlement leases; (iv.) improvement leases; (v.) annual leases; (vi.) residential leases; (vii.) special leases; (viii.) snow leases; (ix.) pastoral leases; (x.) scrub leases; (xi.) inferior lands leases; (xii.) occupation licenses; (xiii.) Western lands leases; (xiv.) homestead farm leases; (xv.) suburban holdings leases; (xvi.) Crown leases; (xvii.) irrigation farm leases; (xviii.) week-end leases; (xix.) leases of town lands; (xx.) returned soldiers' special holdings.

A description in detail of the conditions which govern the issue of these various leases and licenses may be found in previous editions of the Year Book. (See Year Book No. 6, p. 285.)

On the 30th June, 1917, there were 58,013 leases and licenses current under the Lands Department and the Western Land Board, comprising 117,015,359 acres of Crown lands. Of these leases there were 54,975, comprising 41,461,163 acres, in the Eastern and Central Divisions; and 3058, comprising 75,554,196 acres, in the Western Division.

The following table shews the areas held under various descriptions of leases and licenses at the end of the year 1901, and at the end of 1913-14 and following financial years, and also the area and rental of leases current on the 30th June, 1917 :—

\* Includes Permissive Occupancy.

† Permissive Occupancies in the Western Division not included.

The total annual rent derived from the leases and licenses issued by the Lands Department and the Western Lands Board amounted to £523,961, or an average of 1.07 pence per acre. Particulars regarding leases and licenses issued by the Mines Department are given in a later part of this section. (See § 9, *Occupation of Crown Lands for Mining Purposes*.)

3. *Victoria*.—The various types of leases and licenses (exclusive of Closer Settlement and Mines Department leases and licenses) which may be issued in this State are as follows:—(i.) Grazing area leases; (ii.) selection purchase leases; (iii.) perpetual leases; (iv.) Mallee perpetual leases; (v.) licenses of auriferous lands; (vi.) swamp or reclaimed lands leases; (vii.) grazing licenses; (viii.) leases and licenses for other than pastoral purposes; and (ix.) State forests and timber reserves licenses.

A description in detail of the conditions which govern the issue of these various leases and licenses may be found in the previous issues of the Year Book. (See Year Book No. 5, pp. 291-2.)

*Areas held under Leases and Licenses.* The following statement shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901, and from 1912 to 1916 :—

4. **Queensland.**—In this State Crown lands may be occupied under the following types of leases and licenses:—(i.) Grazing homesteads; (ii.) grazing farms; (iii.) occupation licenses; (iv.) special leases; (v.) perpetual lease selections; and (vi.) pastoral leases. An applicant for a grazing homestead or grazing farm may not hold more than 60,000 acres, and the term of the lease may not exceed 28 years.

(i.) *Grazing Homesteads.* As at 31st December, 1916, lands opened for grazing selections were available for fifty-six days as grazing homesteads only. Personal residence was necessary for the first five years, and prior to the expiration of such period or the earlier death of the lessee, a grazing homestead could be assigned or transferred. Without the special permission of the Minister it could not be mortgaged during the five years except to the Agricultural Bank; thereafter the lease was subject to the condition of occupation. Since 1st January, 1917, grazing homesteads are subject to personal residence by the selector during the whole term of the lease, but the restrictions on assignment or transfer still operate only during the first five years.

(ii.) *Grazing Farms.* In order to obtain priority of claim the applicant may tender an annual rent higher than the notified one, for the first seven years. As soon as the land is fenced the selector becomes entitled to a lease, and may thereafter mortgage the same. The lease is subject to the condition of occupation during the whole term. The Crown may resume the whole or part of the lease.

Particulars of grazing farms and grazing homesteads are given in the following paragraph:—

(iii.) *Grazing Farms, Homestead and Scrub Selections.* The following table shews the number of grazing farms, grazing homesteads, and scrub selections, for which applications were accepted in 1901 and from 1912 to 1916:—

**QUEENSLAND.—GRAZING FARMS, HOMESTEAD AND SCRUB SELECTIONS,  
1901 AND 1912-16.**

Year.	Grazing Farms.		Grazing Homesteads		Scrub Selections.		Total.	
	No.	Area.	No.	Area.	No.	Area.	No.	Area.
		Acres.		Acres.		Acres.		Acres.
1901 ...	247	1,371,283	47	290,785	19	48,450	313	1,710,518
1912 ...	223	1,834,920	348	3,860,887	...	...	571	5,695,807
1913 ...	230	2,681,948	317	3,698,600	...	...	547	6,380,548
1914 ...	272	3,380,918	288	3,462,488	...	...	560	6,843,406
1915 ...	222	2,461,836	275	3,984,517	...	...	497	6,446,353
1916 ...	112	1,412,652	247	3,065,096	...	...	359	4,477,748

The average rent in 1916 was .74d. per acre for grazing farms and 1.28d. per acre for grazing homesteads.

Particulars of total areas held under leases and licenses are given in a later part of this section. (See § 11.)

(iv.) *Occupation Licenses.* Annual licenses are granted to occupy Crown lands which have been declared open for such occupation by notification in the *Gazette*. The rent is as specified by the notification or as bid by the licensee, but the Minister may by notice before the 1st September in any year increase the rent. The total number of licenses in force at the end of the year 1916 was 2456, comprising an area of 69,718 square miles, the total rent being £54,659. Particulars of the area held under license for previous years are given in a later part of this section. (See § 11.)

(v.) *Special Leases.* Leases of any portion of Crown land may be issued for a term not exceeding thirty years to any person for any manufacturing, industrial, business or recreation purposes. Leases for a similar term may be issued for any country lands reserved for public purposes and which are infested with noxious weeds.

During the year 1916 there were 121 leases for special purposes granted, comprising an area of 2795 acres, the total annual rent being £400, and there were extant at the end of the year 733 such leases, reserving rents amounting to £3829 per annum. In addition, 44 leases of reserves, aggregating 20,183 acres, were granted at rentals amounting to £259 per annum; the total number of these leases of reserves in force at the end of the year being 291, reserving rents amounting to £1263. Particulars of special leases for previous years are given in a later part of this section. (See § 11.)

(vi.) *Perpetual Lease Selections.* Up to 31st December, 1916, land proclaimed to be open for agricultural farm selection (see § 6, 4) might also be opened for perpetual lease selection, and the latter mode might be conceded priority of application over the former. The rent for the first period of ten years of the lease was  $1\frac{1}{2}$  per cent. on the proclaimed purchase price of the land for agricultural farm selection. The rent for each succeeding period of ten years was determined by the Land Court. Similar conditions of occupation and improvement as were prescribed for agricultural farms were attached to perpetual lease selections. From 1st January, 1917, land opened for agricultural selection may be opened only for perpetual lease selection, and land opened for prickly pear selection may be opened only for perpetual lease prickly pear selection. The rent for the first period of 15 years is  $1\frac{1}{2}$  per cent. of the notified capital value of the land, and for each succeeding period of 15 years may be determined by the Land Court. The conditions of selection are similar to those for the previous tenures of agricultural farms and prickly pear selections.

#### QUEENSLAND.—PERPETUAL LEASE SELECTIONS, 1912 to 1916.

Particulars.			1912.	1913.	1914.	1915.	1916.
Number	...	...	20	12	18	175	294
Area	...	Acres	19,226	10,887	12,991	59,760	114,011
Rent	...	£	212	106	153	973	1,806

(vii.) *Special Licenses.* Licenses to cut timber or to dig for any stone, gravel, earth, shells, or guano, may be issued.

(viii.) *Pastoral Leases.* Up to 31st December, 1916, existing pastoral leases were deemed to be held under the Land Act 1910. Lands open for pastoral lease might be leased for a period not exceeding thirty years. The annual rent, per square mile, for the first ten years must be as notified in the *Gazette*, or in case of competition, bid at auction. If the value of the holding became enhanced by the development of public

works in the neighbourhood, or by the occurrence of minerals on or near the holding, the rent might be redetermined. A new pastoral tenure, as from 1st January, 1917, was introduced by the amending Act of 1916, viz., preferential pastoral lease. Holdings under this tenure are confined to persons with no interests or limited interests in pastoral leases, and priority of application may be obtained by an applicant undertaking to reside on the holding personally during the first seven years.

The following table shews the total areas of pastoral leases occupied under the various Acts at the end of the year 1901 and from 1912 to 1916 inclusive:—

**\* QUEENSLAND.—PASTORAL LEASES OCCUPIED UNDER VARIOUS ACTS,  
1901 AND 1912 TO 1916.**

<b>Total ... ..</b>	<b>348,015</b>	<b>354,843</b>	<b>357,615</b>	<b>353,312</b>	<b>349,838</b>	<b>337,423</b>

\* Up to the year 1910, resumed parts of pastoral holdings were included in these figures, but since that year they are held under occupation license, and are included in the figures under that head.

The gross area held at the end of the year 1916 for purely pastoral purposes (under *Occupation Licenses and Pastoral Leases*) was 407,141 square miles, at rentals aggregating £338,255 per annum. The area was 13,961 square miles less than that for the previous year, and the rental was £9501 less. The average rent was 16s. 7½d. per square mile, as against 16s. 6½d. for the previous year.

**5. South Australia.**—The following are the various types of leases and licenses which are issued in this State:—(i.) Perpetual leases; (ii.) miscellaneous leases; (iii.) miscellaneous grazing and cultivation leases; (iv.) irrigation and reclaimed swamp leases; (v.) licenses for special purposes; (vi.) leases under the Pastoral Act 1904; and (vii.) leases with right of purchase.

(i.) *Perpetual Leases.* Surveyed Crown lands are available for perpetual leases as well as for agreements to purchase under Crown Lands Acts of 1915. Under the Crown Lands Act of 1888 perpetual leases were granted in perpetuity, and the rent determined for each period of fourteen years, at least twelve months before the expiration of each such period. Under the Crown Lands Act of 1893 the revaluation section was repealed and the rent was fixed in perpetuity, generally at rates varying from 2 per cent. to 4 per cent. per annum on the value of the land as fixed by the Land Board. The condition as to payment of rent of land offered under provisions of the Act of 1915 in newly surveyed mallee lands is that no rent is charged for the first four years, and from the fifth to the end of the tenth year payment is made at the rate of 2 per cent. per annum, the full rate at 4 per cent. becoming due at the commencement of the eleventh year. All minerals are reserved to the Crown, and the Crown may reserve any part of the land for the purposes of roads, water conservation, mining, etc., compensation being payable to the lessee for loss occasioned by resumption.

The conditions under which the other leases and licenses are issued will be found in detail in the previous issues of the Year Book. (See Year Book No. 5, pp. 294 and 295.)

(ii.) *Area held under Lease.* The following table shews the area held under leases and licenses at the end of the year 1901, and from 1912 to 1916:—

**SOUTH AUSTRALIA.—AREA UNDER LEASES AND LICENSES, 1901 and 1912 to 1916.**

Particulars.	1901.	1912.	1913	1914	1915.	1916.

\* For financial year ended the 30th June. † No timber leases granted since 1903.

‡ Timber Leases and Permits are now under the control of the Mines Department.

Particulars as to the total area occupied under leases and licenses are given in a later part of this section. (See § 11.)

7. *Tasmania.*—The several forms of leases and licenses in this State are as follows:—(i.) Grazing leases; (ii.) miscellaneous leases; (iii.) timber licenses; (iv.) occupation licenses; (v.) temporary licenses; and (vi.) timber leases.

The conditions which govern the issue of these leases and licenses are more fully dealt with in the previous issues of the Year Book. (See Year Book No. 5, p. 297.)

*Area held under Leases and Licenses.* The following table shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901 and from 1912 to 1916:—

**TASMANIA.—LEASES AND LICENSES ISSUED, 1901 AND 1912-16.**

8. **Northern Territory.**—The system of land settlement in the Northern Territory has been reorganised by the Commonwealth Government. A New Lands Ordinance was passed in December, 1912, known as the Crown Lands Ordinance 1912, and future disposal of land in the Territory will be made in accordance with this Ordinance, which provides for a leasehold system only, and no further alienation of Crown lands will be permitted, unless such alienation is in pursuance of existing agreements. Under this Ordinance, the classification and control of Crown lands is in the hands of a Board, consisting of the Director of Lands, the Director of Agriculture, and the Chief Surveyor. The classified land is leased in blocks, the maximum area ranging from 300 square miles of first-class pastoral to 1280 acres of first-class agricultural land. Before offering any land for leasing, the Board fixes the annual rental, but every lease is subject to reappraisal of rent at specified periods, viz., every fourteen years in the case of town lands, and every twenty-one years in the case of agricultural and pastoral lands.

Leases under this Ordinance are in perpetuity, except as regards pastoral and miscellaneous leases, the term of which is 21 or 42 years, according to the quality of the land leased.

The lessee must reside on the land leased for a certain period every year, must fence, stock, and cultivate it to the extent prescribed, and must, within two years of the commencement of the lease, establish a home on it. In order to promote settlement in the Territory, the first five thousand blocks of agricultural land taken up on perpetual lease under this ordinance will be rent free during the life of the applicant, or for 21 years from the commencement of the lease, whichever period is longer. By an amending ordinance of 1913, additional powers are given to the Administrator in revoking and granting leases.

The various types of leases, licenses, and permits current are as follows:—(i.) Agricultural leases; (ii.) pastoral leases; (iii.) special leases; (iv.) leases with right of purchase; (v.) tropical products leases; (vi.) leases for horsebreeding stations; (vii.) licenses; and (viii.) pastoral and other permits. (See § 2, 7). The permit system was discontinued at the end of 1911.

*Area held under Lease, License, and Permit.* The following table shews the total area held under lease, license, and permit at the end of the years 1901 and 1912 to 1916:—

### § 8. Closer Settlement.

1. **Introduction.**—In all the States, Acts have been passed authorising the Governments to repurchase alienated lands for the purpose of cutting them up into blocks of suitable size and throwing them open to settlement on easy terms and conditions. Special Acts have also been passed in several of the States authorising the establishment on particular lines of co-operative communities, village settlements, and labour colonies. Lands may be acquired either compulsorily or voluntarily in New South Wales, Victoria, Queensland, and Tasmania, but only voluntarily in South Australia and Western Australia.

The following table gives particulars up to the latest available date of operations under the Closer Settlement Acts for each State and the whole Commonwealth:—

**CLOSER SETTLEMENT.—TOTAL AREAS ACQUIRED AND ALLOTTED UP TO  
30th JUNE, 1917.**

\* To the preceding 31st December. † Including 10,382 acres of Crown lands.

**2. Government Loans to Settlers.**—For the purpose of promoting pastoral, agricultural, and similar pursuits, and with the object of assisting settlers in erecting buildings and carrying out improvements on their holdings, general systems have been established in all the States, under which financial aid is rendered to settlers by the State Governments. These general systems are more particularly referred to in the section in this book dealing with "Agriculture." In many of the Closer Settlement and similar Acts, however, special provisions have been inserted with the object of lending money to settlers taking up land under these Acts, with which to build homes or effect improvements. The principal features of these provisions are referred to below.

**3. New South Wales.**—Under the Closer Settlement Act of 1901 provision was made for the acquisition of private lands or of Crown lands held under lease, for the purpose of closer settlement. No power of compulsory resumption was conferred by the Act, which was in consequence practically inoperative. Under the Closer Settlement Act of 1904, and subsequent amendments, and the Closer Settlement Promotion Act 1910, the Government is empowered to resume private lands, either by agreement or by compulsory purchase, and to alienate them on favourable terms to persons who desire to settle and make homes for themselves and their families on the soil. Land acquired under the Acts is subdivided into blocks or farms, and by notification in the *Government Gazette* is declared to be a settlement purchase area available for application. The *Gazette* notice also gives all necessary information as to the class and character of the land, and the capital value, area, etc., of each block or farm.

(i.) *Closer Settlement Purchase.* Under this tenure a settler may acquire the freehold of the land under a system of deferred payments. A deposit of  $6\frac{1}{2}$  per cent. of the notified value of the settlement purchase must be lodged with the application, and a similar amount by way of instalment, paid annually until the purchase-money, together with interest at the rate of  $5\frac{1}{2}$  per cent., is paid off. Prior to 1st September, 1917, the deposit and annual instalments ranged from 5 per cent. to 6 per cent., and the interest from 4 per cent. to 5 per cent. Under this system the balance due to the Crown will be paid off in from thirty-one to thirty-eight years, the holding then becoming a freehold. A condition of residence for ten years attaches to every settlement purchase. Under the amending Act of 1909 postponement of the payment of two instalments may be granted by the Minister, subject to the conditions (a) that additional improvements to the value of the amount postponed be made on the land within twelve months, and (b) that interest be paid on the amount postponed. The Minister may also grant extension of

time to pay overdue instalments under certain conditions. The period allowed under any one such extension must not exceed five years, interest being charged on overdue instalments at the rate of 5 per cent. per annum.

(ii.) *Closer Settlement Permissive Occupancies.* The Minister may grant permits to occupy from month to month any lands within a settlement purchase area which remain undisposed of, subject to certain terms and conditions.

(iii.) *Sales by Auction.* Areas within closer settlement districts necessary for township settlement may be set apart by notification in the *Gazette*. Allotments, each of which may not exceed half an acre in extent, within such areas may be sold by auction.

(iv.) *The Closer Settlement Promotion Act 1910.* Under this Act any three or more persons or any one or more discharged soldiers within the meaning of the Returned Soldiers' (Amendment) Act 1917, each of whom is qualified to hold settlement purchases and who desire to purchase from the same owner any private lands may, upon entering into an agreement with the owner and subject to valuation by the Advisory Board and the Savings Bank Commissioners, acquire such lands through the Minister on Closer Settlement conditions. The maximum sum which may be advanced for the purposes of this Act may not exceed £1,000,000 in any financial year.

The following table shews the number and area of farms allotted since the passing of the Act:—

**NEW SOUTH WALES.—OPERATIONS UNDER CLOSER SETTLEMENT  
PROMOTION ACT 1910.**

Year.	Farms Allotted—		
	Number.	Area.	Amount Advanced.

Total ... ..	985	391,919	2,058,164

(v.) *Areas Acquired and Disposed of.* Up to the 30th June, 1917, thirty-five estates had been opened for settlement under the Closer Settlement Acts.

The following statement gives particulars of the aggregate areas opened up to the 30th June, in each year from 1913 to 1917:—

**NEW SOUTH WALES.—CLOSER SETTLEMENT AREAS, 1913 to 1917.**

Year Ended 30th June.	Areas.			Capital Values.		
	Acquired Lands.	Adjoining Crown Lands.	Total.	Acquired Lands.	Adjoining Crown Lands.	Total.

1917 ... ..	747,204	91,996	839,200	2,895,638	168,175	3,063,813

The total area thus set apart has been divided into 1683 farms, comprising 811,877 acres, the remaining area being reserved for recreation areas, roads, stock routes, schools, etc.

The following table gives particulars as to the disposal of the farms by closer settlement purchase for the years ended the 30th June, 1913 to 1917 :—

#### NEW SOUTH WALES.—CLOSER SETTLEMENT ALLOTMENTS, 1913 to 1917.

Year.	Farms Allotted by Board to Date.			Total Amount received in respect of Settlement Purchases.	Total Number of Applications received.
	Number.	Area.	Value.

1915-16 ...	1,609*	748,573*	2,860,636*	718,660	1,612
1916-17 ...	1,622	759,753	2,905,550	834,485	1,625

\* Including 46 Settlement Purchase Farms of 24,943 acres, with a capital value of £110,094, since converted into Homestead Farms.

Eleven estates, comprising 169,388 acres, and providing for 312 farms, acquired under the Closer Settlement Acts, were handed over during the year 1916-17 for settlement by returned soldiers.

(vi.) *Labour Settlements.* These settlements were founded by the Labour Settlements Acts 1893 and 1894, which were amended and repealed by the Labour Settlements Act 1902. Land might be set apart for lease for a period of 28 years as a labour settlement under the superintendence of a Board of Control. The functions of the Board of Control were to enrol members of the settlement; to make regulations concerning the work to be done; to apportion the work among the members; and to distribute the wages and profits. The Minister was empowered to grant financial assistance to the Board of Control. Only two settlements, those at Bega and Wilberforce, had been established under the Act up to the 30th June, 1917. The Labour Settlement Act 1902 was repealed by the Bega and Wilberforce Labour Settlement Act 1917, which dissolves the Boards of Control, and provides for the exclusive right of the present settler or his representatives to acquire within a specified period the block set down opposite his name in the schedule under the Act as a homestead selection under the Crown Lands Consolidation Act 1913. Particulars are given in the following statement :—

#### NEW SOUTH WALES.—PARTICULARS OF LABOUR SETTLEMENTS, 30th JUNE, 1917.

Total ...	—	1,445	34	39	100	173	4,600	4,899

The Murrumbidgee Irrigation Act 1910 provides for the acquisition of 1,668,000 acres near Narrandera, in Riverina, for irrigation and other purposes in connection with the Burrinjuck Irrigation Scheme. Part of this area has since been made available.

4. *Victoria.*—(i.) *Closer Settlement Act 1915.* The Closer Settlement Act in Victoria is administered by a Board consisting of three persons appointed by the Governor-in-Council, and entrusted with power to acquire, either compulsorily or by agreement, private lands in any part of the State for the purpose of Closer Settlement. The Board may dispose of all lands acquired, either Crown lands or repurchased lands, on conditional purchase leases either as (a) farm allotments not exceeding £2,500 in value, (b) workmen's homes allotments not exceeding £250 in value, and (c) agricultural labourers' allotments not exceeding £350 in value. The price of the land must cover the cost of the original purchase and the cost of all improvements. Land acquired by the Board may also be sold in small areas in fee simple as sites for churches, public halls, butter factories, creameries, recreation reserves, or other public purposes.

The Board may approve of an agreement between an owner and one or more persons to purchase a farm or farms, not exceeding £2,500 in value. On the property being acquired by the Board, the applicant obtains a lease under Closer Settlement conditions.

(a) *Closer Settlement Leases.*—Every conditional purchase lease is for such a term of years as may be agreed upon by the lessee and the Board, and payment must be made with interest at  $4\frac{1}{2}$  per cent. per annum by sixty-three half-yearly instalments, or such lesser number as may be agreed upon. Under the Act postponement of payment of instalments may be granted by the Board up to 60 per cent. of the value of improvements. The lessee must personally reside during eight months in each year on his allotment, and for six years he must carry out prescribed improvements. Thereafter he may, with permission, transfer, assign, mortgage or sublet his allotment. After twelve years, if all conditions have been fulfilled, a Crown grant, with the same residence condition as that contained in the lease, will be issued. In the case of workmen's homes allotments the land must be fenced within one year, and a dwelling-house to the value of at least £50 must be erected within the same time; within two years further improvements must be made to the value of at least £25. As regards agricultural labourers' allotments, a dwelling-house to the value of at least £30 must be erected within one year, and within two years the allotment must be fenced. In the case of workmen's homes and agricultural labourers' allotments, the lessee may at any time transfer, assign or sublet with the consent of the Board.

(b) *Advances to Settlers.*—The Board may make advances for the purpose of fencing and building dwelling-houses, and is empowered to erect dwelling-houses, outbuildings, or improvements on any allotment at a cost not exceeding £500 for any one allotment. Any sum so expended is repayable, with interest added, by instalments extending over a prescribed period, not greater than twenty years. Provision has also been made for deferring payments in case of hardship, as well as for advances (to the extent of 60 per cent. of the value of the improvements) to enable work to be carried on. Special advances may also be granted to purchase wire netting in rabbit-infested districts.

(c) *Loans to Municipalities.* Loans may be made out of the Closer Settlements Fund for the purpose of carrying out any road-making or other public works within the boundaries of an estate.

(d) *Areas acquired and made available for Closer Settlement.* The following statement shows the operations which have taken place in Victoria under the provisions of the Closer Settlement Acts, 1898 to 1915, up to the 30th June, 1901 and 1913 to 1917 :—

### VICTORIA.—CLOSER SETTLEMENT, 1901 and 1913-1917.

(INCLUDING IRRIGATED AREAS.)

Year ended 30th June.	Total Area Acquired by Government to Date.	Total Cost to Date.	How Made Available for Settlement.						Number of Applications Granted to Date.	Total Receipts to Date.	Repayments of Principal to Date.	Area Available for Settlement.
			Farm Allotments.	Workmen's Homes Allotments.	Agricultural Labourers' Allotments.	Town Allotments.	Roads and Reserves.					
	Acres.	£	Acres.	Acres.	Acres.	Acres.	Acres.	No.	£	£	Acres.	
1901	28,553	151,566	28,461	69	—	44	240	193	7,529	—	—

\* During 1915, areas previously classed as Workmen's Homes and Agricultural Allotments were transferred to Farm Allotments.

(ii.) *The Small Improved Holdings Act 1906.* Under this Act, which has been repealed, 2822 acres at a cost of £53,568 allotted to 260 settlers were purchased close to towns where industrial employment could be obtained by the settlers.

These settlements are now under the control of the Closer Settlement Board.

(iii.) *Village Communities.* The rights of lessees of land in Village Communities are now provided for in the Land Act 1915. Certain unalienated Crown lands were surveyed into allotments of one to twenty acres. The price is not less than twenty shillings an acre. Additional areas may be acquired by conditional purchase. The rent is a nominal one for three years. The total amount of monetary aid advanced up to the 30th June, 1917, was £67,379, of which sum the amount repaid to date was £43,935. After three years a lease may be obtained.

On the 30th June, 1917, there were 671 settlers actually residing, and 79 not residing, but improving, making a total of 750 in occupation. Including wives and children the total number in residence was 3274.

(iv.) *Closer Settlement in the Irrigation Districts.* The movement for closer settlement in the irrigation districts started about eight years ago, when the State adopted the policy of purchasing large areas of land commanded by irrigation schemes, and subdividing them for intensive culture. The management and supervision of these areas were formerly vested in two bodies—the Closer Settlement Board and the Water Supply Commission, but in order to do away with this dual control, the Amending Closer Settlement Act of 1912 (now incorporated in the Closer Settlement Act 1915) was passed, transferring to the Water Supply Commission the entire management, leasing, and general supervision of all such areas within irrigation districts. The State had expended between three and four million pounds on irrigation works, which were not being used to their full extent. Under the Goulburn Scheme, the largest of the State works, more than half the available water was being wasted. The reason was lack of people to cultivate the land as irrigation requires. Previously, in the various districts the average size of farms varied from 400 to 600 acres, while under irrigation from about 20 to 80 acres will now give employment to a good-sized family and furnish them a comfortable living.

The large farms of the irrigation districts could not be properly cultivated by their owners, and the only way to make irrigation a success was to subdivide these holdings and bring in farmers to cultivate the smaller areas. To this end the State offered to buy suitable land in any district having a reliable and ample water supply, at a price fixed by impartial expert valuers, and has now purchased 111,714 acres for this purpose. This land is sold to settlers on  $31\frac{1}{2}$  years' terms with  $4\frac{1}{2}\%$  interest on deferred payments, under what are known as closer settlement conditions, which, while providing for the liberal terms and advances referred to in this paragraph, require, on the part of the settler or his successor, residence on the block for at least 8 months in each year. These payments are calculated on the Credit Foncier basis and are equalised through the whole period. As a result the settlers, by paying an additional  $1\frac{1}{2}$  per cent., or six per cent. in all, in  $31\frac{1}{2}$  years pay off both principal and interest. In the early stages of irrigated closer settlement the State undertook, where desired by settlers, to prepare portions of their holdings for irrigation by grading, seeding, check-banking, and constructing distributory channels, settlers being allowed to pay the cost of such works by instalments extending over ten years. The development of these settlements has, however, now reached such a stage that this is no longer necessary. Contract labour is available to new settlers, and there are facilities for the carrying-out of this work locally, but financial assistance to the same extent is still available. To further help the settler of limited means, the State will build a house and allow twenty years to pay for it. The cash payments required are as follows:—On houses costing less than £100, £10; on houses costing more, the cash payment varies from  $12\frac{1}{2}$  to 30 per cent. of the estimated cost. The State also makes loans to settlers equal to 60 per cent. of the value of permanent improvements, these loans to be repaid in 20 years. Five per cent. interest is charged on all advances—whether for houses, preparing land, or money furnished the settler. Last year 150 blocks were granted to new settlers, 42 of whom were discharged soldiers. During the past eight years 73,349 acres have been settled in farms averaging sixty acres each—the homes of 1209 new settlers—874 Australian, and 335 from overseas. There are also 374 allotments comprising 17,300 acres ready for immediate occupation, and a further 16,000 acres being prepared for settlers. At Shepparton, one of the oldest of these settlements, there are now 258 settlers living where there were originally twenty. At Cohuna, another early settlement, some settlers have made such satisfactory progress, that they have paid in full their land and other instalments, though their leases, which are for  $31\frac{1}{2}$  years, are only some seven years old. In Koyuga there are forty-nine settlers with good houses, many young orchards, fine crops of lucerne and vegetables, where in November 1910 there was not a house, a family, or an acre of cultivated land. Taking the settlements as a whole, including Nyah and Merbein settlements referred to in Section XIV., 82,000 acres have been settled, of which 27,000 acres are under lucerne, 12,000 under fruit, and 15,000 under other crops. There are now twelve settlers' homes for every one that existed on these areas when repurchased by the State.

Houses now being erected are of a better type than the original ones. This has been made possible because the settlers now applying have as a rule more capital than the earlier ones and desire better homes. Reports received regularly from officers in charge of irrigation districts indicate that in nearly all cases the settlers are making good progress on their holdings, and that there is undoubtedly an increasing feeling of security and permanence pervading these settlements.

The war conditions have made the disposal of the products of these settlements a matter of some difficulty. In regard to soft fruits, for instance, there was in December and January last a very heavy glut, and the position was so critical that the commission arranged a peach pool for the irrigation closer settlement districts. This was continued until the Government, by obtaining some large war contracts for jam, was able in a great measure to arrange for the absorption of the surplus. In Shepparton district the settlers, in view of last year's difficulty in disposing of their fruit, requested the Government to

advance them a sum under the proposed Fruit Act for the establishment at Shepparton of a fruit-processing factory. The Government signified its willingness to assist as suggested, and the building is now in course of erection.

5. *Queensland.*—(i.) *Closer Settlement.* Up to 31st December, 1916, under the provisions of the Act of 1906, private lands for Closer Settlement might be repurchased by the Crown, either by agreement or compulsorily. From 1st January, 1917, however, the opening of land for agricultural farm selection has not been allowed. Under the present law, the remainder of the land (after provision for roads, reserves, etc.) is opened for selection as perpetual lease selections at an annual rent fixed by the Minister, but at a rate per cent. of the capital value not less than the rate of interest paid by the Government on the purchase money of the estate of which the land forms part. The deposit of 10 per cent. is abolished, but so also is the provision that no rent need be paid during the second, third, and fourth years of the term. The rent may be reappraised for each period of fifteen years.

(a) *Compulsory Acquisition.* The owner of an estate in possession, the whole of which was proposed to be taken compulsorily, had the right to retain in one block, land of the value of £10,000 to £20,000, according to the value of the whole estate. The maximum sum which might be expended in any one year on the acquisition of land for the purpose of closer settlement was £500,000.

(b) *Disposal of Land.* A sufficient part of the land acquired must be set apart for roads, public reserves, and townships, and the remainder was proclaimed open for selection as agricultural farms under the Land Act 1910, which repealed the Land Acts 1897 to 1909, and under the Closer Settlement Act Amendment Act of 1913; the term of the lease was 40 years. The rent to be paid for the first year was equal to £10 for every £100 of the purchasing price; and (no payment being required during the second, third, or fourth years) an annual payment of £6 6s. 0d. for every £100, continued from the fifth to the fortieth year, would, at the end of the term, have paid off the principal sum together with interest.

(c) *Areas Acquired and Selected.*—The following table gives particulars of the operations under the above Acts at the end of the year 1901 and of each year from 1912 to 1916:—

#### QUEENSLAND.—CLOSER SETTLEMENT, 1901 and 1912-16.

Year.			Number of Estates Acquired.	Total Area Acquired to Date.	Total Amount of Purchase Money.	Total Area Selected to Date. <sup>1</sup>
				Acres.	£	Acres.
1901	...	...	15	132,760	335,056	124,710
1912	...	...	29	664,363	1,713,165	525,168
1913	...	...	29	664,363	1,713,165	543,788
1914	...	...	29	664,363	1,713,165	559,597
1915	...	...	29	664,363	1,713,165	582,788
1916	...	...	30	785,311	1,955,060	589,047

1. In addition there were at the end of the year 1916, 12,498 acres sold at auction and 3332 acres retained by the Government for experimental farms and for other sales.

The total area opened for selection up to the end of the year 1916 was 640,315 acres, of which 589,047 acres had been selected by 2204 selectors. There remained 51,268 acres unselected or reserved. The total amount of rent paid up to the same date was £1,186,241,

the amount in arrear being £17,406. At the end of the year 1916 there were 2231 selectors holding 2389 agricultural farms, 254 unconditional selections, and five prickly pear selections. In addition, land and improvements to the value of £90,966 had been sold at auction.

(ii.) *Group Settlement.* The Special Agricultural Selections Acts 1901 to 1905 were partly repealed by the Amending Act of 1909, which was in its turn repealed by the Land Act 1910. Under the last Act, land may be set apart for members of bodies of selectors who desire to settle in the same locality. The terms and conditions are similar to those in force for single selectors. Every group selection shall be subject to the condition of personal residence during the first five years of the term.

The Special Agricultural Selections Act 1905 provides that financial aid may be granted to all or any of the members of a body of selectors of agricultural homesteads. Advances may also be made to each selector for a value not exceeding £80 for the purpose of buying tools, rations, stock and poultry.

The portions opened for *group settlement* in 1916 numbered 33, and comprised a gross area of 16,962 acres. Up to the end of that year 26 portions, comprising 13,588 acres, valued at £6,783, had been applied for by members of the bodies of settlers for whom they were opened.

6. **South Australia.**—Under the provisions of the Crown Lands Acts the Commissioner may repurchase land for the purposes of closer settlement at a cost not exceeding £600,000 in any two years.

Reference is made on the next page to the provisions of the Irrigation and Reclaimed Lands Acts 1908, as consolidated by the Act of 1914, regarding the settlement of reclaimed lands.

(i.) *Disposal of Land.* The Crown Lands Act Further Amendment Acts 1915 and 1917 enlarge the value of the blocks into which estates may be subdivided for closer settlement purposes from £2000 to £5000 unimproved value. The purchase-money with interest thereon at 4 per cent. per annum is payable in 128 half-yearly instalments.

For the first five years, improvements to the value of £3 for every £100 of the purchase money must be yearly effected.

(ii.) *Areas Acquired and Selected.* The following table shews the area of land acquired by the Government in South Australia for the purposes of closer settlement, and the manner in which the same has been disposed of under the provisions of the Crown Lands Acts for the years 1902 and 1912 to 1916:—

**SOUTH AUSTRALIA.—CLOSER SETTLEMENT, 1902 and 1912-16.**

Year.	Area of Lands Repurchased to 31st Dec.	Agreements with Covenants to Purchase.	Total Area Leased as Homestead Blocks.		Perpetual Leases.	Miscellaneous Leases.	Sold.	Remainder Unoccupied (including Roads).
			Right of Purchase.	Perpetual Lease.

1916	729,963	487,355	733	1,513	52,138	164	66,607	121,453

During the financial year 1916-17, eleven properties of 28,170 acres were repurchased. The total area repurchased at 30th June, 1917, was 742,797 acres, the purchase-money being £2,438,195. Of that area 678,393 acres had been allotted to 2682 persons, the average area to each being 253 acres.

(iii.) *Irrigation Areas.* Under the Irrigation and Reclaimed Lands Act 1914, special provisions are made for granting perpetual leases of reclaimed lands. The maximum area of irrigable or reclaimed land one person may hold in any irrigation area is 50 acres, but in the case of partnerships 50 acres may be held by each partner up to a maximum of 150 acres. Land above the irrigating channels is also offered to lessees of irrigable blocks for dry farming, grazing, etc. Each block is offered under perpetual lease, at a rent not less than a sum equivalent to 4 per cent. on the unimproved value of the land, plus the cost of reclaiming. In the case of swamp lands in the reclaimed lands, a drainage rate of from 5s. to 7s. 6d. per acre per annum is payable. On the irrigable land the water rate has been fixed at 30s. per acre per annum for the first four years, after which an amount will be charged sufficient to cover actual cost of supplying water, and the interest on pumping plants, channels, etc. A sliding scale covers both the rent and water rates for the first four years.

Under Part V. of the Act a fund has been constituted called the Lessees of Reclaimed Lands Loan Fund, consisting of money provided by Parliament to be expended by the Department in assisting settlers on the irrigation areas by fencing, clearing and grading their blocks, and constructing irrigation channels and drains and concrete tanks thereon. Such improvements will be undertaken up to a value not exceeding £15 per acre of the irrigable area in each lessee's block, but before the work can be commenced a deposit must be paid equal to 15 per cent. of the Department's estimated value of such improvements.

The total cost of the work, less amount of deposit paid, will be treated as a loan to the lessee, and will be repayable in twenty equal annual instalments, after the expiration of five years, or at any shorter period if so desired by the lessee, current rate of interest being charged.

Any lessee will be permitted to accept the contract for carrying out his own improvements, according to the specifications and estimate of the Department, up to the maximum amount per acre, as mentioned above.

(iv.) *Village Settlement.* Out of the reserved lands the Commissioner is directed to set apart for the purpose of village settlement such land as he shall consider fit (a) for horticultural purposes, to be termed "horticultural land"; (b) for agricultural purposes, to be termed "commonage land"; and (c) land whereon any irrigation works are situated. Land so set apart is to be divided as follows:—Horticultural lands into blocks of as nearly as practicable equal unimproved value, and of about ten acres in extent; and the commonage lands into one or more blocks of such area as the Commissioner may determine, and the lands so set apart in each case form the district of the association. No person may hold more than two blocks. Commonage lands may only be leased to the association on perpetual lease, and all unleased horticultural blocks are under the control of the association. Every member of each association must provide or contribute towards the maintenance and regulation of irrigation works, and the care and cultivation of the commonage lands.

As the Waikerie and Kingston districts were proclaimed irrigation areas under the Irrigation and Reclaimed Lands Acts 1908 and 1909, this would leave only the Lyrup Village Settlement, which is in a better position, both financially and as regards population, than the others.

(v.) *Homestead Blocks.* Aboriginal reservations, except those at Point McLeay or Point Pearce, and other suitable lands may be offered as homestead blocks on perpetual lease or lease with a right of purchase. Each block must not exceed £100 in value, and residence by a member of the family for at least nine months of every year is compulsory.

There is now hardly any demand for homestead blocks, persons generally preferring small blocks of repurchased or Crown lands on ordinary conditions. The system appears to be of value only in centres of population where work can be obtained, and within a reasonable distance of a school.

- (a) *Advances to Blockholders.* Advances up to £50 may be made by the Commissioner to any homestead blockholder who has complied with the conditions of his lease or agreement, to assist in erecting permanent buildings on the blocks, or other improvements. Advances must be repaid, with interest at 4 per cent. per annum, by twenty equal instalments, commencing twelve months from the date of advance. The Commissioner may, in case of hardship, extend the time of repayment, such deferred payments bearing interest at 5 per cent. per annum. The total amount advanced up to the 30th June, 1917, was £41,376, of which £39,204 had been repaid.
- (b) *Particulars of Homestead Blocks.* The total number of leases and agreements of which purchase had been completed to the 31st December, 1916, was 2271, comprising 34,256 acres, at a purchase price of £92,163, or an average of £2 8s. 0d. per acre, the average of each holding of which purchase was completed being 15 acres.

7. **Western Australia.**—Under the Agricultural Lands Purchase Act 1909, which repealed and consolidated the Agricultural Lands Purchase Acts 1896 to 1904, sums not exceeding in the aggregate £400,000 may be expended on the repurchase of Crown lands near the railways, suitable for immediate cultivation.

(i.) *Acquisition of Land by the Government.* For the purpose of carrying out the provisions of the Acts, a Land Purchase Board has been constituted. Advised by the report of the Board, the Minister, with the approval of the Governor, may make a contract for the acquisition of the land by surrender at the price fixed by the Board, or at any lesser price.

(ii.) *Sale of Repurchased Land.* After reservation of part of the repurchased land for public purposes, the remainder is thrown open for selection. The maximum quantity held by one person must not exceed 1000 acres; in special cases 2000 acres.

(iii.) *Conditions of Sale to Selectors.* The maximum selling price of any repurchased land is equal to 105 per cent. of the actual cost of the land plus the cost of any improvements made upon it. A lease for twenty years is issued at a rent, the half-yearly instalments of which are to be at the rate of £3 17s. 9d. for each £100 of the selling price. Improvements must be made to the value of one-fifth of the purchase-money every two years of the first ten years of the lease. One-half of the land must be fenced within the first five years and the whole within ten years. Loans may be granted to selectors under the provisions of the Agricultural Bank Acts.

(iv.) *Areas Acquired and Selected.* The transactions conducted under the provisions of the Agricultural Lands Purchase Acts are shewn for 1901 and for each year from 1913 to 1917 in the subjoined table:—

**WESTERN AUSTRALIA.—CLOSER SETTLEMENT, 1901 and 1913-17.**

Year.	Total Area Acquired.	Total Purchase-money.	Roads, Reserves, etc.	Total Area made available for Selection.	Area Selected during the Year.	Total Area occupied to Date.	Balance of Area available for Selection.	Total Revenue received to Date.
	Acres.	£	Acres.	Acres.	Acres.	Acres.	Acres.	£
1901 ...	46,624	52,764	1,459	45,165	4,295	37,235	7,929	14,451
1912-13	446,804	421,333	12,799	290,670	10,335	270,945	19,724	175,245
1913-14	446,804	421,333	128,605	315,133	2,451	268,260	46,873	210,675
1914-15	446,804	421,373	15,825	430,979	4,122	272,190	158,789	239,409
1915-16	446,804	421,373	15,825	430,979	342	271,242	159,737	268,232
1916-17	446,804	421,373	15,825	430,979	77	269,648	161,331	295,740

\* The figures for 1901 are up to 31st December. For subsequent years they are given as up to 30th June.

On the 30th June, 1917, the total expenditure, exclusive of purchase-money but including interest, was £158,452, which left a balance of £137,288. At the same date the amount invested as sinking fund was £132,757.

(v.) *Workingmen's Blocks.* Any person not already holding land within the State is entitled to obtain a lease of lands which have been surveyed and thrown open for selection as workingmen's blocks. The maximum area that may be selected by one person is, if within any town or goldfield, half an acre, or five acres elsewhere. The price is not less than twenty shillings per acre, payable in ten years by half-yearly instalments. Residence and improvement conditions must be fulfilled. At the expiration of the lease, or at any time after five years from the date of the commencement of the lease, upon compliance with all conditions and upon payment of the full purchase-money and fee, a Crown grant will be issued. No person who has once held a workingman's block is allowed to select another, except under very special circumstances.

The following table shows the number and area of accepted applications for workingmen's blocks during each year, as well as the total number and area in existence at the end of the year 1901 and for each year from 1912 to 1917 :—

**WESTERN AUSTRALIA.—PARTICULARS OF WORKINGMEN'S BLOCKS,  
1901 AND 1912-17.**

Year ... ..	1901.	1912.*	1913.*	1914.*	1915.*	1916.*	1917.*

<b>NUMBER AND AREA OF BLOCKS OCCUPIED AT END OF YEAR.</b>							
Number	7	327	230	168	189†	176	134
Area in Acres	31	688	617	590	584	565	510

\* For financial year ended 30th June.

† Increase due to cancelled leases being reinstated.

During the years 1907 to 1911 residential blocks on the goldfields were made available as workingmen's blocks, instead of under residential lease, as before, and since 19th October, 1911, the system of leasehold has been reverted to.

8. *Tasmania.*—The principles of closer settlement were not introduced into Tasmania until the Closer Settlement Act of 1906 was passed. Under this Act, which was amended in 1908 and 1911, and consolidated in 1913, power is given to the Minister for Lands, on the recommendation of the Closer Settlement Board, to purchase compulsorily or by agreement private land in any part of Tasmania for the purpose of closer settlement, and also to deal with and dispose of any unoccupied Crown land for the same purpose.

(i.) *Disposal of Land.* Lands so brought under the Act are subdivided into farm allotments of a suitable size—not exceeding £4000 in value—and are disposed of by way of lease for ninety-nine years. The rental is determined by the Board at a rate not exceeding 5 per cent. per annum on the capital value of the land. Any lessee who has fulfilled the conditions under the Act may, after the expiration of ten years of the term of the lease, purchase the land leased to him. The Minister has power to dispose of the fee simple of such land in any estate which is considered unsuitable for closer settlement.

A lessee must improve his holding to a value equal to  $2\frac{1}{2}$  per cent. on the capital value of the land in each of the first ten years of the term of his lease, and he must, within two years of the date of the lease, personally reside on his allotment during at least eight months of each of the following nine years. Provision is made for reserving a proportion of the allotments thrown open, and leasing the same, under special terms and conditions, to *bona fide* immigrants.

(ii.) *Advances to Settlers.* The total advance by the Government in aid of the cost of effecting improvements to any one lessee must not exceed pound for pound of the sum expended by him in building and other improvements. Such advances must be repaid, together with interest at 5 per cent., in equal half-yearly instalments within a period not exceeding 21 years.

(iii.) *Special Sales.* The fee-simple of land acquired may be disposed of by sale on the recommendation of the Board as sites for churches, public halls, dairy factories, fruit-preserving factories, mills, or creameries. The area sold may not exceed one acre in the case of a church or public hall, or five acres in other cases.

(iv.) *Areas Acquired and Selected.* Up to the 30th June, 1917, twenty-four areas had been opened up for closer settlement. Particulars are given in the following statement:—

#### TASMANIA.—CLOSER SETTLEMENT, 1909 to 1917.

Year.	Number of Farms made Available.	Number of Farms Allotted.	Area of Farms Allotted.	Rental of Farms Allotted.	Total Area Purchased.
			Acres.	£	Acres.
1909 ... ..	49	45	9,117	789	7,902
1910 ... ..	9	15	1,872	539	1,362
1911 ... ..	37	36	4,965	168	5,143
1912 ... ..	11	7	3,912	563	6,147
1913 ... ..	18	21	5,652	1,134	3,745
1914 ... ..	24	17	8,975	1,959	10,756

1916 ... ..	5	11	1,729	476	157
1917 ... ..	5	15	3,900	993	1,939

The total purchase-money paid by the Government up to the 30th June, 1917, was £274,563.

### § 9. Occupation of Crown Lands under Leases and Licenses

#### Issued by Mines Departments.

1. *Introduction.*—Leases and licenses for the occupation of Crown lands for mining and other purposes are issued by the Mines Departments in all the States. Such leases and licenses may be issued with respect to all Crown lands, whether otherwise unoccupied or whether occupied also under leases and licenses issued by the Lands Departments. Certain Crown lands, such as reserves, etc., are, however, subject to special conditions.

(i.) *Mining on Private Lands.* Certain of the Crown lands of the several States have been alienated from time to time, subject to various reservations in respect of gold and other minerals which might afterwards be found therein. Other lands have been

alienated without such reservation, but as the mineral gold does not pass from the Crown unless by express conveyance, it has remained the property of the State on all alienated lands. All lands alienated or in process of alienation are open to mining for gold; but to mining for other minerals, those lands only are open, in respect of which the rights are reserved in the grants. There are, however, generally certain reservations, such as those with reference to town or village lands and lands which have been built on or are used for special purposes. The working of minerals on private lands is regulated in the several States either by special Acts or by special provisions of the Acts relating to mining.

(ii.) *Leases and Licenses Issued and Total Areas of Crown Lands Occupied.* The following tables shew the total areas of Crown lands for which leases and licenses for mining purposes were issued in each State during 1901 and for each year from 1912 to 1916 inclusive, and also the total areas of Crown lands occupied for mining purposes at the end of each year during the same period:—

1. Including private lands, leases, and water right licenses only. 2. Exclusive of lands held under miners' rights only. 3. Exclusive of miners' rights. 4. Excluding Victoria.

2. **New South Wales.**—Under the provisions of the Mining Act 1906 and the regulations made thereunder, Crown lands may be occupied for mining or other purposes by virtue of (i.) miners' rights; (ii.) business licenses; (iii.) authorities to prospect; or (iv.) leases.

A description of the conditions under which these licenses and leases are granted may be found in previous issues of the Year Book. (See Year Book No. 6, p. 307.)

(i.) *Particulars of Leases and Licenses Issued, 1916.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1916:—

## NEW SOUTH WALES.—LEASES AND LICENSES

3. *Victoria.*—The occupation of Crown lands for mining and auxiliary purposes in this State is regulated by the Mines Act 1915. The Department of Mines and Forests is authorised to issue mining leases (gold-mining, mineral, and dredging), also licenses (searching, tailings, and water-right), while miners' rights and business licenses are issued by the Treasury Department, and residence areas are registered by local mining registrars. A description of the conditions governing the issue of these leases and licenses will be found in previous editions of the Year Book. (See Year Book No. 6, p. 308.)

Licenses of auriferous lands not for mining purposes may be issued by the Lands Department.

*Leases and Licenses Issued and Areas Occupied for Mining.* Particulars of leases and licenses for mining purposes of Crown lands alone are not available, the official returns including also private lands. During the year 1916 the number of mining leases, licenses, etc., issued was 173, covering an area of 7173 acres; the rent, fees, etc., received amounted to £754. No particulars are available as to the total area of either Crown or private land occupied for mining purposes.

4. **Queensland.**—The occupation of the Crown lands for mining purposes in this State is regulated by the Mining Acts 1898 to 1902, the Mining for Coal and Mineral Oil Act 1912, and the Miners' Homestead Leases Act 1913. Under these Acts the Department of Mines is authorised to issue :—(i.) Miners' rights; (ii.) mining leases; (iii.) mining leases and licenses for coal and mineral oil; and (iv.) miners' homestead leases.

The conditions which govern the issue of miners' rights, mining leases, and miners' homestead leases are described in previous issues of the Year Book. (See Year Book No. 6, p. 309.)

Mineral leases for coal and mineral oil may be granted for a term of twenty-one years at an annual rent of sixpence an acre, together with a royalty, according to the distance the lease is from a seaport or other place of delivery, of twopence to threepence per ton of coal raised during the first five years of the lease, and of fourpence to sixpence per ton during the remainder of the term. A lease for mineral oil with a maximum area of 320 acres may be granted for a term of 21 years at an annual rental of 6d. per acre, with a royalty of 5% of the value of all crude oil produced. Licenses to occupy not more than 2560 acres may be granted to any person desiring to prospect Crown lands for coal and mineral oil upon payment of one penny for every acre comprised in the application.

The "Mining on Private Land Act 1909," authorises the granting of leases, etc. on and under private land, under conditions as to compensation, etc.

(i.) *Particulars of Leases and Licenses Issued, 1916.* The subjoined table gives particulars of the leases and licenses of Crown lands issued for mining purposes during the year 1916:—

\* Exclusive of lands held under miners' rights only.

5. **South Australia.**—In this State leases and licenses for mining purposes are issued by the Department of Mines under the authority of the Mining Act 1893, and amending Acts. Under these Acts mining and prospecting are permitted in virtue of (i.) miners' rights; (ii.) mining leases; (iii.) coal or oil leases; and (iv.) miscellaneous leases, and in addition occupation of Crown lands is permitted by virtue of (v.) business claims, and (vi.) occupation licenses.

The conditions which govern the issue of these various leases and licenses have been described in previous issues of the Year Book. (See Year Book No. 6, p. 311.)

(i.) *Particulars of Leases and Licenses.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1916:—

## SOUTH AUSTRALIA.—LEASES AND LICENSES

ISSUED BY MINES DEPARTMENT DURING YEAR 1916.

Particulars.	Act under which Issued.	Purpose for which Issued.	Area. Acres.
Leases ... ..	Mining Act 1893 ... ..	To mine for— Gold and other metals and miner's	923
Mineral claims	"	"	7,219
Licenses ... ..	Mining Act Amendment Act 1900 ... ..	To search for "precious stones, mineral phosphates, oil, rare metals, minerals, and earths, the mining for which has not proved payable in any portion of the State	549,760
Occupation licenses ... ..	Mining Act 1893 ... ..	Occupation by miners ... ..	9
Total ... ..	—	—	557,911

(ii.) *Leases and Licenses Issued and Areas Occupied.* The following table gives particulars of the areas of Crown lands for which leases and licenses were issued by the Mines Department during each year, and of the total area of Crown lands occupied under such leases and licenses at the end of the year 1901 and from 1912 to 1916 inclusive:—

### SOUTH AUSTRALIA.—LEASES AND LICENSES

ISSUED BY MINES DEPARTMENT, 1901 AND 1912 TO 1916.

Particulars.	1901.	1912.	1913.	1914.	1915.	1916.

\* Exclusive of miners' rights.

7. *Tasmania.*—Under the provisions of the Mining Act 1917, Crown lands in this State may be occupied for mining and auxiliary purposes by virtue of (i.) prospectors' licenses; (ii.) miners' rights; (iii.) mining leases; and (iv.) miscellaneous licenses. Business and residence licenses within mining areas may be issued by the Lands Department.

A description of the conditions under which these leases and licenses are issued may be found in previous editions of the Year Book. (See Year Book No. 6, p. 314.)

(i.) *Particulars of Leases and Licenses Issued, 1917.* The following table shows particulars of leases and licenses of Crown lands, exclusive of prospectors' licenses and miners' rights, issued by the Mines Department during the year 1917 :—

### TASMANIA.—LEASES AND LICENSES

\* See note to preceding table.

8. **Northern Territory.**—The granting of leases and licenses for mining purposes in the Northern Territory is under the control of the Administrator. The area of land held under Mining Regulations in the Northern Territory has been previously referred to in § 7 of this chapter (page 271).

## § 10. Resumption by Crown of Alienated Lands.

**1. General.**—Under various Acts, alienated lands may be compulsorily resumed by the Crown in the several States for certain purposes, generally connected with works of a public nature. Resumptions for closer settlement purposes have already been referred to (see § 8, above). In most of the States there are Lands Clauses or similar Acts providing the machinery, and indicating the procedure to be adopted in assessing the compensation to be paid by the Crown to private owners in cases where the parties have failed to agree as to the amount to be paid. The provisions of these Acts are generally incorporated in the special Acts specifying the purposes for which alienated lands may be resumed. Lands leased for pastoral purposes may generally be resumed by the Crown on short notice. The lessee is ordinarily entitled to compensation for land resumed, for loss or depreciation in value of the lease caused by such resumption, and for improvements.

(a) *New South Wales.* Alienated lands may be recovered by the Crown for authorised works and certain public purposes under the provisions of the Public Works Act 1900, and in other cases may be acquired by the Crown by purchase, gift, or surrender under Executive authority. Alienated lands required for public roads may be resumed under the Public Roads Act 1902, and if containing gold may be resumed for mining under Section 72 of the Mining Act 1906. Lands dedicated or granted by the Crown for public purposes may be resumed under Section 25 of the Crown Lands Consolidation Act 1913, and Section 1 of the Public Trusts Act 1897. Surrender and exchange of lands alienated or in process of alienation may be carried out under Section 195 of the Crown Lands Consolidation Act 1913.

(b) *Victoria.* In Victoria lands may be resumed in accordance with the provisions of the Lands Compensation Act 1915, the Public Works Act 1915, the Railways Act 1915, the Land Act 1915, the Local Government Act 1915, the Water Act 1915, and the Forests Act 1915.

(c) *Queensland.* In this State alienated lands may be resumed under the provisions of the Public Works Land Resumption Act 1906, for any of the purposes specified in section 4 of that Act.

(d) *South Australia.* In this State the principal Acts under which land is repurchased for public works are the Railway Commissioners Act 1887, the Water Conservation Acts 1886, 1889, and 1900, the Waterworks Act 1882, and the Sewers Act 1878.

(e) *Western Australia.* In Western Australia private lands may be resumed under the provisions of the Land Act 1898, the Roads Act 1902, and the Public Works Act 1902.

(f) *Tasmania.* The procedure for resuming land when required for road purposes is as follows:—

When provision is made by Parliament for a Public Works vote for any road, or when an amount is available from other sources, as under the Crown Lands Act (under which a proportion of the amount paid as purchase money is set aside for road purposes), application is made to the owner of the property through which the road is to pass. In most cases either land is given free or a price is agreed on between the owner and the officers of the Department. The purchase-money, with cost of necessary survey, is charged against the provision as referred to above, the land is surveyed and proclaimed under the provisions of the Lands Vesting Act 1894. In case of it being impossible to settle the matter by arrangement with the owner, the land can be acquired by arbitration under the Lands Clauses Act, which is incorporated with the Public Works and Crown Lands

Acts, but since the passing of the Lands Resumption Act 1910 it is possible to acquire it compulsorily without waiting for the usual formalities. Under this Act a notification is given to the owner, the land is surveyed, and then resumed by notification in the Gazette, on the publication of which the fee simple of the land vests at once in the Crown absolutely. The owner is then called upon to submit his claim, and the amount can be settled either by arbitration or by a court of competent jurisdiction in accordance with the provisions of the Lands Resumption Act. This procedure under the Lands Resumption Act is now becoming much more general in cases where the land cannot be acquired by arrangement, and it is expected that the effect of the operation of the Act will be to the advantage of the Government and consequently to the public, in enabling land to be acquired more economically than under the former practice. The local bodies, *i.e.*, the municipalities, have also power to acquire land under the provisions of the Local Government Act, but in practice it has been found most convenient for the procedure to be carried out by the Public Works Department on behalf of the local bodies, and this insures the title being vested in the Crown, which gives uniformity of practice, and has also the effect that inquiry made as to title at the Government office shews at once the land that has been acquired.

2. **Areas Resumed.**—The subjoined table shews, so far as particulars are available, the areas of private lands resumed, exclusive of resumptions for closer settlement purposes, in each State during 1901 and 1912-16:—

**AREAS OF PRIVATE LANDS RESUMED BY THE CROWN, 1901 and 1912-16**  
(EXCLUSIVE OF RESUMPTIONS FOR CLOSER SETTLEMENT).

## § 11. Alienation and Occupation of Crown Lands in the Several States.

1. **Introduction.**—The tables given in the previous parts of this section shew separately the areas alienated, in process of alienation, and occupied under various tenures in the several States. The tables given below shew collectively the general condition of the public estate in each State, having regard to (a) the area alienated absolutely, which includes free grants, sales, and conditional purchases for which grants have been issued, the conditions having been complied with; (b) the area in process of alienation, comprising holdings for which the fee-simple has not yet been alienated, but which are in process of sale under systems of deferred payments; (c) the area occupied under all descriptions of leases and licenses; and (d) the area unoccupied, which, ordinarily, includes roads, permanent reserves, forests, etc. In some cases, however, lands which are permanently reserved from alienation are occupied under leases and licenses, so that

in such cases the areas reserved are comprised in class (c) and not in class (d). Particulars of leases and licenses of reserved areas, as distinguished from leases and licenses of other lands, are not available. It should be observed that in many cases lands occupied under leases or licenses for pastoral purposes are held on short tenures only, and could thus be made available for settlement practically whenever required.

2. **New South Wales.**—The total area of the State of New South Wales (exclusive of Lord Howe Island and Commonwealth Territory) is 198,058,880 acres, of which on the 30th June, 1917, 40,661,225 acres, or nearly one-fifth, were alienated absolutely; 19,847,737 acres, or over one-tenth, were in process of alienation; 117,015,359 acres, or upwards of three-fifths, were occupied under Lands Department, Western Land Board, or Mines Department leases and licenses; and the remaining 20,534,559 acres, or about one-tenth, were unoccupied. The next table shews the areas alienated, in process of alienation, held under leases and licenses, and unoccupied, in 1901 and from 1913-14 to 1916-17.

During the year 1916-17, a total area of 1,037,087 acres became available for Crown leases, homestead farms, suburban holdings, additional holdings, etc. Of this area, 273 acres were made available for irrigation farms and allotments, and 29,876 acres were acquired under the Closer Settlement Promotion Act. In addition, 407,471 acres were made available for soldiers' settlement.

Area of State (exclusive of Lord Howe Island and Commonwealth Territory)—198,058,880 acres.

\* The figures for 1901 are up to the 31st December, while for the other years given they are up to the 30th June. † Inclusive of alienated and dedicated areas within Commonwealth Territory, and areas acquired for closer settlement and promotion of same. § Now included under Homestead grants.

3. **Victoria.**—The total area of the State of Victoria is 56,245,760 acres, of which 24,345,425 acres, or about three-eighths, had been alienated absolutely up to the end of the year 1916; 8,278,904 acres, or about one-seventh, were in process of alienation under deferred payments; and 12,433,959 acres were occupied under leases and licenses (exclusive of leases and licenses held under the Mines Department). The following table shews the areas alienated and in process of alienation, together with the areas reserved, leased, and available for occupation at the end of the year 1901 and from 1912 to 1916:—

**VICTORIA.—ALIENATION AND OCCUPATION OF CROWN LANDS,**

1901 AND 1912-16.

Total area of State—56,245,760 acres.

\* Not available. † Including leases and licenses held under the Mines Department, which are not available. ‡ This area is also included with land alienated.

Crown lands in Victoria include roads, 1,732,720 acres; water reserves, 316,204 acres; agricultural colleges, etc., 85,107 acres; State forests and timber reserves (now under Forests Act 1907), 3,886,546 acres; State forests and timber reserves under Land Acts, 227,078 acres; reserves in the Mallee, 397,881 acres; unsold land in towns, etc., 2,685,642 acres; and other reserves, 305,584 acres.

4. **Queensland.**—The total area of this State is 429,120,000 acres, of which, on the 31st December, 1916, 16,570,590 acres, or about one twenty-sixth, were alienated absolutely; 10,566,829 acres, or about one-fortieth, were in process of alienation; 326,192,702, or about three-quarters, were occupied under leases and licenses; roads, reserves, etc., occupied 15,857,492 acres, the remaining 59,932,387 acres being unoccupied. From 1901 to 1916 the area alienated absolutely increased by 3,037,122 acres or 22 per cent., and the area in process of alienation by 7,775,165 acres, or 278 per cent.

The following table shews the area alienated absolutely, the area in process of alienation, and the area held under various forms of lease and license at the end of the year 1901 and from 1912 to 1916:—

## QUEENSLAND.—ALIENATION AND OCCUPATION OF CROWN LANDS,

1901 AND 1912-16.

Total area of State—429,120,000 acres.

The area open for selection (as distinguished from occupation for purely pastoral or special purposes) under every mode at the beginning of the year 1916 was 11,864,241 acres, and the area opened during the year was 8,440,778 acres, while the area withdrawn was 1,969,975 acres. The area selected was 4,903,196 acres, and the area remaining open at the end of the year was 13,431,848 acres. The number of grazing selections was 359 as against 497 in the previous year, and their gross area 4,477,748 acres, as against 6,446,353 acres.

5. *South Australia.*—The area of the State of South Australia is 243,244,800 acres. In this State, at the end of the year 1916, there were 10,674,208 acres, or about one twenty-fourth, alienated absolutely; 3,039,292 acres, or about one-eightieth, were in process of alienation; 114,171,206 acres, or about one-half, were occupied under leases and licenses; while the remaining 115,360,094 acres were unoccupied. The subjoined table shews for South Australia the area of land alienated absolutely, and in process of alienation under deferred payments, and the area held under different forms of leases:—

Total area of State—243,244,800 acres.

\* Exclusive of miners' rights.

**6. Western Australia.**—The total area of Western Australia is 624,588,800 acres, of which on the 30th June, 1917, 8,276,084 acres, or about one seventy-fifth part, were alienated absolutely; 13,284,721 acres, or about one forty-seventh part, were in process of alienation; while 192,735,253 acres, or nearly one-third, were occupied under leases and licenses issued either by the Lands or the Mines Departments. The remaining 410,292,742 acres, or about two-thirds, were unoccupied.

The following table shews the areas alienated absolutely and conditionally, and the areas held under leases and licenses at the end of the year 1901 and on 30th June, 1913 to 1917 :—

Total area of Northern Territory—335,116,800 acres.

\* Including Aboriginal and other reserves, and Mission stations.

## § 12. Classification of Holdings according to Size.

1. **General.**—The classification of holdings according to their area is of interest chiefly in relation to the efforts made by the several States in recent years to promote settlement on the land on blocks of suitable size, especially by means of the Closer Settlement Acts. Returns shewing such a classification are not available for Queensland and the Northern Territory.

The following table gives particulars of the number of holdings in area series, as returned to the collectors of agricultural and pastoral statistics, for all the States, excepting Queensland, to the latest available date. The figures necessarily fall short of those given in preceding tables relating to total alienations.

**CLASSIFICATION OF HOLDINGS (ONE ACRE AND OVER) IN AREA SERIES,

### § 13. The Progress of Land Settlement, 1901 to 1916.

1. **Recent Progress.**—The progress of settlement and the growth of land alienation in the States of the Commonwealth under recent legislation is seen in the subjoined statement, which shews concisely the condition of the public estate in each State and in the Commonwealth, at the end of 1901 and of each year from 1912 to 1916 inclusive. The effect of the land laws during that period has been generally to diminish the number of large holdings, at the same time decreasing the area held under lease, while both the area alienated and the area in process of alienation have increased. As leases of large areas fall in or are otherwise terminated they are in many cases not renewed, but the land is then cut up for the purpose of settlement under systems of deferred payment; the

State Governments, also, have in many cases acquired by repurchase considerable areas under the provisions of the various Closer Settlement Acts. Further, greater facilities have been granted to the working classes to acquire possession of the soil, and special inducements have been offered to *bond fide* settlers by the introduction of new forms of tenure on easy terms and conditions.

From 1901 to 1916 the area alienated absolutely in the whole Commonwealth increased by 29,528,583 acres, or 39 per cent.; the area in process of alienation increased by 20,761,769 acres, or 59 per cent.; the area leased by 159,939,966 acres, or 22 per cent.; while the area unoccupied decreased by 210,230,318 acres, or 20 per cent.

### TOTAL AREA ALIENATED, IN PROCESS OF ALIENATION, HELD UNDER LEASE OR LICENSE AND UNOCCUPIED,

2. Diagram shewing Condition of Public Estate.—The following diagram shews the condition of the public estate in the Commonwealth at the end of the year 1916. The square itself represents the total area of the Commonwealth, while the relative areas of individual States are shewn by the vertical rectangles. The areas alienated absolutely, in process of alienation under systems of deferred payments, and the areas held under leases or licenses, are designated by the differently-shaded areas as described in the reference given below the diagram, while the areas unoccupied are left unshaded:—

3. **Federal Territory.** The following particulars relate to the tenures of land within the Federal Capital Territory at the end of the year 1917:—

**FEDERAL CAPITAL TERRITORY, TENURES OF LAND, 1917.**

Total Area of Territory					583,660

## SECTION VII.

## PASTORAL PRODUCTION.

## § 1. Initiation and Growth of Pastoral Industry.

1. **Early Statistics.**—In earlier issues of the Year Book will be found a brief reference to the pastoral industry in Australia prior to the year 1860. (See Year Book No. 6, page 330.)

2. **Subsequent Statistics.**—While the statistical records of live stock in Australia prior to the year 1860 are somewhat defective, from that year onwards fairly complete particulars are available in most of the States. At the present time, statistics of live stock are collected annually in all the States, principally through the agency of the police, but in the years 1885 to 1888 inclusive, and 1893 to 1895 inclusive, these particulars were not collected in South Australia, and similar gaps occur in the Victorian records for the periods 1895 to 1899 inclusive, and 1901 to 1903. In order to obtain totals for the Commonwealth for these years the missing numbers have been supplied by interpolation. The results so obtained probably differ but slightly from the actual numbers for the respective years.

3. **Increase in Numbers.**—Particulars concerning the numbers of each of the principal kinds of live stock in the Commonwealth at quinquennial intervals from 1860 to 1910, and thence onwards in single years, are given in the following table, and are shewn continuously in the graphs hereinafter.

During the fifty-six years covered by the table the live stock of the Commonwealth increased considerably, horses by 465 per cent., cattle 164 per cent., sheep 281 per cent., and pigs 187 per cent. The average annual increases which these aggregates represent are as follows:—Horses, 3.14 per cent.; cattle, 1.75 per cent.; sheep, 2.42 per cent.; and pigs, 1.90 per cent.

## COMMONWEALTH LIVE STOCK, 1860 to 1916.

4. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of the droughts which have from time to time left their impress on the pastoral history of Australia. These were in evidence in 1869, 1877, 1884, 1895 and subsequent years, 1902, to some extent in 1908, and in a severer form during the earlier half of 1912, and again during 1914 and 1915. The falling-off in the number of sheep in 1915 was 9,343,145, of cattle 1,120,157, of horses 144,252, and of pigs 108,754, being 11.91, 10.14, 5.72 and 12.61 per cent. respectively. The number of horses for the year 1913 was the highest ever recorded in the Commonwealth. The winter of 1913 was dry over Southern Australia, though the crops subsequently recovered under the influence of fine spring rains, but in 1914 and 1915, very pronounced drought conditions developed—enveloping the whole of sub-tropical Australia (except the New South Wales coast) during 1914, and all the Central and North-eastern parts of the continent in 1915. Throughout many parts of Western Australia, South Australia, the Riverina, Victoria, and Tasmania, the year 1914 was the driest on record, and similarly throughout a large part of Queensland and North-eastern New South Wales, 1915 was the worst year ever experienced. The result was a general failure of the crops throughout the wheat belt in 1914, heavy stock losses, the failure of the sugar crops of the East Coast and of a large proportion of the cereal crops on the Downs in Queensland.

The extraordinary recuperative power of Australia is reflected in the large increases in the numbers of stock which occurred in the good seasons supervening on the various droughts. Thus, in the nine years from 1902 to 1911, horses increased by 754,426, cattle by 4,766,212, and sheep by 39,335,174, the corresponding increases per cent. per annum being horses 4.57 per cent., cattle 5.90 per cent., and sheep 6.30 per cent.

The years in which the numbers of live stock attained their maxima are as follows:—Horses, 1913, 2,521,983; cattle, 1894, 12,311,617; sheep, 1891, 106,421,068; and pigs, 1911, 1,110,721.

5. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of the Commonwealth has varied during the past fifty-six years in the manner shown in the succeeding table:—

NUMBER OF LIVE STOCK PER HEAD OF POPULATION, 1860 to 1916.

Year.	Horses.	Cattle.	Sheep.	Pigs.	Year.	Horses.	Cattle.	Sheep.	Pigs.
1860	0.38	3.45	17.58	0.31	1905	0.42	2.11	18.48	0.25
1865	0.41	2.68	21.25	0.25	1910	0.49	2.65	20.80	0.23
1870	0.43	2.60	25.24	0.33	1911	0.50	2.59	20.36	0.24
1875	0.44	3.37	27.99	0.29	1912	0.51	2.45	17.59	0.18
1880	0.48	3.37	27.87	0.37	1913	0.52	2.36	17.46	0.16
1885	0.42	2.75	25.05	0.28	1914	0.51	2.24	15.91	0.17
1890	0.48	3.27	31.06	0.28	1915	0.48	2.01	14.04	0.15
1895	0.48	3.36	25.93	0.24	1916	0.50	2.15	15.73	0.21
1900	0.43	2.29	18.75	0.25					

Considered in relation to population, the live stock attained its maximum in the period 1890-5, and its minimum in the year 1902. During the period under review, the number of horses varied but slightly in proportion to population, the range being from 0.38 to 0.52 per head. In the case of cattle, the limits of variation were 1.82 and 3.45; sheep, 13.85 and 31.06; and pigs, 0.15 and 0.37.

6. **Live Stock in Relation to Area.**—The numbers of live stock per square mile in the several States and Territories of the Commonwealth are given in the following table:—

## NUMBER OF LIVE STOCK PER SQUARE MILE.

States and Territories.	Date.	Horses.	Cattle.	Sheep.	Pigs.
New South Wales ...	30th June, 1917...	2.37	8.91	116.62	1.16
Victoria ...	1st March, 1917...	5.85	13.37	143.10	2.90
Queensland ...	31st Dec., 1916 ...	1.04	7.11	23.15	0.19
South Australia ...	30th June, 1917...	0.63	0.76	13.40	0.31
Western Australia ...	31st Dec., 1916 ...	0.17	0.89	5.67	0.09
Tasmania ...	1st March, 1917...	1.63	6.84	64.95	2.30
Northern Territory...	31st Dec., 1916 ...	0.04	0.80	0.09	0.001
Federal Territory ...	30th June, 1917...	1.55	8.76	117.17	0.28
Commonwealth ...	1916-17 ...	0.82	3.52	25.77	0.34

7. **Minor Classes of Live Stock.**—The numbers of minor classes of live stock returned for 1916-17, were as follows:—Goats, 224,401; camels, 11,904; mules and donkeys, 11,713; and ostriches, 1194. Of these, goats were most numerous in Queensland, camels, mules, and donkeys in Western Australia, and ostriches in South Australia. In the raising of goats, considerable attention has in recent years been devoted to the angora goat and its product—mohair, and over 20,000 angora goats are included in the total of 224,401 goats shewn above. Of these, 7360 were in New South Wales, and 4462 in Queensland, while the quantity of mohair produced in the latter State in 1916 was set down at 4012 lbs., and the number of skins placed on the market was returned as 587.

8. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of the Commonwealth exceeded the imports for the years 1912 to 1916-17 are as follows:—

**QUANTITIES OF NET EXPORTS OF PRINCIPAL PASTORAL PRODUCTS  
OF THE COMMONWEALTH, 1912 to 1916-17.**

## § 2. Horses.

1. **Suitability of Australia for Horse-breeding.**—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognised. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages were utilised to the fullest extent, all classes of horses being bred. As a consequence of this combination of advantages, the Australian horse, whether of the heavy draught, medium weight, or light saddle and carriage variety, compares more than favourably with the product of other lands. The Australian horse has been found suitable for the army in India, and large numbers are obtained annually for remount purposes.

2. **Distribution throughout the Commonwealth.**—As regards numbers, the State of New South Wales, the earliest settled of the group, established a lead, which it retained up to the end of 1913. For some years past Queensland has made rapid progress in this regard, and in 1914 there were 742,159 horses in that State, as compared with 731,735 in New South Wales, and 552,053 in Victoria. The 1915 and 1916 figures, however, shew that New South Wales has regained the lead. Particulars for the several States for a series of years are as follows:—

**NUMBER OF HORSES IN STATES, TERRITORIES, AND COMMONWEALTH,  
1860 to 1916.**

Year.	N.S.W.	Victoria. ‡	Q'sland.	S. Aust.	W. Aust.	Tas. ‡	N. T.	Fed. Terr.	Common- wealth.

\* Statistics not collected prior to 1880. ‡ 1st March year following † 30th June year following.

3. **Proportion in the Several States and Territories.**—The percentages of the numbers of horses in the several States and Territories on the total for the Commonwealth for 1901 and the past five years are as follows:—

**PERCENTAGE OF HORSES IN EACH STATE AND TERRITORY ON THE TOTAL  
FOR COMMONWEALTH, 1901 and 1912 to 1916.**

Year.	N.S.W.	Victoria.	Q'sland.	S. Aust.	W. Aust.	Tas.	North'n Terr.	Fed. Terr.	Common- wealth.
	%	%	%	%	%	%	%	%	%
1901...	30.03	23.90	28.52	10.20	4.55	2.00	0.80	...	100.00
1912...	29.69	22.03	28.01	11.48	6.13	1.83	0.77	0.06	100.00
1913...	29.52	22.30	28.01	11.25	6.21	1.74	0.90	0.07	100.00
1914...	29.02	21.90	29.44	10.62	6.41	1.68	0.87	0.06	100.00
1915...	30.20	20.77	28.89	10.65	6.86	1.74	0.84	0.05	100.00
1916...	30.05	21.11	28.62	10.56	6.96	1.75	0.89	0.06	100.00

During the period under review, the proportion in Western Australia has increased, that in Victoria has diminished, while in the case of the other States the proportion in 1916 was practically identical with that in 1901.

4. **Oversea Export Trade in Horses.**—Australia's export trade in horses is fairly considerable, though somewhat fluctuating. During the past five years it has varied in number between 8,562 for the year 1913 and 24,107 in 1914-15, and in value between £163,730 in the former and £459,978 during the latter year. The total number of horses exported during the five years, exclusive of those shipped for military purposes, amounted to 73,598, an average of 14,720 per annum. The total value of the exports for the period was £1,433,260, or £286,652 per annum. The average export value per head for the period was £19 9s. 6d. The numbers exported to the principal countries concerned in this trade are as follows:—

**NUMBER AND DESTINATION OF HORSES EXPORTED FROM THE COMMONWEALTH,  
1912 to 1916-17.**

\* Exclusive of shipment for military purposes.

Consequent on the greater demand for remounts for the Indian Army, a large increase took place in the number of horses exported to that country during the last three years. Of the 2659 horses exported to "Other Countries" during 1914-15—2270, valued at £50,075, were shipped to France. In addition to the exports shewn in the above tables, there were 36,966 horses, valued at £743,940, shipped from the Commonwealth for military purposes from the commencement of the war to 30th June, 1917.

The number of horses imported into the Commonwealth is comparatively small, consisting mainly of valuable animals introduced for breeding purposes, and imported principally from New Zealand and the United Kingdom. The average value per head of the horses imported during the last five years was £122 10s. 2d., as compared with £19 9s. 6d. per head for the exports for the same period. The average number imported per annum was, however, only 862, and the average annual value £105,600. The following table furnishes a comparison of imports and exports of horses during 1901 and each of the five years 1912 to 1916-17:—

**COMMONWEALTH IMPORTS AND EXPORTS OF HORSES, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1901 ...	246	19,601	32,474	438,248	32,228	418,647

1. Austria 1910, Hungary 1913, Croatia-Slavonia 1911, Bosnia-Herzegovina 1910. 2. Also 38,000 mules and 33,000 asses. 3. Including Poland, Caucasus, and Siberia. 4. Also 4,639,000 mules. 5. Exclusive of army horses. 6. Also 584,000 mules. 7. Also 88,000 mules. 8. Also 22,000 mules and 632,000 asses. 9. Excludes invaded area. 10. Also 86,000 mules and 1,501,000 asses. 11. Also 388,000 mules and 860,000 asses. 12. Also 94,000 mules and 337,000 asses.

6. **Relation to Population.**—In proportion to population, horses are much more numerous in the Northern Territory than in any other of the principal divisions of the Commonwealth. Queensland is next in order, while Tasmania has the smallest number of horses per head. In all cases the number of horses per head of population was somewhat higher in 1916 than in 1901. Particulars for 1901 and the past five years are as follows :—

NUMBER OF HORSES PER HEAD OF POPULATION, 1901 AND 1912 to 1916.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Federal Terr.	C'with.

### § 3. Cattle.

1. **Purposes for which Raised.**—In all the States of the Commonwealth, cattle raising is carried out on a more or less extensive scale, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry in the Commonwealth led to a considerable increase in numbers and improvement in quality of the dairy herds of Victoria, New South Wales, and Southern Queensland in particular, the sub-tropical portion of Australia being apparently the best adapted to this industry. On the other hand, by far the finest specimens of beef-producing cattle are those raised in the tropical districts of the Commonwealth, *i.e.*, in the northern parts of Queensland, in the Northern Territory, and in the Kimberley districts in the north of Western Australia.

2. **Distribution throughout Commonwealth.**—Until 1880 New South Wales occupied the leading position in the Commonwealth group as a cattle-raising State, but in that year Queensland forged ahead and obtained a lead which it has since maintained. The extent of this lead has, however, varied considerably, owing principally to the effects produced by the tick fever and droughts, from both of which causes the Queensland herds suffered more severely than those of the other States. In fact, during the period from 1894, when the number of cattle in Queensland attained its maximum of rather more than 7,000,000, to 1903, when the number recorded was less than 2,500,000, an uninterrupted decline was experienced. During the eleven years ended 1914, however, a rapid improvement took place, and the total reached on 31st December, 1914, was over 5,450,000. Owing to drought conditions the number at the end of 1915 had fallen to 4,780,893, with a further decline to 4,765,657 at the end of 1916.

The numbers of cattle in the several States and the Territories at quinquennial intervals from 1860 to 1910 and for each subsequent year are as follows :—

**NUMBER OF CATTLE IN STATES, TERRITORIES, AND COMMONWEALTH,  
1860 to 1916.**

Year.	N.S.W.	Victoria. †	Q'land.	S. Aust.	W. Aust.	Tas. ‡	N.T.	Fed. Ter.	C'wealth.

\* Statistics not collected prior to 1880. † 30th June year following.

‡ 1st March year following.

3. **Proportion in each State.**—During the period elapsing between 1901 and 1916 the proportion of cattle in the several States and the Northern Territory has varied considerably, as shewn hereunder :—

**PERCENTAGE OF CATTLE IN EACH STATE AND TERRITORY ON TOTAL FOR  
COMMONWEALTH, 1901 and 1912 to 1916.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Federal Territory.	C'wealth.
	%	%	%	%	%	%	%	%	%
1901 ...	24.11	19.12	44.43	2.65	4.69	1.99	3.01	...	100.00
1912 ...	26.20	13.03	45.01	3.31	6.97	1.92	3.50	0.06	100.00
1913 ...	24.51	13.31	46.34	3.07	7.27	1.79	3.64	0.07	100.00
1914 ...	22.37	12.33	49.37	2.72	7.82	1.60	3.75	0.04	100.00
1915 ...	24.17	10.51	48.14	2.28	8.27	1.71	4.87	0.05	100.00
1916 ...	26.37	11.23	45.57	2.76	8.26	1.71	4.02	0.08	100.00

A comparison of the positions of the several States in 1901 and 1916 shews that, while Victoria's proportion of the Commonwealth herds suffered considerable diminution, and those for Tasmania a falling-off to a slight extent, fairly large increases have taken place in Western Australia. New South Wales, Queensland and the Northern Territory also shewed an upward tendency.

4. **Imports and Exports of Cattle.**—Although the various products of the cattle-raising industry bulk largely in the export trade of the Commonwealth, the export of live cattle from Australia has never been considerable. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for breeding. Details are as follows :—

**COMMONWEALTH IMPORTS AND EXPORTS OF CATTLE, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value	No.	Value.
		£		£		£
1901 ...	114	3,591	2,413	22,088	2,299	18,497
1912 ...	33	1,502	16,083	65,735	16,050	64,233
1913 ...	57	5,572	14,605	55,801	14,548	50,229
1914-15 ...	221	21,090	10,342	40,648	10,121	19,558
1915-16 ...	440	19,169	5,857	29,258	5,417	10,089
1916-17 ...	234	14,254	2,977	18,836	2,743	4,582

The average value of the cattle imported into the Commonwealth during the last five years was £62 10s. 6d. per head, while the average value of the cattle exported during the same period was £4 4s. 4d. As stated previously, the imported cattle were principally for stud purposes.

The comparatively large exports for the years 1912 and 1913 were due to shipments to Java and Philippine Islands valued at £42,230 and £61,766 respectively. The bulk of these cattle were exported from Western Australia.

**5. Cattle Slaughtered.**—Complete returns of the number of cattle slaughtered annually in the Commonwealth are not obtainable, as these particulars were collected in Tasmania prior to 1911 for Hobart and Launceston only, and were collected in South Australia for the first time in 1908 in respect of the year 1907. Estimates for these States have, however, been made, and the results are included in the following table:—

**CATTLE (INCLUDING CALVES) SLAUGHTERED IN STATES, TERRITORIES AND  
COMMONWEALTH, 1901 and 1912 to 1916.**

\* Estimated. † Partly estimated prior to 1913. ‡ Not available. § 1910 figures, those for 1911, 1912 and 1913 not available. || For year ended 30th June of year following.

**6. Export of Beef Preserved by Cold Process.**—A large export trade in beef preserved by cold process is carried on by the Commonwealth, mainly with the United Kingdom, the Philippine Islands, and the Union of South Africa. The quantities so exported during the five years 1912 to 1916-17 are as follows:—

**QUANTITY OF BEEF PRESERVED BY COLD PROCESS EXPORTED FROM THE  
COMMONWEALTH, 1912 to 1916-17.**

During the five years under review, the largest of Australia's customers for beef preserved by cold process has been the United Kingdom, while the second largest customer has been the Philippine Islands; the United States and the Union of South Africa ranked next in order of importance. Consequent on the war over 97½ per cent. was absorbed by the United Kingdom during the last two years, while most of the balance was shipped to the Straits Settlements and Philippine Islands. The exporting States during 1916-17 were:—Queensland, 226,255,373 lbs., valued at £4,587,296; New South Wales, 10,453,222 lbs., valued at £227,147; Victoria, 4,895,505 lbs., valued at £121,329; and South Australia, 477,586 lbs., valued at £11,298.

**7. Comparison with other Countries.**—In the following comparison of the herds of Australia with those of some of the principal cattle-raising countries of the world, the latest available figures have been inserted in each case :—

## NUMBER OF CATTLE IN VARIOUS COUNTRIES.

Country.	Date.	No. of Cattle. (000 omitted.)	Country.	Date.	No. of Cattle. (000 omitted.)

1. Including buffaloes. 2. Austria 1910, Hungary 1913, Croatia-Slavonia 1911, and Bosnia-Herzegovina 1911. 3. Including Poland, Caucasus and Siberia. 4. Excludes invaded area.

8. **Relation to Population.**—The number of cattle per head of population differs considerably in the several States, and is also subject to marked variation from year to year in the same State. Particulars for 1901 and the past five years are as follows:—

## NUMBER OF CATTLE PER HEAD OF POPULATION, 1901 and 1912 to 1916.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Northern Territory.	Fed. Terr.	C'wealth.
1901 ...	1.49	1.34	7.44	0.63	2.06	0.96	54.68	...	2.22
1912 ...	1.71	1.09	8.19	0.89	2.63	1.13	116.71	3.66	2.45
1913 ...	1.54	1.08	8.06	0.82	2.60	1.02	113.74	3.84	2.36
1914 ...	1.33	0.95	8.06	0.68	2.67	0.88	104.34	3.57	2.24
1915 ...	1.29	0.74	7.04	0.52	2.58	0.84	106.06	2.30	2.01
1916 ...	1.48	0.84	7.12	0.67	2.80	0.90	88.18	3.70	2.15

For the Commonwealth as a whole the ratio of cattle to population is 3 per cent. less for 1916 than for 1901. An excess of the 1916 figures over those for 1901 is in evidence only in Western Australia, South Australia, and the Northern Territory, being most marked in the case of the latter. In all the other States the ratios for 1916, though shewing an increase over the previous year, are below those of 1901.

## § 4. Sheep.

1. **The Founding of the Commonwealth Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool was, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and though

it would appear that the introduction of the Merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

**2. Distribution throughout Commonwealth.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of the mother State, New South Wales has maintained amongst the Commonwealth group the lead in sheep production which naturally attached to it as the portion of the Commonwealth in which settlement was first effected. From 1878 to 1901, the number of sheep in New South Wales represented more than half the total for the Commonwealth. In subsequent years it has rarely fallen much below that proportion and has on several occasions exceeded it.

The number of sheep in the several States and Territories at quinquennial intervals from 1860 to 1910, and for each year onwards to 1916, is as follows:—

**NUMBER OF SHEEP IN STATES, TERRITORIES, AND COMMONWEALTH  
1860 to 1916.**

Year.	New South Wales.	Victoria. ‡	Queens- land.	South Aust.	Western Aust.	Tas- mania. ‡	Northern Territory	Federal Territory.	Total C'wealth.

\* Statistics not collected prior to 1880. † 30th June of year following.

‡ 1st March year following.

**3. Proportion in the Several States and Territories.**—Particulars concerning the relative positions of the several States and Territories with respect to the total flocks of Australia during the years 1901 and 1912 to 1916, and the variations in such positions which have taken place during those years are as hereunder:—

**PERCENTAGE OF SHEEP IN EACH STATE AND TERRITORY ON TOTAL FOR  
COMMONWEALTH, 1901 and 1912 to 1916.**

Year.	N.S.W.	Vic.	Q'sland.	S. Aust.	W. Aus.	Tas.	N.T.	Fed. Terr.	C'wealth.	
	%	%	%	%	%	%	%	%	%	
1901	...	58.10	14.82	13.92	6.95	3.65	2.49	0.07	...	100.00
1912	...	46.67	14.28	24.39	6.58	5.52	2.24	0.09	0.23	100.00
1913	...	46.68	14.24	25.61	5.96	5.20	2.05	0.08	0.18	100.00
1914	...	41.83	15.33	29.43	5.35	5.67	2.13	0.09	0.17	100.00
1915	...	46.92	15.23	23.03	5.30	6.94	2.35	0.08	0.15	100.00
1916	...	47.07	16.41	20.25	6.64	7.21	2.22	0.06	0.14	100.00

During the period, the proportion of total Commonwealth flocks declined considerably in the case of New South Wales, and in a less marked degree in South Australia and Tasmania, while in the cases of Queensland, Western Australia and Victoria, substantial advances in proportion were experienced.

4. **Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively small importance. The principal countries to which such exports have been consigned during recent years are the Union of South Africa, Straits Settlements, and Papua, Western Australia being the principal exporting State. The following are the particulars of the imports and exports for the years 1901 and 1912 to 1916-17 :—

**COMMONWEALTH IMPORTS AND EXPORTS OF SHEEP, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.

\* Estimated. † Partly estimated. ‡ Figures for 1910; those for 1911, 1912, and 1913 not available. ¶ Year ended 30th June year following.

6. **Exports of Mutton and Lamb Preserved by Cold Process.**—Australia's export trade in mutton and lamb preserved by cold process has, in recent years, advanced rapidly. In 1903 the value of exports was £192,114, while seven years afterwards, in 1910, the value amounted to no less a sum than £2,161,513; the average for the two years, 1913 and 1914-15, was £3,155,190, while, consequent on the recent drought and war conditions, the value of the 1915-16 exports fell to £769,752, and to £1,540,572 in 1916-17. In all the States considerable attention is now being paid to the breeding of a class of sheep that will best meet the requirements of consumers. Crosses between the Merino and the Lincoln, or between the Merino and the Leicester breeds, have proved exceedingly valuable, as they furnish both a good quality of wool and an excellent carcase for export purposes. The breeding of Shropshire and Southdown sheep with a view to combining meat production with that of wool is also on the increase. Special attention is being paid to the raising of lambs, as it has become widely recognised that, with suitable breeds, the export trade in lambs is very profitable.

Australia's principal customer in this trade is the United Kingdom, which has absorbed 95 per cent. of the total quantity exported from the Commonwealth during the past

five years. As in the case of frozen beef, the bulk of the mutton and lamb exported during the last two years went to the United Kingdom. It amounted to 96.7 per cent. of the total, while the balance was shipped mainly to Straits Settlements, Ceylon, and Hong Kong.

**7. Comparison with other Countries.**—As regards the size of its flocks, and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep-raising countries of the world. From estimates published in the Year Book of the United States Department of Agriculture it would appear that the

approximate number of sheep in the world is in the neighbourhood of 614,000,000, to which total Australia contributes about 12½ per cent. The following comparison taken mainly from the same source, gives the latest available figures relative to the number of sheep in the principal wool-producing countries:—

#### NUMBER OF SHEEP IN VARIOUS COUNTRIES.

Country.	Date.	No. of Sheep. (000 omitted)	Country.	Date.	No. of Sheep. (000 omitted)
Argentine Republic ...	1913	81,485	Algeria ...	1912	8,338

1. Including goats. 2. Including Poland, Caucasus, and Siberia. 3. Austria, Croatia-Slavonia and Bosnia-Herzegovina 1910; Hungary 1913. 4. Exclusive of invaded area.

8. **Relation to Population.**—The relation of the flocks of the several States and Territories to the populations at the end of the year 1901 and from 1912 to 1916 is as follows:—

#### NUMBER OF SHEEP PER HEAD OF POPULATION, 1901 and 1912 to 1916.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Federal Ter.	C'wealth.
1901	30.43	8.82	19.80	13.95	13.56	10.23	10.34	...	18.83
1912	21.86	8.61	31.91	12.74	15.02	9.45	21.82	97.24	17.59
1913	21.67	8.58	33.00	11.53	13.79	8.65	18.28	74.89	17.46
1914	17.66	8.42	34.18	9.53	13.79	8.32	17.66	69.42	15.91
1915	17.42	7.43	23.50	8.88	15.11	8.08	12.67	41.64	14.04
1916	19.42	8.99	23.19	11.77	17.91	8.52	9.97	49.55	15.73

A comparison of the ratios of sheep to population for 1916 with those for 1901 discloses increases in the cases of Western Australia, Queensland and Victoria, and decreases in the other States and the Northern Territory.

### § 5. Wool.

1. **Importance of Wool Production.**—The chief contributing factor to the pastoral wealth of Australia is the production of wool, the value of the output for the season ended 30th June, 1917, being about £35,964,000. The bulk of the wool produced in the Commonwealth is exported, but with the increased activity of the local woollen mills there has, in recent years, been an increasing quantity used in Australia, although even now the quantity so used represents only 3½ per cent. of the whole clip.

GRAPHS SHEWING NUMBER OF HORSES, CATTLE, SHEEP, AND PIGS IN THE COMMONWEALTH FROM 1860 TO 1916.

(See pages 305 *et seq.*)

**EXPLANATION OF GRAPH.**—The base of each small square represents an interval of one year. The totals of the sheep, cattle, horses, and pigs for the Commonwealth are indicated by the several curves or graphs, the vertical side of a small square representing 2,000,000 in the case of sheep; 200,000 for cattle; 50,000 for horses; 40,000 for pigs.

GRAPHS SHEWING THE PRODUCTION OF BUTTER AND CHEESE, AND BACON AND HAM, IN THE COMMONWEALTH, FROM 1896 TO 1916.

(See pages 339 and 402.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each small rectangle denotes in the case of butter 10,000,000 lbs.; in the case of bacon and ham, 4,000,000 lbs.; and in the case of cheese 3,000,000 lbs.

GRAPHS SHEWING THE QUANTITY AND VALUE OF NET EXPORTS OF BUTTER FROM THE COMMONWEALTH, FROM 1901 TO 1916.

(See page 400.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each small rectangle represents 5,000,000 lbs. in weight, or £1,000,000 in value.

**2. Greasy and Scoured Wool.**—For the purpose of comparing the clips of the several States or of the Commonwealth as a whole for a series of years, it is convenient to have the total production expressed in terms of greasy wool.

The quantity of Australian wool scoured and washed before export is, on the average, about 20 per cent. of the total clip. The loss of weight in scouring varies largely with season, locality, breed, and condition. It seems preferable to express "scoured and washed" wool in terms of "greasy" rather than *vice versa*, since the absolute error arising from uncertainty as to average loss of weight has thus the less effect.

In the following tables relative to the production of wool, "scoured and washed" wool has been converted into the estimated equivalent amount of "greasy" wool, on the assumption that two pounds of "greasy" wool are on the average required to produce one pound of "scoured and washed" wool.

**3. Total Production.**—The estimated production of wool in the several States, formerly based on the Customs returns, being no longer available from that source, an effort has been made to arrive at approximate figures from data collected by the State Statisticians from growers and fellmongers, etc. Particulars for years prior to 1910 will be found in earlier issues (see Year Book No. 6, page 346). The following table gives the estimates obtained in reference to the five seasons ended 30th June, 1913 to 1917:—

**ESTIMATED QUANTITY OF WOOL AS IN THE GREASE, SHORN, FELLMONGERED  
OR ON SKINS SHIPPED DURING THE SEASONS ENDED 30th JUNE, 1913 to 1917.**

State.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

Northern Territory†	450,000	400,000	400,000	350,000	350,000
Commonwealth	648,851,913	711,134,203	642,734,725	550,604,675	547,702,295

\* Including Federal Territory. † Approximate figures.

It is to be noted that a shortage has apparently occurred in the collection of these statistics, the estimates falling considerably below the approximate totals obtained from oversea shipments of wool and skins, together with the quantity used in local manufactories. The Commonwealth total so obtained represented 668,667,078 lbs. for the season 1912-13, and 768,586,806 lbs. for 1913-14. The abnormal conditions of wool shipments obtaining during the last three seasons do not admit of any similar comparison with the estimated production.

The weight and value of wool per sheep shorn in the past five seasons is shewn in the following table:—

**ESTIMATED WEIGHT AND VALUE OF WOOL PER SHEEP SHORN FOR THE  
SEASONS ENDED 30th JUNE, 1913 to 1917.**

Season ended 30th June.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'wealth.

\* Year ended 30th June, year following.

**5. Bounties on Combed Wool or Tops Exported.**—Under the Bounties Act 1907, bounties were payable on combed wool or tops exported from the Commonwealth, provided they were produced therein. The maximum amount to be paid might not exceed a total of £10,000 per annum; any unexpended sum might be carried forward and be available for the years following. For the three years commencing 1st January, 1909, the rate of bounty granted was 1½d. per lb., and for the two years commencing 1st January, 1912, 1d. per lb. was payable for all combed wool or tops produced; thenceforward to the end of 1915, 1d. per lb. was payable up to 1,000,000 lbs. to any one manufacturer during a year, and ¾d. per lb. in excess of that quantity. No bounties have been paid on combed wool or tops since 1915. During the year 1908-9, an amount of £326 was paid in bounties, in 1909-10, £4,933, in 1910-11, £8,522, in 1911-12, £16,898, in 1912-13, £13,061, in 1913-14, £12,706, in 1914-15, £7,727, and in 1915-16, £5,828. The quantities of wool on which these amounts were paid were 52,085; 789,216; 1,363,555; 3,122,244; 3,134,614; 3,068,170; 3,635,811 and 2,824,436 lbs. respectively.

Figures shewing the exports of wool tops for the years 1912 to 1916-17 inclusive will be found on the next page.

6. **Exports of Wool.**—During the two calendar years prior to the war, about 38 per cent. of the exports of wool from the Commonwealth was despatched to the United Kingdom, whereas the shipments for the same destination during the past three years have averaged over 66 per cent. The percentage for the past five years was just under 55 per cent. The other leading consignees were France, the United States of America, Japan, Italy, and, prior to the war, Germany and Belgium. The following table shews for the years 1912 to 1916-17 the quantities of "greasy" wool exported from the Commonwealth and the principal countries to which consigned :—

**COMMONWEALTH EXPORTS OF WOOL IN THE GREASE, 1912 to 1916-17.**

**7. Care needed in Comparing Clips.**—The Customs returns prior to 1914-15 do not furnish a reliable indication of increase or decrease in successive clips, since in each case they relate to the year ended 31st December, and include imports and exports of wool belonging to two distinct clips. A further defect in the comparability of successive clips is due to the circumstance that owing to climatic or other conditions, the time of shearing may be so far delayed that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth.

**8. Wool-producing Countries in Southern Hemisphere.**—The next table, compiled by one of the leading English wool-broking firms, furnishes interesting evidence of the relative importance of the three great wool-producing areas of the Southern Hemisphere. The figures given represent for the respective years the imports of wool into Europe and North America:—

**IMPORTS OF WOOL INTO EUROPE AND NORTH AMERICA, 1901 and 1912 to 1916.**

Year.	Australia and New Zealand.	Cape Colony.	River Plate.	Total.	Average Value of Australasian and Cape Bales.
	Bales.	Bales.	Bales.	Bales.	£
1901 ...	1,745,000	217,000	532,000	2,494,000	10.5
1912 ...	2,463,000	463,000	497,000	3,423,000	15.0
1913 ...	2,296,000	484,000	437,000	3,217,000	16.5
1914 ...	2,332,000	499,000	406,000	3,237,000	17.0
1915 ...	2,157,000	519,000	378,000	3,054,000	19.0
1916 ...	1,919,000	500,000	344,000	2,763,000	27.0

As the River Plate bale is much larger than the Australasian or Cape bale, a comparison of the number of bales is somewhat misleading. Allowing approximately for the difference in size of the several bales, it may be said that during the last five years the importations from Australia and New Zealand represent about 65 per cent. of the total.

**9. United Kingdom Importation of Wool.**—The quantity and value of wool imported into the United Kingdom during the year 1916 from the principal wool-producing countries, furnish evidence of the important position which the Commonwealth occupies in the supply of wool to the mother country. This is shewn in the following table:—

## IMPORTS OF WOOL INTO THE UNITED KINGDOM, 1916.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	lbs.	£		lbs.	£
Australia ...	241,722,083	15,448,409	Spain ...	223,891	38,113
New Zealand ...	157,852,797	10,927,874	China ...	418,637	30,339
Union of Sth. Africa ...	90,071,988	4,632,338	U.S. of America ...	289,213	26,850
British India ...	64,793,105	2,556,794	Iceland & Greenland ...	345,089	23,608
Argentine Republic ...	31,782,139	2,060,499	Portugal ...	349,440	13,674
Chile ...	8,115,218	483,224	Morocco ...	13,300	668
France ...	3,808,053	283,171	Canada ...	8,432	640
Egypt ...	5,418,775	258,946	British Posses-		
Falkland Islands ...	4,352,042	235,768	sions, n.e.i. ...	704,958	41,597
Peru ...	2,734,506	176,952	Foreign Coun-		
Turkey, Asiatic ...	2,703,700	143,216	tries, n.e.i. ...	752,774	32,492
Persia ...	1,607,450	84,579			
Uruguay ...	879,094	60,263	Total ...	618,946,684	37,560,014

It will be seen that of the total importations of wool into the United Kingdom, Australian wool represented 39 per cent. of quantity and over 41 per cent. of value, and New Zealand over 25 per cent. of quantity and over 29 per cent. of value. It is interesting to note that a total of 564,924,180 lbs., valued at £34,102,366, was received from British Possessions, being a little over 91 per cent. of the total weight imported, and slightly under 91 per cent. of the total value.

10. **The Wool Market.**—(i.) *General.* A résumé of Australian wool market conditions for the seasons 1907-8 to 1912-13 will be found in Year Book No. 7 (pages 296 and 297), for the season 1913-14 in Year Book No. 8 (page 297), and for the seasons 1914-15 and 1915-16 in Year Book No. 10 (page 310).

(ii.) *Purchase by British Government.* The purchase by the Imperial Government of the balance of the Australian wool clip, for the season 1916-17, was brought about as a result of war conditions. Owing to the demand for wool for British and Allied military clothing, it was decided to acquire the Australian clip at the flat rate of 15½d. per pound greasy—an increase of 55 per cent. on the prices ruling in the pre-war season. The control of the scheme was placed in the hands of a body called the Central Wool Committee, assisted by a committee in each State. These committees consisted of representatives of the wool growers, wool sellers, wool buyers, manufacturers and scourers or fellmongers. In addition the Central Wool Committee had a Government nominee, who acted as chairman. The broad policy laid down was that existing trade conditions were not to be disturbed; this meant that the carrying out of the details of the scheme was left to the trade itself. The wool was prepared, catalogued and shewn in the usual way, but instead of being sold by public auction, it was valued by duly appointed Government Wool Appraisers, according to a table of limits prepared by a body of experts acting as an Advisory Board to the Central Wool Committee. On appraisal the wool became the property of the Imperial Government, and was shipped as freight space became available, it being prescribed that the allotment of freight should be on the basis of the quantity of wool appraised in each State.

The Central Wool Committee, at the request of the Imperial Government, undertook to scour and re-class as much wool as would keep the local industries going to their full capacity.

(iii.) *Financial.* Funds received from the Imperial Government, were used to effect a payment of 90 per cent. of the appraised price to wool brokers for distribution to the growers within fourteen days from the final date of each series of appraisements.

The balance of 10 per cent. was withheld for possible adjustments. The money so retained was placed at interest, the earnings being added to the amount available for final distribution.

The average appraised price per pound having worked out less than the purchase price of 15½d. per pound, the money retained, amounting to £2,313,461, was paid over on the 14th August, 1917. A dividend—the first—of 10 per cent. was paid on 23rd October, 1917, amounting to £2,312,608. This represents slightly more than the payment in full of the flat rate of 15½d. per pound. A small final dividend will follow as soon as circumstances will permit.

(iv.) *Quantity and Value of Wool Appraised, 1916-17.* The quantity of wool appraised under the Imperial Government's purchase of a portion of the clip for the season 1916-17 amounted to 323,748,376 lbs. greasy, and 34,310,645 lbs. scoured, or equivalent to 392,369,666 lbs. of wool in the grease. The actual quantities finally distributed between the British Government and Commonwealth manufacturers are set out in the table hereunder. The average appraised price per pound of wool in the grease was 14.72d., the average for scoured wool was 22.86d. per pound, and the average of all wool—greasy, and scoured calculated as greasy—appraised under the scheme was 14.15d. per pound. The difference of this average and the 15½d. basis being equal to 9.5 per cent. on the average appraised price, there is every probability of the total dividends approximating 10 per cent. of appraised prices. The quantities of wool shipped and the distribution thereof, also wool stored for shipment, are not available for publication.

The figures given in the following table are not final, as slight adjustments may eventually be necessary, though the result cannot be materially affected:—

#### PARTICULARS OF PURCHASE OF BALANCE OF 1916-17 AUSTRALIAN WOOL CLIP.

	Total	1,128,288	8,869	120,307	358,059,021	23,134,609	25,340,541
Grand total in terms of Greasy	...	...	...	...	†392,369,666	...	25,340,541

\* Actually purchased by British Government after meeting requirements of Commonwealth manufacturers. † After crediting £25,937 to the British Government for slightly higher grade wools selected by the Commonwealth manufacturers. ‡ On the assumption that two pounds of greasy are required to produce one pound of scoured, this total is made up by:—British Government, 376,166,159 lbs.; woolen manufacturers, 10,207,834 lbs., and wool top manufacturers, 5,995,673 lbs. of wool as in the grease. § Paid for by woolen manufacturers at appraised value. || Paid for at the flat rate basis of 15½d. per pound greasy, tops to be sold at prices fixed by Army Contracts' Wool Committee, London, a certain percentage of profits to be returned to the Commonwealth Government by wool tops manufacturers. || At flat rate of 15½d. per pound.

(v.) *Purchase of 1917-18 Clip.* The organisation for the carrying out of the Imperial Government's purchase of the Australian wool clip 1917-18, was the same as for the balance of the season 1916-17.

With the exception of a few modifications necessary for the better working of the scheme, no alteration was made in the method of appraisement.

Ninety per cent. of the appraised value was paid to wool growers through the wool-selling brokers fourteen days after the completion of each series of appraisements, ten per cent. again being withheld for possible adjustments.

The total quantity of greasy wool appraised was 569,629,520 lbs., and scoured wool 47,340,403 lbs., a total of 616,969,923 lbs., equal to 664,310,326 lbs. greasy.

The average appraised price of the greasy wool is 14.98d. per lb., and of the scoured wool 25.62d. per lb.. The average appraised price on the greasy basis works out at 14.68d. per lb. The difference between this and the flat rate of 15½d. is equal to 5.59 per cent. of the appraised price.

The ten per cent. retention money, together with a dividend of five per cent., was distributed in all centres on the 21st August, 1918, involving a sum of approximately £6,094,713.

Grand total in terms of Greasy ...	...	...	...	...	664,310,326	...		42,903,375	4 5		

NOTE:—Woollen Manufacturers obtain their supplies at the appraised price, but Wool Top Manufacturers are required to pay the flat rate value for all their purchases.

Arrangements have now been concluded for the purchase by the Imperial Government of the Australian wool clip for the currency of the war, and for one full wool year thereafter.

(vi.) *Average Export Value.* The average values per lb. of Australian greasy wool according to the export returns for the past ten years have been as follows:—

#### EXPORT VALUE PER LB. OF AUSTRALIAN GREASY WOOL, 1907 to 1916-17.

Year ...	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914-15.	1915-16.	1916-17.
Average value per lb. ...	d. 10.73	d. 9.17	d. 9.35	d. 9.58	d. 8.87	d. 9.50	d. 9.70	d. 9.45	d. 11.86	d. 15.81

(vii.) *Exports of Wool from each State, and Quantity sold Locally.* Over 89 per cent. of the wool grown in Australia was sold in the local markets prior to export from the Commonwealth during 1915-16. Under normal conditions prior to the war buyers from the United Kingdom, France, Germany, and other European countries, also from America, Japan, China, and India, attended the sales conducted in Sydney, Melbourne, Geelong, Brisbane, Adelaide, Fremantle, Hobart, and Launceston.

The following table shews the number of bales of wool exported overseas from each State during the season ended 30th June, 1917, and bales appraised or sold for shipment, for use in local woollen mills and for scouring, etc. It must be noted that as considerable quantities of wool grown in some States are sold in or shipped from others, these figures therefore do not shew actual local production, but total overseas shipments and sales. The estimated quantity of wool produced in each State is given on page 323.

**EXPORTS OF WOOL TO PLACES OUTSIDE THE COMMONWEALTH, AND THE QUANTITY APPRAISED OR SOLD IN THE SEVERAL STATES, DURING THE SEASON ENDED 30th JUNE, 1917.**

State.	Oversea Exports.		Sales or Appraisements.	
	Bales.	%	Bales.	%
New South Wales ... ..	590,372	46.74	707,254	42.34
Victoria ... ..	277,394	21.96	467,034	27.96
Queensland ... ..	220,437	17.45	275,141	16.47
South Australia ... ..	100,052	7.92	136,513	8.17
Western Australia ... ..	58,256	4.61	51,350	3.08
Tasmania ... ..	16,625	1.32	32,989	1.98
Commonwealth ... ..	1,263,136	100.00	1,670,281	100.00

(viii.) *Exports of Wool from Commonwealth and Quantity sold Locally.* The number of bales of wool exported from the Commonwealth and sold at local sales prior to shipment, or taken for local use, during 1895, 1900, 1905, 1910, and the past seven seasons is shewn in the following table:—

**EXPORTS OF WOOL FROM THE COMMONWEALTH, AND THE QUANTITY SOLD LOCALLY FROM 1895 to 1917.**

Year ended 30th June.		Oversea Exports.	Local Sales.*	Ratio of Wool sold locally to Exports.
		Bales.	Bales.	%
1895 ... ..		1,595,652	817,333	51.22
1900 ... ..		1,221,163	807,031	66.09
1905 ... ..		1,218,969	926,940	76.04
1910 ... ..		1,921,705	1,624,561	84.54
1911 ... ..		1,975,378	1,642,555	83.15
1912 ... ..		2,020,547	1,700,494	84.16
1913 ... ..		1,718,486	1,518,650	88.37
1914 ... ..		1,966,576	1,703,744	86.64
1915 ... ..		1,575,688	1,222,872	77.61
1916 ... ..		1,619,259	1,443,118	89.12
1917 ... ..		1,263,136	1,670,281	...

\* Including wool absorbed by Local Woollen Mills, and Wool Scouring establishments.

The steady development of the Australian wool market is clearly shewn in this table. In the nineteen years ended 1914, the quantity sold locally more than doubled, and the ratio of wool sold locally to that exported increased from 51 per cent. in 1895 to over 86½

per cent. in the season ended 30th June, 1914. The abnormal conditions obtaining since the outbreak of war have materially affected the ratios, which in consequence are no longer serviceable as a measure of growth of the local market.

During the past season 1,670,281 bales of wool were sold in Australia, and 546,300 bales in New Zealand, representing a total value of £45,631,102. This enormous quantity far exceeds the sales of any other wool producing country in the world.

(ix.) *Quantities of Various Descriptions of Wool Sold or Appraised in each State.* The quantities and ratios of the various descriptions of wool marketed in each State are shewn in the following tables:—

**PROPORTIONS OF THE VARIOUS DESCRIPTIONS OF WOOL SOLD OR APPRAISED LOCALLY IN THE SEVERAL STATES OF THE COMMONWEALTH DURING THE SEASON ENDED 30th JUNE, 1917.**

Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00

Wool in the grease represented 88½ per cent. of the total marketed during the period under review. Of fleece and lambs wool, the former represents 92.36, and the latter 7.64

per cent. The class of wool produced is principally merino, which is almost exclusively grown in the northern and central parts of the continent, the bulk of the merino wool dealt with in Victoria coming from Riverina and other parts of New South Wales. Victoria, the southern parts of South Australia and of New South Wales, and Tasmania, produce nearly the whole of the crossbred and other strong bred wools.

(x.) *Percentages in each State of Various Descriptions of Wool Sold or Appraised.* The following table gives the percentages of each description of wool sold or appraised in the several States during the season 1916-17 :—

## § 6. Hides and Sheepskins.

1. **Extent of Trade.**—In addition to the hides and sheepskins treated in the tanneries of the several States, a very considerable export trade is carried on, the total value of the hides and sheepskins exported from Australia during the five years 1912 to 1916-17 being no less than £13,635,549, or an average of £2,727,110 per annum.

2. **Sheepskins with Wool.**—By far the largest item included in the amount mentioned in the preceding paragraph arises from the value of sheepskins with wool exported, which are shipped principally to the United Kingdom and France. Details concerning the number so exported during the five years 1912 to 1916-17 are as follow :—

**COMMONWEALTH EXPORT OF SHEEPSKINS WITH WOOL, 1912 to 1916-17.**

Country to which Exported.	1912.	1913.	1914-15.	1915-16.	1916-17.	Total for 5 Years.

4. **Hides.**—The Commonwealth trade in hides has now assumed considerable proportions, and during 1913 the total value of hides exported amounted to £1,657,971. The exports were principally to the United Kingdom, the United States of America, Belgium and Germany. The disastrous drought of 1914-15 greatly reduced the quantity of hides in the succeeding years. This, in conjunction with the increased demand for leather, more especially for military purposes, resulted in a considerable falling-off in the quantity of hides available for export. To insure against a shortage of supplies for home consumption, on the 28th October, 1914, the Government by proclamation prohibited the exportation of hides unless the consent in writing of the Minister for Trade and Customs was first obtained. The embargo when enforced was in the case of heavy hides only. Large quantities of hides are imported into the Commonwealth, mainly from New Zealand and the Pacific Islands. The total value of hides imported during 1916-17 was £161,380.

Particulars concerning the export of hides during the past five years are as follows:—

**COMMONWEALTH EXPORT OF HIDES.\* 1912 to 1916-17.**

**§ 7. Graphical Representation of Pastoral Production.**

1. **General.**—As comparatively complete statistics relative to the number of horses, cattle, sheep and pigs are available from 1860, the graphical representation of the fluctuations in numbers for the Commonwealth as a whole, shewn on page 321, covers the period from 1860 to 1916.

2. **Horses.**—With relatively unimportant fluctuations the number of horses in the Commonwealth increased at a fairly consistent rate until 1895, when a decline set in, culminating in the losses of the drought of 1902. At this latter point the number was practically identical with that for 1890. From 1902 onwards a rapid improvement was experienced, the totals for 1913 and 1914 being the highest recorded. The disastrous drought of 1914-15 was responsible for heavy losses, the number recorded at the close of the latter year being considerably less than in 1912. The 1916 figures, however, shewed a substantial increase, the returns being somewhat below those for 1913, but above those for 1912.

3. **Cattle.**—The graph for cattle furnishes evidence of rapid increase in number, interrupted by four marked periods of decline, of which the first extended from 1862 to 1866, the second from 1881 to 1885, the third from 1894 to 1902. So extensive was this last-mentioned decline that the number receded to that of 1879. From 1902 a rapid recovery took place, and the total for 1911 exceeded that existing at the end of the year 1895, though still short of the maximum attained in 1894. The fourth period of decline commenced in 1912, the figures from that year to 1914 shewing a slight decline, while those for 1915 shew a very serious falling-off, the difference between the 1911 and 1915 returns amounting to over 16 per cent. In 1916 the number of cattle commenced to ascend, an increase exceeding 500,000 being in evidence over the number for the previous year.

4. **Sheep.**—In the case of sheep the graph furnishes evidence of six periods in which the upward movement in number has been arrested or reversed. The first of these occurred between 1868 and 1871, the second between 1875 and 1877, the third during 1884, the fourth, by far the most serious, between 1891 and 1902, the fifth during 1912, and the sixth during 1914-15. From 1902 to 1907 a rapid increase took place, succeeded by a slight decline in 1908, and a rapid advance in 1909, 1910 and 1911, the point reached in the latter year being the highest since 1894. The return for 1912 shews a considerable decrease; this was followed by an increase in 1913, but there was a heavy falling-off in 1914, amounting to  $7\frac{1}{2}$  per cent., and a still heavier one in 1915, amounting to over  $11\frac{1}{2}$  per cent., the total number of sheep in the latter year being the lowest since 1904. As in the case of all other live stock there was a very substantial increase in the number of sheep during 1916, an increase of nearly 11 per cent. having taken place.

5. **Pigs.**—The graph for pigs exhibits more numerous fluctuations than that for any of the other classes of live stock represented, and from 1904 to 1908 furnished evidence of a persistent decline. In 1909, however, an upward movement took place; and this was well maintained during the two succeeding years, the 1911 returns exceeding all previous records. There was a considerable decrease in 1912, and a smaller one during 1913. The 1914 returns, however, shew an upward tendency, followed by a sharp decline during 1915, and an even sharper increase in 1916.

## SECTION VIII.

## AGRICULTURAL PRODUCTION.

NOTE.—Except where otherwise stated, the "agricultural" years hereinafter mentioned are taken as ending on the 31st March.

## § 1. Introductory.

1. **Early Attempts at Agriculture.**—The instructions issued to Captain Phillip on the 25th April, 1787, directed him, amongst other things, to proceed as soon as possible to the cultivation of the soil "under such regulations as may appear to be necessary and best calculated for securing supplies of grain and provisions." When the settlers landed at Botany Bay, however, it was found that the glowing accounts published in England by members of Captain Cook's expedition of the fertility of the soil in that locality were considerably overdrawn. Even when Phillip and his company moved round to Port Jackson on the 26th January, 1788, matters were for a time in no better case. The ground in the immediate neighbourhood of the settlement was not suitable for the cultivation of cereal crops, and when the time came to cultivate the soil it was found that there were very few who possessed the slightest acquaintance with the art of husbandry.

2. **The First Sowing.**—In his despatch of the 15th May, 1788, Captain Phillip states that it was proposed to sow eight acres with wheat and barley, although, owing to the depredations of field mice and ants, he was doubtful of the success of the crops.

3. **Discovery of Suitable Agricultural Land.**—A branch settlement was formed at Rosehill, on the Parramatta River, towards the close of 1788, and here grain crops were successfully raised. In his despatch of 12th February, 1790, Phillip refers to the harvest at Rosehill at the end of December, 1789, as consisting of 200 bushels of wheat and 60 of barley, in addition to small quantities of oats, Indian corn, and flax. By the year 1791 there were 213 acres under crop in this locality. In 1792 a new settlement was formed at Toongabbie, about three miles westward of Parramatta, where Phillip states "there are several thousand acres of exceeding good ground." The Hawkesbury Valley, which probably contains some of the richest land in the world, was first settled in 1794. For a long time agricultural operations in Australia were restricted to the narrow belt of country between the tableland and the east coast of New South Wales, as it was not until the year 1813 that a passage was discovered across the Blue Mountains to the fertile plains of the west.

## § 2. Progress of Agriculture.

1. **Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797," Governor Hunter gives the acreage under crop as follows:—Wheat, 3361 acres; maize, 1527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6877 acres; maize, 3389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 34 acres.

By the year 1850 the area under crop had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area under crop declining from 491,000 acres in 1850 to 458,000 acres in 1854; the area under cultivation in New South Wales decreased by nearly 66,000 acres, while in Tasmania a falling-off of over 41,000 acres was experienced. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia totalled over a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania 229,000 acres, and New South Wales 223,000 acres.

**2. Progress of Cultivation since 1860.**—The following table shows the area under crop in each of the Commonwealth States and Territories at quinquennial intervals since 1860 and during each of the last seven seasons. The area under permanent artificially-sown grasses is excluded in all the States, except for the years 1860-79 in the case of New South Wales, where the acreage cannot be separated. During those years, however, the area laid down under permanent grasses could not have been very large:—

1914-15	4,807,001	4,622,759	792,568	3,232,364	1,867,547	274,474	391	4,870	15,651,974
1915-16	5,796,376	5,711,265	729,588	3,763,570	2,189,456	333,334	274	4,371	18,528,234
1916-17	5,164,434	4,851,335	885,259	3,627,477	2,004,944	270,526	274	2,131	16,806,380

The increase in the area under crop during the past ten years has been most marked in the case of New South Wales, Victoria and Western Australia, the respective increases being 2,337,777, 1,547,749, and 1,544,119 acres. During the same period an increase of 1,470,242 acres was experienced in South Australia, 325,506 in Queensland, and 25,782 acres in Tasmania. The total area under crop in the Commonwealth increased during the period by 7,253,580 acres, and the total for 1915-16 was the highest ever attained by the Commonwealth. During these past ten seasons the percentage of increase was particularly high in Western Australia, viz., 335 per cent. New South Wales had an increase of 83 per cent., while South Australia, Queensland, Victoria, and Tasmania added to their areas under crop to the extent of 68, 58, 47 and 11½ per cent. respectively. The increase for the whole of the Commonwealth during the same period was 75.9 per cent.

**3. Relation to Population.**—From the following table it will be seen that for the Commonwealth as a whole the area under crop has, during the seasons under review, with the exception of 1916-17, increased at a rate which is greater than that at which

the population of the Commonwealth has increased. This relatively greater increase is in evidence in all the States, being most marked in the case of Western Australia, which has now a larger area under crop per head of population than any State except South Australia. Details for 1901-2 and for the past five seasons are as follows:—

**TOTAL AREA UNDER CROP PER 1000 OF POPULATION, 1901-2 and 1912-13

1915-16	3,099	4,025	1,075	8,584	6,885	1,658	60	2,390	3,757
1916-17	2,779	3,468	1,322	8,383	6,493	1,353	57	959	3,447

4. **Relation to Total Area.**—The next table furnishes a comparison of the area under crop in the Commonwealth and the several States and Territories, with the respective total areas. For the Commonwealth as a whole, the area under crop in 1916-17 represented only about one acre in every 113. In Victoria the proportion was about one acre in every 11½, in New South Wales one in 38, in Tasmania one in 62, in South Australia one in 67, in Western Australia one in 311, in Queensland one in 485, in the Federal Territory one in 282, and in the Northern Territory one in 1,223,054.

**PERCENTAGE OF AREA UNDER CROP TO TOTAL AREA, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aus.	Tas.	Northern Territory	Federal Terr.	C'with.
	%	%	%	%	%	%	%	%	%
1901-2	1.147	5.273	0.113	0.919	0.035	1.386	...	...	0.442
1912-13	1.887	7.253	0.156	1.259	0.192	1.705	0.0001	0.641	0.685
1913-14	2.230	7.807	0.174	1.303	0.246	1.574	0.0001	0.738	0.771
1914-15	2.427	8.219	0.185	1.349	0.299	1.636	0.0001	0.834	0.822
1915-16	2.927	10.154	0.170	1.547	0.351	1.987	0.0001	0.749	0.973
1916-17	2.608	8.625	0.206	1.491	0.321	1.612	0.0001	0.354	0.883

5. **Artificially-Sown Grasses.**—In all the States considerable areas are devoted to artificially-sown grasses, mainly sown on uncultivated land after burning off the existing vegetation and consequently not included with "area under crops." Statistics regarding the area under such grasses are as shewn hereunder:—

**AREA UNDER SOWN GRASSES, 1901-2 and 1912-13 to 1916-17.**

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Fed. Terr.	Commonwealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2	467,839	162,954	34,679	23,510	3,711	314,422	...	1,007,115
1912-13	1,152,399	1,085,346	205,363	30,377	5,168	508,714	50	* 2,987,419
1913-14	1,234,405	1,094,566	236,582	30,277	6,919	605,559	50	* 3,208,362
1914-15	1,278,883	1,202,130	290,147	24,974	8,025	647,602	70	* 3,451,831
1915-16	1,247,029	1,182,995	305,186	25,443	9,119	675,335	70	* 3,445,377
1916-17	1,357,087	1,292,817	363,876	29,644	8,327	654,072	70	* 3,706,093

\* Including 2 acres Northern Territory 1912-13, 4 acres 1913-14, and 200 acres 1915-16 and 1916-17.

The considerable increase in the area of the grass lands of the Commonwealth is due in large measure to the great development of the dairying industry which has taken place during recent years, and which is referred to in the succeeding section.

### § 3. Relative Importance of Crops.

1. **Various Crops.**—In the following table are furnished details concerning the areas in the several States under each of the principal crops for the season 1916-17 :—

#### DISTRIBUTION OF CROPS IN AUSTRALIA, 1916-17.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T. 1915-16.	Fed. Terr.	Total for C'wth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

\* Canary Seed only, balance included with acreage under green forage and hay.

2. **Relative Areas of Crops in States and Territories.**—Taking the principal crops, *i.e.*, those in the case of which the cultivation amounts to more than 50,000 acres in the Commonwealth, the proportion of each in the various States and Territories to the total area under crop for the season 1916-17 is shewn in the next table. In five of the States, *viz.*, New South Wales, Victoria, Queensland, South Australia, and Western Australia, wheat-growing for grain is by far the most extensive form of cultivation, while in the same States, with the exception of Queensland the hay crop is second in importance. In Victoria, South Australia, and Western Australia the oat crop occupies third position. In Queensland, on the other hand, the three principal crops in the order of importance are wheat, maize, and sugar cane, while in Tasmania hay, oats, orchards and fruit gardens occupy the leading positions. For the Commonwealth as a whole, the wheat, hay, and oat crops represent over 89½ per cent. of the total area under crop.

## PROPORTION OF AREA UNDER CHIEF CROPS, 1916-17.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Federal Terr.	C'wealth

## 3. Relative Positions of States and Territories in regard to Principal Crops.—

The relative proportion of acreage of the several crops and the position regarding them in each State and Territory is shewn in the following table. New South Wales exhibits the largest area under wheat and green forage; Victoria is in the leading position in regard to hay, oats, orchards and fruit gardens, and potatoes; and Queensland is first in sugar cane and maize and second in green forage. South Australia had the largest area under vineyards and barley, and occupied second position in regard to oats; Western Australia held third position in oats and fourth in wheat, hay, barley, and vineyards; while Tasmania was second in regard to potatoes, and third in orchards and fruit gardens.

## RELATIVE POSITIONS OF STATES AND TERRITORIES IN REGARD TO AREA UNDER EACH OF THE PRINCIPAL CROPS DURING THE SEASON 1916-17.

Crop.	N.S.W.	Vict.	Q'land.	S. Aust.	W.A.	Tas.	N.T.	Federal Terr.	C'wlth.

All other Crops ... ..	130,976	128,519	133,794	121,185	125,193
Total ... ..	13,038,049	14,683,012	15,651,974	18,528,234	16,806,380

During the period under review the area devoted to the several crops has varied considerably, that under wheat attaining a maximum in the season 1915-16, and a minimum in 1912-13, while hay also reached its maximum area in 1915-16, and its minimum in 1914-15. Of the other crops, maize, orchards and fruit gardens, sugar cane, barley and vineyards attained their maximum areas in 1916-17, green forage in 1914-15, potatoes in 1913-14, and oats in 1912-13.

**§ 4. Wheat.**

1. **Progress of Wheat-Growing.**—(i.) *Acreage.* The area under wheat for grain is given below for each State at various periods since 1860, and is shewn diagrammatically in the graph hereinafter:—

**AREA UNDER WHEAT, 1860-1 to 1917-18.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	N.T.	Fed. Terr.	C'wealth.

1917-18	3,232,700	2,690,216	148,174	2,355,682	1,249,637	21,812	...	†	9,698,221

\* Preliminary figures, except Victorian which are final. † Including Federal Territory.  
‡ Included with New South Wales.

The area devoted to the production of wheat for grain was higher for the season 1915-16 than for any previous season, there being an increase in all the States with the exception of Queensland, which shewed a falling-off. The figures for the season 1916-17 shew a reduction in area under wheat for grain in all the States with the exception of Queensland and South Australia, where the acreages for both States are the highest on record. The average area under wheat in the Commonwealth in the past ten seasons, 1907-17, was 8,232,838 acres. The past four seasons exceeded this average, while the previous six seasons fell short of it.

Although final figures for 1917-8 for all the States are not yet available, the data to hand indicate the total area under wheat for grain in the Commonwealth as about 9,700,000 acres, representing a decrease of nearly 16 per cent. on the 1916-17 area. New South Wales returns shew a decrease in acreage of about 15 per cent.; Victoria, 14 per cent.; Queensland, 35 per cent.; South Australia, 15 per cent.; Western Australia, 20 per cent.; and Tasmania, 16 per cent.

(ii.) *Yield.* The production during the same period for each State and for the Commonwealth as a whole is given below :—

#### PRODUCTION OF WHEAT, 1860-1 to 1917-18.

\* Final figures Victoria and Queensland, those for remaining States approximate.

† Included with New South Wales.

The yield for the 1916-17 season was 152,420,189 bushels, which constitutes the second largest yield on record; the harvest of 1915-16 was the largest ever reaped in the Commonwealth, and exceeded by over 75,700,000 bushels that of 1913-14, the previous largest return; the 1910-11 yield was 95,111,983 bushels, that for 1912-13, 91,981,070 bushels, and that for 1909-10 was 90,413,597 bushels, these being the only five occasions, prior to 1916-17, on which a yield exceeding 90,000,000 bushels was obtained. The harvest for 1914-15 was poor, the prolonged drought having been disastrous to the wheat areas. The yield was 24,892,402 bushels, the lowest since 1902. The approximate estimate for the 1917-18 season gives 115,237,118 bushels, which, though shewing a decrease of more than 24 per cent. as compared with the previous season's returns, is, nevertheless, the third highest yield on record for the Commonwealth as a whole. The only State shewing an increased yield for 1917-18 was New South Wales, the increment being 3.4 per cent.

(iii.) *Average Yields.* In the next table will be found the average yield of wheat per acre in each of the seasons 1901-2 and 1912-13 to 1916-17 and for the decennium 1907-17 :—

## YIELD OF WHEAT PER ACRE, 1901-2 and 1912-13 to 1916-17.

Season.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tasmania.	N.T.	Fed. Terr.	C'wealth.
	Bushels.	B'shls.	B'shls.	B'shls.	B'shls.	B'shls.	B'shls.	B'shls.	B'shls.
1901-2 ...	10.64	6.91	19.40	4.60	10.10	21.86	...	...	7.54
1912-13 ...	14.56	12.58	15.81	10.34	11.56	24.99	...	20.54	12.53
1913-14 ...	11.86	12.84	13.34	7.47	12.15	18.97	...	13.32	11.13
1914-15 ...	4.65	1.38	12.48	1.41	1.91	16.10	...	10.55	2.58

1916-17 ...	9.61	16.37	10.81	16.46	10.28	12.53	...	14.06	13.22
Average 10 seasons	11.50	11.90	11.43	10.46	9.20	20.05	...	14.28	11.13
1907-17									

As the above figures shew, there were considerable variations in the average yields, chiefly due to the vagaries of the season.

For the Commonwealth as a whole the average yield for 1914-15 of 2.58 bushels per acre was 8.55 below the average yield of 11.13 per acre during the last ten seasons. The highest average yield for any State for that season was in Tasmania with 16.10 bushels per acre, and the lowest in Victoria with 1.38 bushels per acre. The yield of 14.34 bushels per acre for the Commonwealth for 1915-16 exceeded that of any year since 1866 by more than three-fifths of a bushel, while the yield of 13.22 bushels per acre for 1916-17 has been exceeded only four times in the last fifty years. The Victorian average of 16.17 for 1916-17 was the highest recorded for that State since 1872, while the Tasmanian average of 12.53 was the lowest ever experienced there.

(iv.) *Relation to Population.* During the seasons embraced in the following table, the Commonwealth's production of wheat per head of population has varied between  $3\frac{1}{2}$  bushels in 1902-3 and  $36\frac{1}{2}$  bushels in 1915-16. The State in which wheat-growing occupies the most important position relatively to population is South Australia, which in 1916-17 had a yield averaging over 105 bushels per head. Queensland and Tasmania are the States in which the average production of wheat per head is least, the quantity raised being considerably below that required for local consumption. Particulars for 1901-2 and the past six seasons are as follows:—

## AUSTRALIAN WHEAT PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1917-18.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Fed. Terr.	C'wealth.

\* Approximate, except for Victoria and Queensland. † Included with New South Wales.

The normal annual consumption of wheat in Australia, exclusive of the requirements for seed, poultry and other live stock, is 325 lbs. (5.42 bushels) per head of population.

2. *Australian and Foreign Wheat Yields.*—In the next table will be found a statement of the average return per acre in the principal wheat-growing countries of the world, ranging from Denmark with a maximum of 38.52 bushels per acre, to Mexico with a minimum of under 3 bushels per acre. Australia with approximately 13.22 occupies a relatively subordinate position.

Egypt ...	35,424,784	Mexico (1915) ...	3,877,600

\* Including Poland and Northern Caucasia.

Various estimates of the total quantity of wheat produced in the world have been made. That furnished by the International Institute of Agriculture, Rome, gives the following figures for the ten years 1907 to 1916:—

## WORLD'S PRODUCTION OF WHEAT, 1907 to 1916.

Year.	1,000,000 bushels.	Year.	1,000,000 bushels.	Year.	1,000,000 bushels.
1907 ...	3,131	1911 ...	3,512	1915 ...	4,492
1908 ...	3,137	1912 ...	3,795	1916 ...	3,657
1909 ...	3,569	1913 ...	4,048	Average for	
1910 ...	3,525	1914 ...	3,548	10 years ...	3,641

In this estimate the figures given for Australia and New Zealand relate to the agricultural year ending on 31st March in the year specified.

For the ten years referred to, the Australian production of wheat aggregated 830,113,000 bushels, thus representing 2.3 per cent. of the world's production. The total quantity of wheat produced in the British Empire during the same period of ten years was approximately 7,214 million bushels, so that the Australian production of wheat represented 11.5 per cent. of that of the British Empire, while the British Empire production represented 19.8 per cent. of the world's total.

4. **Prices of Wheat.**—(i.) *British Wheat.* Since the United Kingdom is the largest importer of Australian wheat, the price of wheat in the British markets is a matter of prime importance to the local producer. The table below gives the average prices per Imperial quarter realised for British-grown wheat:—

**PRICES OF BRITISH WHEAT PER QUARTER, 1861 to 1916.**

Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.	Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.
	s. d.	s. d.	s. d.		s. d.	s. d.	s. d.
1861 ...	55 4	61 6	50 0	1907 ...	30 7	36 3	26 0
1871 ...	56 8	60 0	52 6	1908 ...	32 0	35 6	30 5
1881 ...	45 4	55 2	40 9	1909 ...	36 11	44 9	31 4

1906 ...	28 3	30 9	25 9	1916 ...	58 5	75 10	46 3

(ii.) *Australian Export Values.* In the next table will be found a statement of the export values of Australian wheat during each of the last ten years:—

**EXPORT VALUES OF AUSTRALIAN WHEAT, 1907 to 1916-17.**

Year.	1907.	1908.	1909	1910.	1911.	1912.	1913.	1914-15.	1915-16.	1916-17.
Price per bushel	3s. 4d.	4s. 1d.	4s. 2d.	4s. 2d.	3s. 6d.	3s. 11d.	3s. 9d.	4s. 1d.	5s. 7d.	4s. 10d.

The export values here shewn are the average declared values for the successive years at the several ports of shipment in the Commonwealth.

5. **Imports and Exports of Wheat and Flour.**—(i.) *Quantities.* The table hereunder shews the imports, exports, and net exports of wheat and flour during 1901 and from 1912 to 1916-17. For the sake of convenience, flour has been expressed at its equivalent in wheat, one ton of flour being taken as equal to 50 bushels of grain. During 1903 and 1915-16 the Commonwealth imports of wheat and flour were equivalent to 12,607,940 and 5,633,596 bushels of wheat respectively. This importation was necessitated in each case by the failure of the crop in the preceding season. In ordinary seasons the import of wheat and flour is negligible. During the past five years the export has ranged between 6,886,293 bushels in 1914-15 and 69,810,522 bushels in 1916-17, the net exports for the period averaging 40,077,246 bushels.

**IMPORTS AND EXPORTS OF WHEAT AND FLOUR, COMMONWEALTH, 1901 AND 1912 TO 1916-17.**

Year.	Imports.			Exports.			Net Exports.
	Wheat.	Flour.	Total.	Wheat.	Flour.	Total.	
	Bushels.	Eq. Bshls.*	Bushels.	Bushels.	Eq. Bshls.*	Bushels.	Bushels.
1901	22,992	302,550	325,542	20,260,058	4,840,700	25,100,758	24,775,216
1912	1,483	7,300	8,783	32,604,248	8,404,700	41,008,948	41,000,165

1916-17	40	3,000	3,040	55,278,872	14,531,650	69,810,522	69,807,482

\* Equivalent in bushels of wheat.

(ii.) *Destination of Exported Breadstuffs.* In the next two tables will be found a list of the principal countries to which the Commonwealth exported wheat and flour during each year of the period 1912 to 1916-17. The countries are as shewn in the Australian Customs returns, but owing to the fact that in normal times wheat ships are frequently instructed to call for orders at various ports, the countries to which these ports belong cannot always be considered as the ultimate destination of the whole of the wheat said to be exported to them.

#### EXPORTS OF WHEAT FROM THE COMMONWEALTH, 1912 to 1916-17.

For the five years under review the export of wheat to the United Kingdom amounted to 89,765,063 bushels, or nearly 55 per cent. of the total export for the period. On the other hand, the export of flour to the United Kingdom aggregated only 229,385 tons, or 26 per cent. of the total export. During the quinquennium the heaviest exports of flour have been to the United Kingdom, South Africa, Java, the Straits Settlements, the Philippine Islands, and Portuguese East Africa.

(iii.) *Exports of Wheat and Flour.* From the foregoing returns it will be seen that the quantity of Australian wheat exported in the form of flour during the past five years represents, on the average, slightly over 21 per cent. of the total equivalent in wheat exported as wheat or flour from the Commonwealth.

A point of some interest in connection with the export of wheat, and one which bears also on the proportions of wheat and flour exports just referred to, is that concerning the quantity of phosphoric acid which this export has the effect of removing from the Commonwealth, and the necessity which exists for the return to the soil of this substance in some form.

According to an estimate furnished by the chemist to the New South Wales Department of Agriculture (F. B. Guthrie, Esq., F.C.S., etc.), the proportions of milled product from a bushel (60 lbs.) of wheat are, approximately, 42 lbs. of flour, 9 lbs. of bran, and 9 lbs. of pollard, while the percentage of phosphoric acid contained in these products is as follows:—

Flour ...	...	...	0.32 per cent.,	or 0.13 lb. per bushel.
Bran ...	...	...	3.00	" 0.27 "
Pollard ...	...	...	0.90	" 0.08 "

The total amount of phosphoric acid contained in a bushel of wheat is, therefore, 0.48 lb., of which 0.13 lb. is in the flour and 0.35 lb. in the offal.

During the past ten years the net exports from the Commonwealth of wheat and its milled products have amounted to 334,647,905 bushels of wheat, 1,605,155 tons of flour, and 3,465,795 bushels of bran, pollard, and sharps. On the basis of the figures quoted above this export would contain no less than 172,000,000 lbs. of phosphoric acid, the value of which as a fertiliser would be over a million pounds sterling.

(iv.) *Local Consumption of Wheat.* The estimated consumption of wheat for food and for seed purposes in the Commonwealth during the past ten years is given in the following tables:—

**WHEAT USED FOR HUMAN CONSUMPTION IN THE COMMONWEALTH,  
1907 TO 1915-16.**

Year.	Flour Milled.	Net Exports of Flour.			Net Quantity Available for Home Consumption.		Net Quantity Available per Head of Population.

Aggregate for 10 years ...	95,929,691	89,480,000	.933	1.959

In addition to the above, there is to be taken into consideration grain fed to poultry and other live stock. This, doubtless, varies in quantity from year to year according to the prices current for wheat, and other causes. No data are available on which to base an estimate of actual quantity so consumed. The flour available for human consumption necessarily fluctuates from year to year coincident with stocks being heavy or light. In some years the flour available per head of population, after deducting net exports from quantity milled, shows a substantial increase over the average for the previous year, this, however, being counterbalanced by a decline in the following year. The average quantity of flour consumed per annum for the ten years under consideration was 0.1084 tons per head of population, which, when expressed in equivalent terms in wheat, represents 5.422 bushels. The estimates of quantity of grain used for seed purposes have been based on data supplied by the Agricultural and Statistical Departments of the several States giving average quantities of seed used per acre for wheat sown either for grain, hay or green fodder. The average annual quantity thus used during the ten years was 1.959 bushels per head of population, and 0.933 bushels or 56 lbs. per acre sown.

A steady decline in the average quantity of seed wheat per acre is in evidence during the period under review, chiefly due to the general use of more economical methods of sowing by the use of drills, etc.

Reference will be found in a subsequent section to Commonwealth and State legislation for control of trade and prices of commodities during the war. Various State Boards and Commissions and a Federal Royal Commission were appointed to collect information and to report on such matters as the supply of foodstuffs and other necessities required by, and available for, Australia, and other important matters relating to conditions of trade and industry.

**6. Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in the Commonwealth during the season 1916-17 is shewn below :—

**VALUE OF THE WHEAT CROP,\* 1916-17.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Terr.	C'w'lth.

Value per acre ...	£2/0/10	£3/13/8	£2/17/8	£3/18/2	£1/19/0	£2/19/7	£2/19/3	£2/18/10

\* Exclusive of the value of straw.

**7. The Australian Wheat Marketing Scheme.**—(i.) *General Principles.* Owing to the abnormal conditions prevailing, a Wheat Marketing Scheme was entered into by the Governments of the Commonwealth and of the States of New South Wales, Victoria,

South Australia, and Western Australia, for the purpose of realising to the best advantage the 1915-16 wheat harvest of the States named, and of making advances to farmers pending realisation. It was subsequently decided that the 1916-17 harvest, and later, the 1917-18 harvest, should be dealt with on similar lines to those of the 1915-16 harvest.

The general principles of the scheme may be shortly stated thus:—

1. That all growers should participate equitably in the realisation of the harvest and the proceeds thereof.
2. That the limited freights available should be allotted between the States in accordance with the exportable surplus of each.

The securing and general allotment of freights is under the control of the Chartering Agents, who are responsible to the Commonwealth Government.

The distribution of freights among the States is in charge of the Australian Wheat Board, which also has the duty of realising the crop. This Board consists of Ministerial representatives of the Governments of the Commonwealth and of the States and an elected representative of the growers. It has the assistance of an Advisory Board consisting of well-known wheat shippers. A London Wheat Committee, consisting of the High Commissioner and the Agents-General of the States concerned, acting with the advice of the London representatives of the wheat shippers, arranges overseas sales. Adjustments are to be made between the States so that, having regard to the quantity shipped, each will ultimately receive the average net result of the whole of the overseas realisations.

In certain States the crop is bought by the State Government, and in others the wheat is received from the growers for sale on their behalf.

The Australian Wheat Board fixes all prices at which wheat may be sold, except in the case of poultry feed, which is left to the States to regulate.

Each State has a local Board or Commission to control the operations of the scheme within the State concerned. This Board or Commission effects all local sales, including sales to millers.

(ii.) *Advances and Finance.* Under arrangements with the Australian banks made by the Commonwealth and State Governments, advances are made to farmers upon delivery of their wheat at railway stations to representatives of agents appointed by the different State Governments. Upon the 1915-16 crop, advances made amount to 4s. 6d. per bushel, less rail freight and handling charges. This will still leave for distribution a small amount, varying in the different States in accordance with differences in local realising, and in interest and other expenses. Upon the 1916-17 and 1917-18 crops, advances have been made amounting to 3s. per bushel. This represents the position as at 29th April, 1918; a reference to later developments will be found in the Appendix.

Proceeds of wheat as realised are applied in reduction of the bank overdrafts caused by payment of advances and expenses. The rate of interest payable to the banks is five per cent. The Government of each State has undertaken to repay all advances made on account of such State, and the Commonwealth Government has guaranteed repayment by the States. Advances to growers are made by means of certificates issued by the agents appointed by the various States. The certificates are payable at banks named by the growers.

(iii.) *Results of the Scheme.* In all the States, certain wheat, particularly seed wheat, has not been brought under the scheme. The quantity of wheat pooled therefore differs from that harvested in each State. In addition, wheat grown in one State may be pooled in another. A considerable quantity of New South Wales wheat is included in Victorian returns, and the Victorian total also includes a small quantity of South Australian wheat.

Deliveries made on account of each harvest are as follows :—

State in which pooled.	1915-16.	1916-17.	1917-18 to 29/4/18.
	Bushels.	Bushels.	Bushels.
New South Wales ...	58,244,000	32,471,000	32,618,000
Victoria ...	59,176,000	50,392,000	35,607,000
South Australia ...	29,894,000	41,990,000	25,304,000
Western Australia ...	14,943,000	13,825,000	7,350,000
Total ...	162,257,000	138,678,000	100,879,000

On 29th April, 1918, the total overdraft on all pools amounted to £11,034,000.

The quantities of wheat disposed of and on hand on that date were as follows (a bag may roughly be taken as equivalent to three bushels, except in New South Wales 1916-17, where it amounts to 2½ bushels per bag):—

Particulars.	N.S.W.	Vic.	S.A.	W.A.	Total.
1915-16. (In thousands of bags).					
Shipments ...	9,726	11,949	5,690	3,428	30,793
Local Sales ...	9,786	6,706	3,076	1,640	21,208
Stocks on hand ...	16	756	1,034	...	1,806
Total ...	19,528	19,411	9,800	5,068	53,807
1916-17. (In thousands of bags).					
Shipments ...	856	122	1,675	558	3,211
Local Sales ...	2,868	3,868	968	1,523	9,227
Stocks on hand ...	8,069	12,601	11,099	2,402	34,171
Total ...	11,793	16,591	13,742	4,483	46,609
1917-18. (In thousands of bags).					
Shipments ...	16	...	...	...	16
Local Sales ...	799	526	...	...	1,325
Stocks on hand ...	10,406	11,157	8,414	2,451	32,428
Total ...	11,221	11,683	8,414	2,451	33,769

The value realised to 29th April, 1918 (all pools) is as follows :—

Particulars.	N.S.W.	Vic.	S.A.	W.A.	Total.
Oversea shipments and A.W.B. Flour Contracts	£ 8,934,000	£ 10,743,000	£ 6,801,000	£ 3,430,000	£ 29,908,000
Local Sales ...	8,083,000	6,370,000	1,548,000	1,123,000	17,124,000
Total shipments and local deliveries	17,017,000	17,113,000	8,349,000	4,553,000	47,032,000

Since the initiation of the "Pool," several sales of magnitude have been made, including one of 3,000,000 tons to the British Wheat Commission, at a rate of 4s. 9d. per bushel f.o.b., equalling £26,600,000. This is the largest wheat transaction ever recorded.

### § 5. Oats.

1. **Progress of Cultivation.**—Oats came next in importance to wheat amongst the grain crops cultivated last season, but while wheat grown for grain accounted for over 68½ per cent., oats represented only 5 per cent. of the area under crop in the Commonwealth. The progress of cultivation of oats since 1860 is shewn in the table hereunder, and more fully in the graphs hereinafter:—

**CULTIVATION OF OATS, 1860-1 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Federal Terr.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

The principal oat-growing State of the Commonwealth is Victoria. During the past five seasons it has produced about 55 per cent. of the total quantity of oats grown in the Commonwealth; Tasmania, Western Australia, South Australia, and New South Wales come next in order of importance. In New South Wales and Tasmania, the highest production of oats for any season was that of 1909-10, while Victoria and South Australia experienced maximum yields in 1915-16, Queensland in 1916-17, and Western Australia in 1912-13. For the Commonwealth as a whole, the record yield was that of 17,541,210 bushels in the season 1908-9, while the yields of 16,538,979 and 16,248,857 for 1915-16 and 1908-9 respectively, rank second and third.

3. **Average Yield.**—The average yield per acre of the oat crop of the Commonwealth varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Particulars as to average yield in each of the seasons 1901-2 and 1912-13 to 1916-17, and also for the decennium 1907-17, are given in the succeeding table:—

**AVERAGE YIELD OF OATS PER ACRE, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Terr.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2 ...	21.31	20.43	27.50	13.54	16.78	31.48	...	21.22
1912-13 ...	19.64	18.95	19.48	10.76	16.50	36.15	24.57	18.43
1913-14 ...	17.75	20.11	13.74	10.27	12.39	27.06	18.12	17.73
1914-15 ...	11.82	3.70	15.98	2.62	4.84	23.51	11.26	5.60
1915-16 ...	23.00	26.36	7.24	16.87	14.78	27.99	16.08	22.92
1916-17 ...	16.16	18.77	16.55	12.13	13.82	18.28	18.06	16.61
Average for 10 Seasons 1907-17	18.31	18.70	17.01	11.80	13.19	28.87	17.09	17.79

The smallest average yield per acre for the Commonwealth for the past ten-year period was that experienced in the abnormally dry season 1914-15, viz., 5.60 bushels, while the largest was that of the season 1908-9, amounting to 24.03 bushels per acre.

4. **Relation to Population.**—The State in which oat production occupies the most important position in relation to population is Tasmania, the yield for that State representing about 8.5 bushels per head during the last five years under review, as compared with 2.7 bushels per head for the Commonwealth as a whole. Particulars for the seasons 1901-2 and 1912-13 to 1916-17 are furnished in the succeeding table:—

**OAT PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Federal Territory.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	500	5,558	83	1,306	845	9,734	...	2,559
1912-13	939	6,029	129	3,891	6,879	11,446	2,482	3,405
1913-14	1,000	6,296	85	2,729	5,163	7,902	1,403	3,126
1914-15	275	1,124	64	834	1,439	6,662	1,098	879
1915-16	719	6,574	4	4,868	4,837	10,892	820	3,353
1916-17	583	5,926	162	4,251	5,471	5,033	877	2,875

5. **Value of Oat Crop.**—The estimated value of the oat crop of the several States of the Commonwealth for the season 1916-17 is as follows:—

**VALUE OF OAT CROP,\* 1916-17.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Terr.	C'wealth.
Aggregate value	£151,170	£596,006	£19,469	£176,289	£214,688	£125,772	£270	£1,585,664
Value per acre	£2/5/2	£2/0/8	£2/19/4	£1/3/3	£1/15/2	£2/5/8	£2/10/0	£1/17/7

\* Exclusive of the value of straw.

**6. Imports and Exports.**—The production of oats in the Commonwealth has not yet reached such a stage as to admit of a regular export trade in this cereal; in fact in certain years the imports have exceeded the exports, notably in 1903, 1906, 1908, and in each of the four years prior to 1916-17. The quantities and values of oats imported into and exported from the Commonwealth during the years 1901 and 1912 to 1916-17 are given hereunder:—

**COMMONWEALTH IMPORT AND EXPORT OF OATS, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901	1,526,599	153,674	2,874,334	285,347	1,347,735	131,673
1912	2,939,325	398,114	106,275	14,688	—2,833,050	— 383,426
1913	146,102	20,282	111,280	14,102	— 34,822	— 6,180
1914-15	1,767,490	344,201	38,163	7,904	—1,729,327	— 336,297
1915-16	2,473,412	501,755	582,055	85,119	—1,891,357	— 416,636
1916-17	3,700	635	670,985	97,879	667,285	97,244

Note. — signifies net imports.

The principal countries from which the Commonwealth imports of oats have been obtained are the Dominion of New Zealand, Chili, Japan, and the United States of America, while the principal countries to which oats were exported during the period under review were the South African colonies in the earlier, and the United Kingdom, Ceylon, India and New Zealand in the later years. Of the 670,985 bushels exported during 1916-17, 438,900 bushels were shipped to New Zealand.

**7. Oatmeal, etc.**—Importations of oatmeal, etc., into the Commonwealth take place principally from the United Kingdom, the United States, and Canada. The total importations of oatmeal, wheatmeal, and rolled oats during 1916-17 amounted to 384,841 lbs., and represented a value of £7,597 while the exports amounted to 589,003 lbs., valued at £7,395, principally to New Zealand and the Union of South Africa.

**8. Comparison with other Countries.**—A comparison of the Australian production of oats with that of the leading oat-producing countries of the world, is furnished in the following table:—

**PRODUCTION OF OATS IN VARIOUS COUNTRIES, 1916.**

Country.	Quantity of Oats produced.	Country.	Quantity of Oats produced	Country.	Quantity of Oats produced.
	Bushels.		Bushels.		Bushels.

Russia in Asia...	92,061,010	Netherlands ...	21,558,487		
(1915)					

**9. Comparison of Yields.**—The average yield per acre of oats in Australia is a somewhat low one compared with the results obtained in other countries, where the cultivation of this cereal is more extensively carried on. Arranging the countries contained in the foregoing table (with the exception of the Union of South Africa, for which particulars are not available) according to the magnitude of the average yield of oats for the years specified, the results are as follow:—

## YIELD OF OATS PER ACRE, VARIOUS COUNTRIES, 1916.

Country.	Average per Acre.	Country.	Average per Acre.	Country.	Average per Acre.
	Bushels.		Bushels.		Bushels.
Belgium (1914) ...	70.29	France ...	30.61	Spain ...	24.36

\* Year ended 30th June, 1917.

## § 6. Maize.

1. **States Growing Maize.**—The only States in which maize is at all extensively grown for grain are those of New South Wales and Queensland, the area so cropped in these two States during the season 1916-17 being 336,778 acres, or 93½ per cent. of the total for the Commonwealth. Of the balance, Victoria contributed 23,076 acres, South Australia 117 acres, Western Australia 51 acres, and the Northern Territory 45 acres. The climate of Tasmania prevents the growing of maize for grain in that State. In South Australia, prior to 1908, particulars concerning maize had not been specially asked for on the form used in the collection of agricultural statistics. In all the States, maize is grown to a greater or less extent as green forage, particularly in connection with the dairying industry.

2. **Area under Maize.**—The area devoted to the growing of maize for grain in each State, from 1875 onwards, is given in the following table, and the actual fluctuations from year to year are shewn more fully on the graph hereinafter.

The total area under maize in the Commonwealth exceeded 300,000 acres for the first time in the season 1890-1, and although it fluctuated somewhat during the succeeding seventeen years, it may be considered to have remained at about that figure. The greatest divergence during the period occurred in 1903-4, when a record total of 371,906 acres was harvested. For 1908-9 and the two following seasons a continuous increase in the area devoted to maize was in evidence, and the total of 414,914 acres for 1910-11 is the highest ever attained. The unfavourable weather conditions during 1911-12 resulted in the acreage under maize for that season being reduced by 74,849 acres as compared with the preceding season. Since then the area devoted to this crop has fluctuated slightly from year to year, that for 1916-17 being third highest on record.

## AREA UNDER MAIZE, 1875-6 to 1916-17.

Season.	N.S.W.	Victoria.	Queensland.	South Aust.	W. Aust.	N.T.	Fed. Terr.	C'wealth.

\* Particulars for years prior to 1907-8 not available.

3. **Total Yield.**—The average yield per acre of this cereal for the season 1916-17, though an increase over that for the previous season, was considerably below that obtaining for some of the previous years, being 2.94 bushels under the decennial average. The 1910-11 crop was a record one, and exceeded 13,000,000 bushels. The average annual production of maize during the last decade was 9,085,329 bushels. Particulars concerning the yield from 1875 onwards are given hereunder:—

\* Particulars for years prior to 1907-8 not available.

4. **Average Yield.**—In the following table particulars are given of the average yield per acre of the maize crops of the several States for the seasons 1901-2 and 1912-13 to 1916-17, and also for the decennium 1907-17:—

## AVERAGE YIELD OF MAIZE PER ACRE, 1901-2 and 1912-13 to 1916-17.

Season.	N.S.W.	Victoria.	Q'sland.	S. Aust.	W. Aust.	N.T.	Fed. Terr.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	B'shls.	Bushels.
1901-2	22.98	61.42	21.96	*	10.16	...	...	23.86
1912-13	28.93	35.79	21.39	14.93	18.80	40.00	16.68	26.53
1913-14	28.40	44.57	24.97	9.77	11.08	30.00	11.85	27.64

1915-16	24.48	44.92	13.68	22.56	9.75	10.00	17.73	20.99
1916-17	27.89	50.80	16.64	8.49	18.61	10.00	10.00	23.68
Average for 10 Seasons	28.92	47.55	21.45	14.19	13.62	†19.20	‡13.65	26.62
1907-17								

\* Particulars not available. † Average for 7 seasons. ‡ Average for 5 seasons.

The extraordinarily high average yield obtained in Victoria is due, in large measure, to the fact that the area under maize in that State is comparatively small and is situated in districts that are peculiarly suited to the production of this grain. The average yield in New South Wales is appreciably higher than that obtained in Queensland.

5. **Value of Maize Crop.**—The value of the Commonwealth maize crop for the season 1916-17 has been estimated at £1,662,678, made up as follows:—

**VALUE OF MAIZE CROP, 1916-17.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	N.T.	Federal Terr.	C'wealth.
	£	£	£	£	£	£	£	£
Aggregate value	812,520	195,338	654,102	228	300	180	10	1,662,678
Value per acre	£5/4/7	£8/9/4	£3/12/1	£1/19/0	£5/17/9	£4/0/0	£2/0/0	£4/12/4

6. **Relation to Population.**—During the past ten seasons the Commonwealth production of maize has ranged between 1.4 bushels per head of population in 1915-16 and 3 bushels per head in 1910-11. The production in Queensland, the State in which the maize yield per head of population is highest, ranged during the same period between 3 bushels per head in 1915-16 and 7½ bushels per head in 1910-11. Details for the several States for the seasons 1901-2 and 1912-13 to 1916-17 are as follow:—

**MAIZE PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.**

8. **Comparison of Yields.**—The average yield per acre of maize in the Commonwealth during 1916 was 23.68 bushels, and may be regarded as highly satisfactory when compared with that of other maize-producing countries. Canada, Hungary, and Spain

are the only countries shewing a higher average. The remaining countries shewn in the following table had average yields per acre ranging from 10.09 to 23.63 bushels.

#### AVERAGE YIELD OF MAIZE PER ACRE IN VARIOUS COUNTRIES, 1916.

\* Average yield for 10 years, 26.63 bushels.

9. **Oversea Imports and Exports.**—Except in the years 1902, 1903, 1912, 1914-15 and 1915-16, when many of the maize crops failed, the Commonwealth oversea trade in maize has been practically insignificant. In the first of the years mentioned, nearly two million, and in the latter year nearly three and a-half million bushels were imported. In 1908 and 1909 also, owing to the small harvests of the seasons 1907-8 and 1908-9, the imports of maize were largely in excess of the exports. Details of imports and exports for 1901 and the past five years are as follows:—

#### COMMONWEALTH IMPORTS AND EXPORTS OF MAIZE, 1901 and 1912 to 1916-17.

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1914-15 ... ..	1,457,660	282,461	12,266	2,873	1,445,394	279,588
1915-16 ... ..	3,432,571	712,650	4,237	1,088	3,428,334	711,562
1916-17 ... ..	41,952	8,162	50,296	11,894	—8,344	—8,732

Note. — signifies net exports

The principal countries to which maize has been exported from the Commonwealth are New Zealand and China, while the principal countries from which importations have taken place are the United States, the Pacific Islands, and South Africa.

10. **Prepared Maize.**—A moderate quantity of corn-flour is imported annually into the Commonwealth, the principal countries of supply being the United Kingdom and the United States. During the year 1916-17 these importations amounted to 242,134 lbs., and represented a value of £2,212.

11. **Price of Maize.**—The average wholesale price of maize in the Sydney market is given in the following table for each of the years 1907 to 1916:—

#### AVERAGE PRICE OF MAIZE PER BUSHEL, 1907 to 1916.

## § 7. Barley.

1. **Area under Barley.**—The area devoted to barley in the Commonwealth has fluctuated very considerably, though with a tendency to increase during the past few years. Taking a series of years, the principal barley-growing State is Victoria, but for the past four seasons South Australia has attained the lead in regard to acreage, and for 1916-17 accounted for 45 per cent. of the Commonwealth area devoted to this crop; Victoria was next in importance with a percentage of 40½; the remaining 14½ per cent. being represented by Queensland, Western Australia, New South Wales, and Tasmania in the order named. The figures here given relate to the areas harvested for grain; only small areas are cropped for hay, while more considerable quantities are cut for green forage. These, however, are not included in this sub-section. The area under barley for grain in the several States from 1875 onwards is shewn in the following table:—

**COMMONWEALTH AREA UNDER BARLEY, 1875-6 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1875-6	4,817	31,568	613	13,969	5,014	5,939	61,920

1916-17	5,195	93,015	12,674	103,627	11,105	4,637	230,253

\* Including 1 acre Northern and 7 acres Federal Territory in 1912-13, and 9 acres Federal Territory 1913-14.

2. **Total Yield.**—The total production of barley in the Commonwealth for the season 1916-17 amounted to 4,080,492 bushels, giving an average yield of 17.72 bushels per acre as compared with 17.90 for the decennium 1907-17. Particulars concerning the yields of the several States from 1875 onwards are as follows:—

**COMMONWEALTH BARLEY CROP, 1875-6 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

\* Including 120 bushels, Federal Territory, 1912-13, 150 bushels 1913-14.

3. **Malting and other Barley.**—In recent years the statistics of all the States have distinguished between "malting" and "other" barley. Particulars for 1916-17 season are as follows:—

**MALTING AND OTHER BARLEY, 1916-17.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	F.T.	C'wealth.
	Acres	Acres	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Malting barley	2,874	43,131	8,578	77,984	5,157	4,122	...	...	141,846
Other barley	2,321	49,884	4,096	25,643	5,948	515	...	...	88,407
Total ...	5,195	93,015	12,674	103,627	11,105	4,637	...	...	230,253
	Bushels.	Bushels.	Bushels	Bushels.	Bushels.	Bushels	Bus.	Bus.	Bushels.
Malting barley	40,310	806,280	173,210	1,340,302	66,143	78,873	...	...	2,505,118
Other barley	33,060	993,504	76,957	394,118	67,912	9,823	...	...	1,575,374
Total ...	73,370	1,799,784	250,167	1,734,420	134,055	88,696	...	...	4,080,492

Taking the Commonwealth as a whole, about 62 per cent. of the area devoted to this grain in 1916-17 was cropped for malting barley. The proportion varies considerably in the several States.

4. **Total Acreage and Yield.**—The following table sets out the total acreage and yield of malting and other barley in the Commonwealth as a whole during the past ten seasons:—

**AREA AND YIELD, COMMONWEALTH, MALTING AND OTHER BARLEY,  
1907-8 to 1916-17.**

Season.	Acres.			Bushels.			Average Bushels per Acre.		
	Malting	Other.	Total.	Malting.	Other.	Total.	Malting	Other.	Total.
1907-8 ...	89,157	41,942	131,099	1,410,404	581,348	1,991,652	15.82	13.86	15.19
1908-9 ...	95,644	44,599	140,243	1,984,841	889,363	2,874,204	20.75	19.94	20.49
1909-10 ...	91,814	51,199	143,013	1,536,032	900,352	2,436,384	16.73	17.59	17.04
1910-11 ...	67,408	41,016	108,424	1,369,464	856,904	2,226,368	20.32	20.89	20.53
1911-12 ...	80,919	35,547	116,466	1,459,468	597,348	2,056,816	18.04	16.80	17.66
1912-13 ...	135,880	45,507	181,387	2,920,857	938,259	3,859,116	21.60	20.62	21.28
1913-14 ...	151,944	70,620	222,564	2,625,415	1,295,010	3,920,425	17.28	18.34	17.61
1914-15 ...	101,930	51,726	153,656	995,413	333,497	1,328,910	9.77	6.45	8.65
1915-16 ...	106,217	63,297	169,514	2,365,126	1,436,424	3,801,550	22.37	22.69	22.43
1916-17 ...	141,846	88,407	230,253	2,505,118	1,575,374	4,080,492	17.66	17.82	17.72
Average 10 seasons									
1907-17 ...	106,276	53,386	159,662	1,917,216	940,378	2,857,594	18.04	17.61	17.90

For the past ten seasons the area and production of malting barley have represented approximately twice the corresponding figures for other barley. The average yield per acre for five of the seasons was in favour of malting, while for the remaining five seasons the yield per acre for other barley shewed the more satisfactory results. The average yields for the past ten seasons for malting and for other barley were 18.04 and 17.61 bushels per acre respectively.

5. **Value of Barley Crop.**—The estimated value of the total barley crop of the Commonwealth for the seasons 1913-14 to 1916-17, was £564,871; £343,423; £655,917; and £734,154 in the order named. The extent to which the several States have contributed to the latter total is shewn in the following table :—

VALUE OF BARLEY CROP,\* 1916-17.

Particulars.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	Fed. Terr.	C'wealth.
Total value ...	£14,710	£324,500	£54,203	£299,281	£23,721	£17,739	...	£734,154
Value per acre	£2/16/8	£3/9/9	£4/5/6	£2/17/9	£2/2/9	£3/16/6	...	£3/3/9

\* Exclusive of the value of straw.

6. **Relation to Population.**—During the seasons embraced in the following table, the quantity of barley produced in the Commonwealth has averaged slightly under three-quarters of a bushel per head of population. For the season 1916-17 the production ranged from four bushels per head in South Australia to two pounds per head in New South Wales. Details for the season 1901-2 and for the last quinquennium are as follows:—

BARLEY PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2 ...	75	573	547	677	179	956	397
1912-13 ...	163	1,264	231	3,066	305	1,348	815
1913-14 ...	166	1,284	176	3,029	524	930	805
1914-15 ...	25	420	156	1,012	75	520	269
1915-16 ...	61	1,222	12	3,872	412	575	771
1916-17 ...	39	1,287	374	4,008	434	444	837

7. **Commonwealth Imports and Exports.**—The Commonwealth oversea trade in barley is not extensive, and in most years the imports exceed the exports. In 1902, 1903, 1912, and 1914-15 somewhat extensive importations of barley from the United States and New Zealand took place, owing to the shortage in local supply resulting from the severe droughts of those periods. In 1904, the excellent crop of the season furnished the material for a heavy exportation to Japan, the total exported thither during that year being 551,821 bushels. In 1909 also there was a fairly heavy export, mainly to the United Kingdom. Particulars of the Commonwealth oversea imports and exports of barley for the years 1901 and 1912 to 1916-17 are contained in the following table :—

COMMONWEALTH IMPORTS AND EXPORTS OF BARLEY, 1901 and 1912 to 1916-17.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901 ...	55,508	7,208	17,474	1,942	— 38,034	— 5,266
1912 ...	546,177	109,466	1,426	322	—544,751	—109,144
1913 ...	22,810	6,026	7,414	1,069	— 15,396	— 4,957
1914-15 ...	290,226	66,402	103,522	15,245	—186,704	— 51,157
1915-16 ...	147,144	27,387	185,122	36,661	37,978	9,274
1916-17 ...	58	9	256,804	52,891	256,746	52,882

Note. — signifies net imports.

Only in five years during the period embraced in the above table have the Commonwealth exports of barley exceeded in value the imports, viz., in 1904, 1905, 1909, 1915-16, and 1916-17. During the last ten years the total importations amounted to

1,995,383 bushels, valued at £449,994, and the total exports to 831,298 bushels, valued at £147,196, giving a net importation of 1,164,085 bushels with a value of £302,798.

In addition to the above, which relates to the unprepared grain, there is a small importation into the Commonwealth of pearl and Scotch barley, mainly from the United Kingdom and Japan. The total imported during 1916-17 amounted to only 7,345 lbs. weight, with a value of £91.

From time to time a considerable export trade in Australian pearl and Scotch barley has been carried on, mainly with the United Kingdom and New Zealand, the total exports for 1909 reaching 1,155,346 lbs., valued at £3,573, and for 1910, 119,337 lbs., valued at £510. During 1911 and 1912, the exports were only 588 lbs., valued at £8, and 712 lbs., valued at £10, respectively; in 1913, they increased to 62,992 lbs., with a value of £406, while during 1914-15 only 7,314 lbs., valued at £52, were exported. During 1915-16 and 1916-17, however, the exports amounted to 83,982 lbs. and 447,290 lbs. respectively, valued at £656 and £3,090, the bulk of which in the former year went to New Zealand and in the latter to South Africa.

**8. Commonwealth Imports and Exports of Malt.**—In normal times the importations of malt into the Commonwealth are fairly extensive, the supply being obtained principally from the United Kingdom. Details of imports and exports for the years 1901 and 1912 to 1916-17 are given hereunder :—

**COMMONWEALTH IMPORTS AND EXPORTS OF MALT, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£

**9. Comparison with other Countries.**—In comparison with the barley production of other countries of the world, that of Australia appears very small indeed. Particulars for some of the leading countries for the year 1916 are as follows, the Australian figures being added for the sake of comparison :—

**PRODUCTION OF BARLEY IN VARIOUS COUNTRIES, 1916.**

Country.	Production of Barley.	Country.	Production of Barley.

11. **Average Yield.**—The average yield per acre of barley varies considerably in the different States, being as a rule highest in Tasmania and Victoria, and lowest in Western Australia. Details for each State for 1901-2 and the past five seasons, and also for the decennium 1907-17, are given in the following table:—

**AVERAGE YIELD PER ACRE OF BARLEY, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West Aust.	Tas.	C'wealth.

**§ 8. Other Grain and Pulse Crops.**

In addition to the grain crops already specified, the only grain and pulse crops at all extensively grown in the Commonwealth are beans, peas and rye. The total area under the two former crops for the season 1916-17 was 32,393 acres, giving a yield of 586,342 bushels, or an average of 17.39 bushels per acre, being virtually the same as the average yield for the decennium ended 1916-17, which was 17.40 bushels per acre. The States in which the greatest area is devoted to beans and peas are Tasmania, Victoria and South Australia. The total area under rye in the Commonwealth during the season

1916-17 was 9,055 acres, yielding 97,100 bushels, and giving an average of 10.72, this being below the average for the past ten seasons, which is 11.61 bushels per acre. Over 38 per cent. of the rye grown during the season was produced in Victoria, 25 per cent. in New South Wales, and 26½ per cent. in South Australia. In addition to these grain crops a small area of rice has for some years been cultivated in Queensland and the Northern Territory. The results obtained, however, have not up to the present been very satisfactory. Should rice-growing ever be seriously taken up in Australia, it is probable that large tracts of country in the northern parts of Western Australia and in the Northern Territory will be found well suited to its cultivation.

### § 9. Potatoes.

1. **Area.**—The principal potato-growing State of the Commonwealth as regards area is Victoria; Tasmania prior to 1909-10 usually ranking second, and New South Wales third. The relative positions of the two latter States were, however, reversed during the five seasons ended 1913-14, while the position was again reversed in the last three seasons ended 1916-17.

The area under potatoes in each State from 1890 onwards is given hereunder :—

#### COMMONWEALTH AREA UNDER POTATOES, 1890-1 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Terr.	C'wealth.

1916-17 ...	22,437	73,618	8,908	4,737	5,838	34,345	12	149,895

2. **Total Yield.**—For the season 1916-17, Victoria's production represented about 52½ per cent. of the total for the Commonwealth, Tasmania and New South Wales coming next in order with 19 and 12½ per cent. respectively. The total Commonwealth production for the season 1906-7, viz., 507,153 tons, was the highest ever attained, the yield which most nearly approached it being 449,383 tons in 1903-4. Details as to production in the several States during the period from 1890 onwards are as follows :—

#### COMMONWEALTH PRODUCTION OF POTATOES, 1890-1 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Fed. Terr.	C'wealth.

1915-16 ...	44,420	173,821	7,439	12,991	14,118	79,890	25	332,704
1916-17 ...	45,296	187,992	19,457	20,343	16,841	67,038	35	357,002

3. **Average Yield per Acre.**—The suitability of the soil, climate, and general conditions for potato growing is evidenced by the satisfactory yields per acre which are generally obtained in Australia, except in the most northerly portions, the average yield during the past ten seasons being 2.66 tons per acre. The lowest average yield is that obtained in Queensland with an average of 1.79 tons for the same period.

Particulars for each State for the seasons 1901-2 and 1912-13 to 1916-17, and also for the past decennium, are given hereunder:—

**AVERAGE YIELD OF POTATOES PER ACRE, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	S.Aust.	W. Aust.	Tas.	Federal Terr.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

1912-13	2.69	4.02	1.86	3.85	2.62	2.95	1.35	3.25
1913-14	2.76	2.37	1.64	3.05	3.40	2.61	1.47	2.53
1914-15	1.34	2.89	1.91	2.36	3.08	2.50	1.88	2.41
1915-16	2.27	3.05	1.28	2.99	2.90	2.71	3.57	2.75
1916-17	2.02	2.55	2.18	4.29	2.88	1.95	2.92	2.38
Average for 10 Seasons 1907-17	2.30	2.81	1.79	2.93	3.07	2.90	1.83	2.66

4. **Value of Potato Crop.**—The estimated value of the potato crop of each State for the season 1916-17 is furnished in the following table, together with the value per acre:—

**VALUE OF POTATO CROP, 1916-17.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Federal Terr.	C'wealth.
Tot. value	£242,050	£657,972	£218,891	£86,033	£98,879	£382,117	£190	£1,686,132
Value per acre ...	£10/15/9	£8/18/9	£24/11/6	£18/3/3	£16/18/9	£11/2/8	£15/16/8	£11/5/0

5. **Relation to Population.**—The average production of potatoes per annum per head of the population of the Commonwealth for the past ten seasons has been approximately 184 lbs. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was nearly a ton, while for the past five seasons it has averaged about 7½ cwt. Details for the seasons 1901-2 and 1912-13 to 1916-17 are as follows:—

**POTATO PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	Federal Terr.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2 ...	28	104	44	42	30	655	...	84
1912-13 ...	52	138	26	77	44	368	22	88
1913-14 ...	59	125	25	75	56	398	22	88
1914-15 ...	22	132	24	41	46	392	8	72
1915-16 ...	24	122	11	30	44	397	14	67
1916-17 ...	24	134	29	47	55	335	16	73

6. **Commonwealth Imports and Exports.**—Under normal conditions there is usually a fairly large export trade in potatoes carried on by the Commonwealth, principally with New Zealand, the Pacific Islands, and the Philippine Islands. Thus, during 1907, out of a total export of 17,842 tons, 13,346 tons went to New Zealand, 2,102 tons to the Pacific

Islands, and 2,112 tons to the Philippine Islands. On the other hand, when the droughts of 1902, 1903, 1912 and 1914, had brought about a shortage in some of the States, importations from New Zealand took place to the extent of 11,471 tons and 2,279 tons in the first two years, 17,732 tons in 1912, and 16,342 tons in 1915-16. The quantities and values of the Commonwealth oversea imports and exports of potatoes for 1901 and for the past five years are shewn in the following table:—

**COMMONWEALTH IMPORTS AND EXPORTS OF POTATOES, 1901 and 1912 to 1916-17.**

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
1901 ...	17,655	86,067	6,028	45,485	— 11,627	— 40,582
1912 ...	18,151	163,249	1,619	15,331	— 16,532	— 147,918
1913 ...	996	5,537	1,689	12,012	— 693	— 6,475

### § 10. Other Root and Tuber Crops.

1. **Nature and Extent.**—Root crops, other than potatoes, are not extensively grown in Australia, the total area devoted to them for the season 1916-17 being only 16,618 acres. The principal of these crops are onions, mangolds, turnips, and "sweet potatoes" (*Batatas edulis*). Of these, onions are most largely grown in Victoria, mangolds in Tasmania and Victoria, turnips in Tasmania, and sweet potatoes in Queensland. The total area under onions in the Commonwealth during the season 1916-17 was 7,059 acres, giving a yield of 32,019 tons, and averaging 4.5 tons per acre. The area devoted in 1916-17 to root crops other than potatoes and onions, viz., 9,559 acres, yielded 65,480 tons, and gave an average of 6.9 tons per acre. The areas and yields here given are exclusive of the production of "market gardens," a reference to which will be made later.

2. **Commonwealth Imports and Exports.**—The only root crop, other than potatoes, in which any considerable overseas trade is carried on by the Commonwealth is that of onions. During the year 1915-16 overseas imports of onions amounted to 926 tons, obtained principally from the United States and New Zealand, of which total 720 tons went to New South Wales and 124 tons to Queensland. For the same year the exports of onions totalled 3881 tons, the principal countries to which they were exported being New Caledonia and other Pacific Islands. During 1916-17 only 27 tons were imported and 7806 tons exported. Of the latter 4105 tons were shipped to New Zealand, 1497 tons to Canada, 620 to the United States, and 593 tons to the Philippine Islands.

### § 11. Hay.

1. **Nature and Extent.**—As already stated, the most important crop of the Commonwealth is that of wheat grown for grain. Next to this in importance is the hay crop, which for the five seasons ended 1916-17 averaged nearly 19 per cent. of the area under crop in the Commonwealth, and for 1916-17, 15.9 per cent. In most European countries the hay crop consists almost entirely of meadow and other grasses, whilst in Australia a very large proportion of the area under hay comprises cereal crops, mainly wheat and oats. A considerable quantity of lucerne hay is also made, particularly in New South Wales and Queensland. The area under hay of all kinds in the several States from 1860 onwards is given hereunder:—

AREA UNDER HAY, 1860-1 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	N. T.	Fed. Terr.	C'wealth.

1905-6	438,036	591,771	37,425	317,924	124,906	64,350	...	...	1,574,412
1910-11	638,577	832,669	98,558	440,177	175,432	72,992	...	...	2,258,405
1911-12	651,866	860,205	61,299	521,182	344,032	77,466	18	2,220	2,518,288
1912-13	944,725	1,203,728	87,643	647,069	231,690	99,839	10	2,337	3,217,041
1913-14	798,978	977,684	76,469	568,550	246,640	84,138	61	2,152	2,754,672
1914-15	783,107	895,755	79,327	445,832	332,037	89,598	120	2,837	2,628,613
1915-16	1,107,228	1,330,455	55,174	709,831	290,036	103,216	140	1,691	3,597,771
1916-17	857,533	897,186	112,964	483,040	240,726	79,274	140	999	2,671,862

It will be seen from this table that in all the States marked fluctuations occur in the area devoted to the hay crop from year to year. These fluctuations are due to various causes, the principal being the variations in the relative prices of grain and hay.

and the favourableness or otherwise of the season for a grain crop. Thus, crops originally sown for grain are frequently cut for hay owing to the improved price of that commodity, or owing to the fact that the outlook for the due development of the grain is not satisfactory. On the other hand, improved grain prices or the prospect of a heavy yield will frequently cause crops originally intended for hay to be left for grain. The area under hay in the Commonwealth for the season 1915-16 was the highest on record, and that for 1912-13 the next.

2. **Kinds of Hay.**—Particulars concerning the kind of crop cut for hay are furnished in the returns prepared by five of the States. In the case of Tasmania the bulk consists of oaten hay; full particulars, however, are not available for that State.

Details for the past five seasons are given in the following table:—

**KINDS OF HAY GROWN, 1912-13 to 1916-17.**

It will be seen that wheat is the principal hay crop in New South Wales, South Australia, and Western Australia, oats in Victoria and Tasmania, and lucerne in Queensland.

3. **Total Yield.**—The Commonwealth hay crop for the season 1915-16 was the highest on record, and amounted to 5,633,988 tons. The second in importance was 3,955,311 tons for the season 1912-13, while the third was 3,507,589 tons for 1916-17. For many years past the State of Victoria has been the largest hay producer in the Commonwealth, and in the five seasons, 1912-13 to 1916-17 inclusive, accounted for 39 per cent. of the total production. The total yields of the several States from 1860 onwards are given hereunder:—

#### COMMONWEALTH HAY CROP, 1860-1 to 1916-17.

4. **Value of Hay Crop.**—The following table furnishes particulars concerning the total value and the value per acre of the hay crop of the several States of the Commonwealth for the season 1916-17:—

#### VALUE OF HAY CROP, 1916-17.

Particulars.	New South Wales.	Victoria.	Queensland.	South Aust.	Western Aust.	Tasmania.	N. T. 1915-16	Fed. Ter.	Commonwealth.
Total value ...	£3,833,280	£2,465,442	£730,951	£1,322,377	£1,067,999	£283,638	£2,500	£8,130	£9,714,317
Value per acre	£4/9/5	£2/15/0	£6/9/5	£2/14/9	£4/8/9	£3/11/7	£17/17/2	£8/2/9	£3/12/9

5. **Average Yield per Acre.**—The States of the Commonwealth in which the highest average yields per acre have been obtained during the last decennium are those of Tasmania and Queensland, these being also the States in which the smallest areas are devoted to this crop. For the same period the lowest yield for the Commonwealth as a whole was that of 13 cwt. per acre in 1914-15, the next lowest was in 1907-8 when the average yield was 19 cwt., while the highest was that of 31 cwt. in 1915-16. The average for the decennium was 25 cwt. Particulars for the several States for the seasons 1901-2 and 1912-13 to 1916-17, and the average for the last ten years, are given hereunder:—

## AVERAGE YIELD OF HAY PER ACRE, 1901-2 and 1912-13 to 1916-17.

Season.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tas.	N. T.	Fed. Terr.	Com'-wealth.

\* Average for 6 years.

6. **Relation to Population.**—During the past ten seasons the Commonwealth hay production per head of population has varied between 7 cwt. in 1914-15 and 22½ cwt. in 1915-16; averaging about 14 cwt. per head for the period. The State in which the hay production per head of population is highest is South Australia. Details for the seasons 1901-2 and 1912-13 to 1916-17 are given hereunder:—

## HAY PRODUCTION PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. T.	Fed. Terr.	C'wlth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

1916-17 ...	631	881	217	1,421	767	516	73	887	719

7. **Oversea Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not in such circumstances figure largely amongst the imports and exports of the Commonwealth. In 1901 and 1902, however, the exceptional demand which was created by the South African war brought about a fairly large export of hay and chaff to Natal and Cape Colony. These colonies also took a considerable quantity of Australian compressed fodder. During the year 1904, when the war between Japan and Russia was being carried on, the exports of compressed fodder to Hong Kong were valued at £42,759 and those to Japan at £23,608. The total value of the hay and chaff exported during 1901 was £406,455, as compared with only £15,107 in 1916-17, while the exports of compressed and other fodder, which amounted in value to £142,472 in 1904, had shrunk to £6,103 in 1916-17.

During 1916-17 the principal purchases of the hay and chaff exported from the Commonwealth were made by India, the Straits Settlements, and Ceylon, while the bulk of the compressed fodder was exported to the Philippine Islands and Ceylon.

Imports of hay and chaff into the Commonwealth are usually unimportant; for the year 1915-16, however, they totalled 36,725 tons, valued at £227,133, obtained principally from New Zealand and the United States, while for 1916-17 only 38 tons were imported, valued at £223.

8. **Hay Production in Other Countries.**—As already noted, the hay crops of most European countries consist of grasses of various kinds, amongst which clover, lucerne, sainfoin and rye grass occupy prominent places. The statistics of hay production in these countries are not prepared on a uniform basis, and consequently any attempt to furnish

extensive comparisons would be misleading. It may be noted, however, that in the United Kingdom the production of hay from clover, sainfoin, etc., for the year 1916, amounted to 5,487,369 tons from 3,053,064 acres, while from permanent grasses a yield of 9,710,503 tons of hay was obtained from 6,521,192 acres, giving a total of 15,197,872 tons from 9,574,256 acres, or about 32 cwt. per acre.

## § 12. Green Forage.

1. **Nature and Extent.**—In all the States of the Commonwealth a considerable area is devoted to the production of green forage, mainly in connection with the dairying industry. The total area so cropped during the season 1916-17 was 390,876 acres. Of the total, the New South Wales area represented about 38½ per cent., that in Queensland 30 per cent., while that in Victoria amounted to 12½ per cent. Under normal conditions the principal crops cut for green forage are maize, sorghum, oats, barley, rye, rape, and lucerne, while small quantities of sugar-cane also are so used. Particulars concerning the area under green forage in the several States from 1890 onwards are furnished in the following table:—

AREA UNDER GREEN FORAGE, 1890-1 to 1916-17.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. T.	Fed. Terr.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

\* Including area fed off.

2. **Value of Green Forage Crops.**—The value of these crops is variously estimated in the several States, and the Commonwealth total for the season 1913-14 may be taken approximately as £1,594,834, or about £3 5s. 7d. per acre; for 1914-15 as £2,019,365, or £1 9s. 10d. per acre; for 1915-16 as £2,348,532, or £4 11s. 1d. per acre, and for 1916-17 as £1,165,081, or £2 19s. 7d. per acre.

3. **Relation to Population.**—Particulars concerning the area under green forage per 1000 of the population of the Commonwealth and the several States for the seasons 1901-2 and 1912-13 to 1916-17 are given hereunder:—

AREA UNDER GREEN FORAGE PER 1000 OF POPULATION, 1901-2 and 1912 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. T.	Fed. Terr.	C'wealth.

\* Including area fed off.

## § 13. Sugar-Cane.

1. **Area.**—Sugar-cane is grown for sugar-making purposes in only two of the States of the Commonwealth, viz., Queensland and New South Wales, and much more extensively in the former than the latter. Thus, of the total area of 178,190 acres under sugar-cane in the Commonwealth for the season 1916-17, there were 167,221 acres, or about 94 per cent., in Queensland. Sugar-cane growing appears to have been started in the Commonwealth in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of twenty acres for the season 1862-3. In the following season the New South Wales records shew that an area of two acres was devoted to the crop in the mother State. The area under cane in New South Wales reached its maximum in 1895-6 with a total of 32,927 acres. It then fell continuously to 1902-3, when it was lower than for any previous season since 1889-90. From 1902-3 to 1906-7 it remained practically stationary; from that time, with slight variations, it gradually fell to 10,969 acres in 1916-17, the lowest area under sugar-cane since 1882-3. In Queensland, on the other hand, although fluctuations in area are in evidence throughout, the general trend has been one of satisfactory increase, the area under cane for the season 1916-17 being the highest on record, that for 1914-15 being the next highest and that for 1915-16 only a little short of it. The area under sugar-cane in the Commonwealth from 1865 is given in the following table:—

AREA UNDER SUGAR-CANE, 1865-6 to 1916-17.

Season.	New South Wales.		Queensland.		Commonwealth.		Total.
	Productive.	Unproductive.	Productive.	Unproductive.	Productive.	Unproductive.	
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	
1865-6	141		450		591		591

1916-17	5,223	5,746	75,914	91,307	81,137	97,053	178,190

\* Including 1 acre Northern Territory.

2. **Productive and Unproductive Cane.**—The areas given in the preceding table represent the area on which sugar-cane was grown during the seasons specified for purposes other than green forage. The whole area was not in any case cut for crushing during that season, there being always a considerable amount of young and "stand over" cane, as well as a small quantity required for plants. Though the season of 1916-17 has the highest recorded acreage under sugar-cane, 1914-15 the second, and 1915-16 the third, these positions are not maintained as regards the area cut for crushing, the 1914-15 season having the highest recorded area of productive cane, 1913-14 the second, and that of 1905-6 the third highest.

3. **Yield of Cane and Sugar.**—Queensland statistics of the production of sugar-cane are not available for dates prior to the season 1897-8. In that season the total for the Commonwealth was 1,073,883 tons, as against 2,271,558 tons for the record season

1913-14. The second highest yield was in the season 1914-15, with a total of 2,104,239 tons, the third highest being in 1910-11 when 2,000,758 tons of cane were cut. The average production of cane during the decennium ended 1916-17 was 194,789 tons. The three highest yields of sugar were in 1913-14, 1914-15, and 1910-11, the quantities being 265,029 tons, 245,876 tons and 230,871 tons respectively, the decennial average being 194,789 tons. Particulars relative to the total yields of cane and sugar for a series of years are as follows:—

**YIELD OF SUGAR-CANE AND CANE-SUGAR, 1900-1 to 1916-17.**

Season.	New South Wales.		Queensland.		Commonwealth.

\* Including 15 tons Northern Territory.

Large quantities of molasses are produced as a by-product in the sugar mills, details giving the quantity produced and proportions used for distilling, fuel, manure and other purposes for a series of years will be found in Section XIII.—“Manufacturing Industries,” § 8, 17.

**4. Average Yields of Cane and Sugar per Acre.**—The average yield per acre of productive cane is much higher in New South Wales than in Queensland, the average during the last decade being 26.20 tons for the former and 16.77 for the latter State. During the nine seasons 1901-2 to 1909-10 the yield remained practically constant in New South Wales at about 21 tons per acre, except in 1907-8 when the average reached nearly 28 tons. For the past seven years, however, the average yield per acre in this State has shewn an upward tendency, reaching over 30 tons during 1913-14 and 1914-15. In Queensland the average yield per acre for 1910-11, viz., 19.45 tons, was by far the highest recorded for that State prior to 1913-14, when the average was over 20 tons to the acre. The 1916-17 season gives the highest recorded average, exceeding that of 1913-14 by over half a ton per acre.

The years shewing the highest average quantity of sugar produced per acre crushed in New South Wales were 1910-11, 1913-14 and 1914-15, the averages being 3.59, 3.58 and 3.33 tons per acre in the order named. In Queensland the highest average occurred in 1913-14 with 2.36 tons per acre; the next in order were those for 1916-17 and 1910-11 with 2.33 and 2.23 tons respectively.

**5. Quality of Cane.**—The quantity of cane required to produce a ton of sugar varies considerably not only with the district in which the cane is grown but also with the season. In Queensland, for instance, during the seasons 1902-3 to 1906-7 the sugar content of the cane crushed continuously diminished, so that while in 1902-3 the quantity of cane used in producing a ton of sugar was 8.38 tons, in the season 1906-7 the quantity required was 9.38 tons, the production in the former case being approximately 12 per cent. and in the latter 10½ per cent. of the weight of cane crushed. For the season 1907-8, the cane was of much better quality, and the quantity required to produce a ton of sugar was only 8.84 tons, the sugar content representing in this case somewhat more than 11½ per cent. of the weight of cane crushed. In 1908-9, owing in large

measure to the effect of frosts, the quantity of cane required to produce one ton of sugar was increased to 9.49 tons, the sugar thus representing only about 10½ per cent. of the weight of cane crushed, while in 1909-10 only 8.65 tons of cane were required to each ton of sugar, the sugar representing about 11½ per cent. of the weight of cane crushed. The especially favourable weather experienced throughout 1910 resulted in a very high average quantity of cane per acre being obtained, while the moisture which caused this led to a slight diminution in the saccharine density as compared with the previous year. During 1910-11 and the six following seasons the quantity of cane required to produce one ton of sugar was 8.73, 8.85, 8.79, 8.59, 8.51, 8.20 and 8.93 tons in the order named, the sugar produced representing about 11½ per cent. of the weight of cane crushed in each of those years, while the average quantity of sugar obtained per acre crushed was 2.23 tons in 1910-11, 1.81 in 1911-12, 1.45 in 1912-13, 2.36 in 1913-14, 2.09 in 1914-15, 1.49 in 1915-16, and 2.33 in 1916-17. It may be remarked in this connection that the systematic study of beet culture in European countries shewed that by suitable methods the sugar contents of the root could be greatly increased, and it is believed that a similar improvement can be effected in the yield from sugar-cane.

**AVERAGE YIELD OF SUGAR-CANE AND SUGAR PER ACRE, ALSO QUANTITY OF CANE, 1900-1 and 1905-6 to 1916-17.**

Average 10 Seasons	26.20	2.99	8.77	16.77	1.92	8.75	17.39	1.99	8.75

**6. Relation to Population.**—The sugar-cane production of the Commonwealth during the past five seasons has averaged about 7 cwt. per head of population. In Queensland, the principal sugar-producing State, the production of cane per head has ranged between 1½ tons in 1912-13 and 3 tons in 1913-14. Details for the period 1912-13 to 1916-17 are as follows:—

**SUGAR-CANE PRODUCTION PER 1000 OF POPULATION, 1912-13 to 1916-17.**

State.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.
	Tons.	Tons.	Tons.	Tons.	Tons.
New South Wales	79	102	98	84	77
Queensland	1,562	3,159	2,841	1,698	2,359
Commonwealth	240	466	426	266	353

**7. Sugar Bounties.**—The provision of bounties or similar aids to the sugar-growers of the Commonwealth early occupied the attention of the Commonwealth Parliament, the object in view being that of assisting the industry, and at the same time diminishing the employment of coloured labour in connection therewith. An account of the various Acts in connection with sugar bounties and sugar excise tariffs will be found on pages 394 to 396 of the Year Book No. 6. In 1912 the Sugar Excise Repeal Act and the Sugar Bounty Abolition Act were passed by the Federal Parliament,

conditionally on the Queensland Parliament approving of legislation prohibiting the employment of coloured labour in connection with the industry. The State Sugar Cultivation Act, the Sugar Growers Act, and the Sugar Growers' Employees Act, of 1913, having been approved of, the 1912 Federal Acts, which repeal all previous enactments in regard to excise on sugar and bounty on cane, came into force by proclamation in July 1913.

**8. Sugar Purchase by Commonwealth Government.**—In June 1915 the Commonwealth Government assumed control of the Australian sugar output, paying the growers a fixed price of £21 per ton of raw sugar and disposing of the refined product at £29 7s. 6d. per ton, the object being to enable the consumer to purchase sugar of 1A grade at 3½d. per lb. This arrangement was continued from year to year until 1918, when an agreement was made for two years ending 30th June, 1920.

**9. Beet Sugar.**—During the past few years an effort has been made to revive the sugar-beet industry in Victoria. During 1910-11 £554 was paid as bounty on 1,847 tons of beet, £2,244 on 7,481 tons during 1911-12, £1,667 on 6,207 tons during 1912-13, and £1,001 on 3,330 tons during 1913-14. For the 1913 crop the State Government paid £1 per ton for all topped clean roots delivered at the Maffra factory, for the 1914 crop £1 1s. was paid, and £1 5s. for the 1915 and 1916 crops.

**10. Acreage and Yield of Sugar Beet.**—The following table shews the acreage under sugar beet, and quantity grown in Victoria during the past five seasons :—

**AREA AND PRODUCTION OF SUGAR BEET IN VICTORIA, 1912-13 to 1916-17.**

Average per acre ...	...	„	6.65	6.80	10.45	10.69	11.48

**11. Imports and Exports of Sugar.**—Notwithstanding the increase in the production of sugar in the Commonwealth during recent years, Australia's oversea import trade in cane sugar remained fairly extensive until 1906, the principal countries engaged in supplying this commodity being Java, Mauritius, and Fiji. In 1907 the exports of sugar exceeded the imports for the first time, the value of the net exports being £166,121. In 1908 and the following five years the imports exceeded the exports, while in 1914-15 the exports were the greater by 5,308 tons, representing a value of £138,474. In 1915-16 and 1916-17, however, the imports exceeded the exports by no less than 115,008 tons, valued at £1,847,310, in the former year, and by 80,128 tons, valued at £1,617,299, in the latter. The principal countries to which sugar is exported are the United Kingdom, the Pacific Islands, and New Zealand, but the bulk of the sugar exported from the Commonwealth is not of Australian origin, being merely a re-export of sugar produced elsewhere. Thus, of 1,033 tons exported during 1916-17, only 41 tons were of Australian origin. The sugar so re-exported comes mainly from Fiji and Java. Particulars concerning the imports and exports of cane sugar for 1901 and the past five years are as follows :—

**IMPORTS AND EXPORTS OF CANE SUGAR, 1901 and 1912 to 1916-17.**

Year.	Oversea Imports.		Oversea Exports.		Net Imports.

Note. — signifies net exports.

## § 14. Vineyards.

1. **Nature and Extent.**—The introduction of the vine into Australia has been set down by different investigators as at various dates, the years 1815 and 1828 being principally favoured. It would seem, however, that the vine was really brought out with the First Fleet which initiated the colonisation of Australia in 1788, and that consequently the Australian vine is as old as Australian settlement. As already mentioned, a report of Governor Hunter's gives the area under vines in 1797 as 8 acres. From New South Wales the vine spread to Victoria and South Australia, and these States have now far outstripped the mother State in the area which they have devoted to its cultivation. In Queensland and Western Australia also, vine-growing has been carried on for many years, but in neither State has the industry progressed with the rapidity attained in Victoria and South Australia. In Tasmania the climate is not favourable to the growth of grapes. The purposes for which grapes are grown in Australia are three in number, viz.—(i.) for wine-making, (ii.) for table use, (iii.) for drying. The total area under vines in the several States from 1860 onwards is given in the following table :—

COMMONWEALTH VINEYARDS, 1860-1 to 1916-17.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.		Acres.
1860-1 ...	1,584	1,138	—	3,180	335	There are no vineyards in Tasmania.	6,237

1895-6 ...	7,519	30,275	2,021	17,604	2,217		59,636
1900-1 ...	8,441	30,634	2,019	20,158	3,325		64,577
1905-6 ...	8,754	26,402	2,044	23,603	3,541		64,344
1910-11 ...	8,321	23,412	1,634	22,952	2,795		59,114
1911-12 ...	8,231	24,193	1,371	23,986	2,821		60,602
1912-13 ...	8,163	24,579	1,428	25,208	3,010		62,388
1913-14 ...	8,153	22,435	1,537	26,208	2,864		61,197
1914-15 ...	7,985	21,801	1,415	26,864	2,920		60,985
1915-16 ...	7,883	22,353	1,373	27,764	2,751		62,124
1916-17 ...	8,666	23,264	1,256	29,177	3,031		65,394

The area devoted to vines in the Commonwealth attained its maximum in the season 1904-5, when a total of 65,673 acres was reached. Each of the five following seasons shewed a decrease, the area in 1909-10 being only 58,151 acres. Since that year, however, the total has risen to 65,394 acres in 1916-17, being only 279 acres below that of 1904-5. South Australia is the only State where a steady annual increase has been recorded.

The wine-growing industry in Australia, more particularly in Victoria and New South Wales, received a severe check by various outbreaks of phylloxera. With a view to the eradication of this disease extensive uprooting of vineyards in the infested areas was undertaken, while further planting within such areas, except with phylloxera-resistant vines, was prohibited.

2. **Wine Production.**—The production of wine in Australia has not increased as rapidly as the suitability of soil and climate would appear to warrant. The cause of this is probably twofold, being in the first place due to the fact that the Australians are not a wine-drinking people and consequently do not provide a local market for this product, and in the second to the fact that the new and comparatively unknown wines of Australia find it difficult to establish a footing in the markets of the old world, owing to the competition of well-known brands. Active steps are being taken in various ways to bring the Australian wines under notice, and it may be confidently expected that when their

qualities are duly recognised the wine production of this country will exhibit a rapid development. Particulars concerning the quantity of wine produced in the several States during 1901-2 and the past five seasons are contained in the table given hereunder:—

**AUSTRALIAN WINE PRODUCTION, 1901-2 and 1912-13 to 1916-17.**

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	Gallons.	Gallons.	Gallons.	Gallons.	Gallons.	No production of wine in Tasmania.	Gallons.
1901-2 ...	868,479	1,981,475	148,835	2,631,563	185,735		5,816,087
1912-13 ...	719,100	1,206,111	54,627	3,974,838	149,132		6,103,808
1913-14 ...	561,100	1,121,491	58,897	2,759,665	208,738		4,709,891
1914-15 ...	549,140	605,636	51,164	1,507,196	162,190		2,875,326
1915-16 ...	571,000	1,880,367	59,008	3,709,878	166,820		5,887,073
1916-17 ...	628,950	1,802,660	23,171	2,951,048	220,439		5,126,268

**3. Relation to Population.**—In relation to population the area of the vineyards of the several States exhibits a well-marked decline from 1901 to 1908, the Commonwealth total having fallen during the period from 17 to 13 acres per 1000 of the population. During the following eight seasons, however, the relation remained stationary, with the exception of a slight further decline in the 1914-15 season. Details for the period are furnished in the succeeding table:—

**AREA OF VINEYARDS PER 1000 OF POPULATION, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1916-17 ...	5	17	2	67	10	...	13

**4. Imports and Exports.**—The principal countries of origin of wine imported into Australia are France, Spain, Portugal, and Italy, the greater portion of the sparkling wines coming from France and of still wines from Spain and Portugal. Particulars relative to the importations of wine into the Commonwealth during 1901 and the past five years are given hereunder:—

**COMMONWEALTH IMPORTS OF WINE, 1901 and 1912 to 1916-17.**

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
	Gallons.	Gallons.	Gallons.	£	£	£
1901	55,341	165,472	220,813	104,700	57,245	161,945
1912	67,851	85,874	153,725	132,830	36,377	169,207
1913	68,907	81,006	149,913	138,563	34,797	173,360
1914-15	28,179	71,633	99,812	56,998	32,953	89,951
1915-16	26,744	62,357	89,101	55,573	27,494	83,067
1916-17	18,659	47,741	66,400	39,212	26,497	65,709

The principal countries to which wine is exported from Australia are the United Kingdom and New Zealand, a small but fairly regular export trade being also carried on with India, Ceylon, Fiji, and the South Sea Islands. Details concerning the exports of wine from Australia during 1901 and the past five years are given in the following table:—

## COMMONWEALTH EXPORTS OF WINE, 1901 and 1912 to 1916-17.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.

1915-16	3,638	726,113	729,751	7,001	113,593	120,599
1916-17	2,919	603,523	606,442	5,426	106,200	111,626

The sparkling wine included in the foregoing table consists largely of foreign wine re-exported.

**5. Other Viticultural Products.**—In addition to grapes for wine-making purposes, large quantities are grown in all the States for table use, while, particularly in Victoria and South Australia, the drying of raisins and currants is also carried on. The quantities of table grapes grown in the several States during 1901-2 and the past five seasons are as follows:—

## TABLE GRAPES, 1901-2 and 1912-13 to 1916-17.

† Incomplete.

‡ Average for five seasons.

From the above figures it will be noted that substantial progress has been made in the production of raisins and currants in the Commonwealth, the increase being in evidence in each of the four contributing States. From 1901 to 1916-17 the percentage of increase in the production of raisins and currants in Victoria was 419 and 2510 respectively, and in South Australia 385 and 1369 per cent. The highly satisfactory increase in regard to currants was largely due to improved methods of cultivation, while the introduction of cincturing, or ringing, the vines was also responsible for an increased yield.

**6. Imports and Exports.**—The following table gives the oversea imports and exports of raisins and currants during 1903 and the past five years:—

**COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF RAISINS AND CURRANTS,  
1903 and 1912 to 1916-17.**

1916-17 ...	2,416	54	6,525,426	165,006	6,523,010	164,952

Note. — Signifies net imports.

Except in the years 1904, 1907, 1908, which followed abnormally good seasons, the imports of raisins exceeded the exports for all years prior to 1912. During the past five years, however, the exports exceeded the imports, the average for the quinquennium being 3,316,047 lbs., valued at £87,213. The increased production of currants in Australia in recent years had a tendency to gradually reduce the importation and increase the exportation of currants, the first year shewing a margin in favour of exports being 1912, when an excess of 136,212 lbs., valued at £1276, was recorded. In 1916-17 the excess was no less than 6,523,010 lbs., valued at £164,952.

## § 15. Orchards and Fruit Gardens.

1. **Nature and Extent.**—Fruit-growing has made rapid progress in the Commonwealth during recent years, the area devoted thereto having increased in the past ten years by no less than 94,474 acres. The States in which the increase is most marked are:—Victoria, 29,066 acres; Tasmania, 20,330 acres; New South Wales, 14,183 acres; and Queensland, 11,044 acres. During the same period the South Australian fruit-growing area increased 10,595 acres, while that in Western Australia exhibited an increase of 9,230 acres. The increased areas in Tasmania and Western Australia are mainly due to extensive plantings of apple trees with a view to the possibilities of the London market for fresh fruit. The total area devoted to orchards and fruit gardens in the several States is given hereunder:—

**COMMONWEALTH ORCHARDS AND FRUIT GARDENS, 1901-2 and 1912-13 to 1916-17.**

The varieties of fruit grown differ materially in various parts of the several States, and range between such fruits as the pineapple, paw-paw, mango, and guava of the

tropics, and the strawberry, the raspberry, and the currant of the colder parts of the temperate zone. The principal varieties grown in Victoria are the apple, plum, peach, apricot, cherry, and pear. In New South Wales, citrus fruits (orange, lemon, etc.), occupy the leading position, although apples, pears, peaches, plums, and apricots are also extensively grown. In Queensland the banana, the orange, the pineapple, the apple, the peach, the mango, and the plum are the varieties most largely grown. In South Australia, in addition to the apple, pear, peach, apricot, plum, orange, and lemon, the almond and the olive are also largely grown. In Western Australia, the apple, orange, peach, pear, plum, fig, and apricot are the sorts chiefly grown, while in Tasmania, although the apple represents over four-fifths of the area in that State devoted to fruit-growing, small fruits, such as the currant, raspberry, and gooseberry, are very extensively grown, and the balance of the area is mainly occupied with the pear, plum, apricot, peach, and cherry. The following table gives the acreage under the principal kinds of fruit grown, and the quantity and value of fruit produced. The acreages shewn are exclusive of young trees not yet bearing. The acreages for each kind of fruit in Victoria are not available:—

**PARTICULARS OF THE PRINCIPAL KINDS OF FRUIT GROWN IN THE SEVERAL STATES OF THE COMMONWEALTH DURING THE SEASON 1916-17.**

\* Including Federal Territory, 26 acres, value £500. † Cases. ‡ Bushels.

2. **Relation to Population.**—The acreage of orchards and fruit gardens of the Commonwealth in relation to population has increased during the last fifteen years to an extent which more than compensates for the decline experienced in the case of vineyards. Taking the two in conjunction, the relative area under vineyards and orchards has, during the period, considerably increased, averaging 55 acres per 1000 of population in 1901-2, and 66 in 1916-17. Details for orchards and fruit gardens for 1901-2 and the past five seasons are as follows:—

**AREA OF ORCHARDS AND FRUIT GARDENS PER 1000 OF POPULATION,  
1901-2 and 1912-13 to 1916-17.**

**3. Commonwealth Imports and Exports.**—A considerable fruit trade, both import and export, is carried on by the Commonwealth with oversea countries, the major portion of the importations consisting of dried fruits, while the bulk of the exports is made up of fresh fruits. Amongst the imports, the principal dried fruits are currants, dates, sultanas, and raisins, and the principal fresh fruits bananas, oranges, lemons, and apples. In normal times the currants imported have been mainly from Greece, the dates from Arabia, Asia Minor and Persia, the raisins mainly from Spain. Of the fresh fruits imported during 1916-17, the bananas were chiefly from Fiji, the oranges and lemons from the United States and Italy, and the apples from the United States and Canada. In 1907 a considerable increase in the trade in Australian dried fruits took place, the total export for the year being valued at £76,872, of which £71,506 represented Australian fruits and £5,366 re-exports of foreign fruits. In 1908 the export declined to £35,359, of which £33,111 represented Australian fruits, and £2,248 re-exports of foreign fruits. There was a further decline in 1909, when the total value was only £13,013, made up of £11,826 of Australian produce, and £1,187 of re-exports. There was a small increase in the exports in 1910 and 1911, the total for the latter year amounting to £23,900; in 1912 there was a further and more substantial increase, the value of dried fruits exported being £48,012. In 1913 the export value was £32,099; in 1914-15 £35,691; and in 1915-16 £244,069. In 1916-17 the value of dried fruits exported was the largest on record, viz., £372,712; of this sum £367,456 represented Australian produce, and the balance of £5,256 re-exports of foreign fruits. The principal consignees of Australian dried fruits exported were United Kingdom and New Zealand. The fresh fruits exported during the year were valued at £141,583, and consisted mainly of apples. These were all of Australian origin with the exception of re-exports valued at £1,828. The principal countries to which these were sent were the United Kingdom, New Zealand and the East Indies.

Particulars concerning the oversea imports and exports of dried fruits for 1901 and the last five years are as follows:—

Note. — Signifies net imports.

\* Not available.

4. **Jams and Jellies.**—A considerable oversea trade in jams and jellies is now carried on by the Commonwealth, the value of the imports for the year 1916-17 amounting to £6,210, and of the exports to £949,112. The country of origin of the bulk of the importations is the United Kingdom, while the destinations of the exports are principally the United Kingdom, India and Pacific Islands. Particulars relative to imports and exports for 1901 and the last five years are as follow :—

**COMMONWEALTH OVERSEA TRADE IN JAMS AND JELLIES,  
1901 AND 1912 TO 1916-17.**

Year.	Oversea Imports.		Oversea Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

1914-15	438,756	11,824	4,770,117	90,909	4,331,361	79,085
1915-16	288,165	9,087	22,849,553	437,144	22,561,388	428,057
1916-17	152,260	6,210	45,074,352	949,112	44,922,092	942,902

5. **Preserved Fruit.**—Details concerning the quantities and values of preserved fruit imported into and exported from the Commonwealth cannot readily be obtained, owing to the fact that in the Customs returns particulars concerning fruit and vegetables are in certain cases combined. The total value of fruit and vegetables, other than fresh fruits, dried fruits, potatoes, and onions, imported into Australia during 1916-17 was £56,003, and the corresponding value of exports was £139,230.

## § 16. Minor Crops.

1. **Nature and Extent.**—In addition to the leading crops which in the foregoing pages have been dealt with in some detail, there are many others which, owing either to their nature, or to the fact that their cultivation has advanced but little beyond the experimental stage, do not occupy so prominent a position. Some of the more important of these are included under the headings—Market Gardens, Pumpkins and Melons, Turnips, Mangolds, Nurseries, Grass Seed, Tobacco, Hops, and Millet. Cotton-growing has in recent years received some attention in the tropical portions of the Commonwealth, although the industry cannot yet be said to be beyond the experimental stage.

The total area in the Commonwealth during the season 1916-17 devoted to crops not dealt with in previous sections was 67,023 acres, of which market gardens accounted for 27,884 acres, or more than 41 %.

**2. Market Gardens.**—Under this head are included all areas on which mixed vegetables are grown. Where considerable areas are devoted to the production of one vegetable, such for instance as the potato, the onion, the melon, the tomato, etc., the figures are usually not included with market gardens, but are shewn either under some specific head, or under some general head as "Other Root Crops," or "All Other Crops." The area under market gardens in the several States of the Commonwealth during 1901-2 and each of the last five seasons is given in the table hereunder:—

**COMMONWEALTH MARKET GARDENS, 1901-2 and 1912-13 to 1916-17.**

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Federal Terr.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2 ...	7,834	8,752	2,328	9,005	2,142	1,746	...	...	31,807
1912-13 ...	9,836	10,414	2,386	2,857	2,924	1,458	*50	11	29,936
1913-14 ...	10,585	10,777	2,611	2,265	2,851	† 769	60	22	29,940
1914-15 ...	10,475	12,935	2,648	1,830	2,785	628	60	27	31,388
1915-16 ...	10,940	11,379	2,330	1,712	2,787	435	...	27	29,610
1916-17 ...	10,683	10,746	2,305	1,522	2,153	448	...	27	27,884

\* Included with South Australia prior to 1910-11. † Crops, other than Market Gardens, were included in previous years.

The area for 1916-17 was in excess of that for 1901-2 in New South Wales, Victoria, and Western Australia. In South Australia the falling-off is more apparent than real, being in large part due to a change in the classification of crops introduced in connection with the new system of collection which came into force for 1907-8. It is believed that the figures given for the earlier years are considerably in excess of the reality. During the past five seasons there has been very little variation in the total area of market gardens in the Commonwealth as a whole. Comparing the earliest of these with the latest, New South Wales and Victoria shew an increase, viz., 847 and 332 acres respectively, while South Australia and Western Australia shew a decrease of 1,335 and 771 acres respectively. For the Commonwealth as a whole a corresponding decrease of 2,052 acres is shewn.

**3. Grass Seed.**—The total area under this crop during 1916-17, exclusive of New South Wales, for which State no figures are available, was 4,522 acres, of which 1,769 acres were in Victoria, 1,588 acres in Queensland, and 1,155 acres in Tasmania. The total yield for 1916-17, excluding New South Wales, was 40,754 bushels.

**4. Tobacco.**—Tobacco-growing is an industry which has experienced marked fluctuations, although at one time it promised to occupy an important place amongst the agricultural industries of the Commonwealth. Thus, as early as the season 1888-9 the area under this crop amounted to as much as 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise of importance was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2000 acres, and that in Queensland to over 1,000 acres, the total area for the season 1916-17 had declined to 1,342 acres, distributed as follows:—New South Wales, 952 acres; Victoria, 73 acres; and Queensland, 317 acres. This decline in production appears to have been due to the comparatively small demand which existed in Australia for the locally-produced leaf, and to the fact that the cost of production and preparation in the Commonwealth prevented the Australian leaf from obtaining a footing in outside markets. Possibly under more

favourable circumstances, and with greater attention given to the production of leaf of the best quality only, the industry may eventually assume considerable proportions. In all the States in which its cultivation has been tried, the soil and climate appear to be very suitable for the growth of the plant, and the enormous importations of tobacco in its various forms into the Commonwealth furnish an indication of the extensive local market which exists for an article grown and prepared in such a manner as to meet the requirements of consumers. The value of the net importations of tobacco into the Commonwealth during the year 1916-17 amounted to £913,391, comprising unmanufactured tobacco £828,686, cigars £84,721, cigarettes £37,424, and snuff £907, while manufactured tobacco shewed a balance in favour of exports amounting to £38,347.

5. **Pumpkins and Melons.**—The total area under this crop in the Commonwealth during 1916-17 was 18,773 acres, of which 3,119 acres were in New South Wales, 2,064 acres in Victoria, 12,566 acres in Queensland, 659 acres in Western Australia, and 345 in South Australia. The production amounted to 11,504; 11,103; 37,511; 1,674; and 2,253 tons respectively.

6. **Hops.**—Hop-growing in the Commonwealth is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for the season 1916-17 being 1,331 acres, of which 1,241 acres were in Tasmania, and 87 acres in Victoria; a small area of 3 acres was also grown in South Australia. The Tasmanian area, though still small, has increased rapidly during the past fourteen years, the total for the season 1901-2 being only 599 acres. On the other hand, the Victorian area, which in 1901-2, was 307 acres, had diminished to 87 acres in 1916-17. The cultivation of hops was much more extensive in Victoria some thirty years ago than at present, the area devoted to this crop in 1883-4 being no less than 1758 acres. During the year 1916-17 the net importations of hops into the Commonwealth represented a weight of 645,256 lbs. and a value of £31,592. The total value of the net importations into Australia during the past ten years amounted to £544,100, thus indicating the existence of a regular and extensive local demand.

7. **Millet.**—Millet appears in the statistical records of three of the Commonwealth States. The total area devoted thereto in 1916-17 was 3,931 acres, of which 1,720 acres were in New South Wales, 1143 in Victoria, 1063 in Queensland and 5 in the Northern Territory. The particulars here given relate to millet grown for grain and fibre. That grown for green forage is dealt with in the section relating thereto.

8. **Nurseries.**—In all the States somewhat extensive areas are devoted to nurseries for raising plants, trees, etc., but statistics concerning the area so occupied for flowers, fruit trees, etc., are only available for New South Wales, Victoria and Western Australia. During 1916-17 the area in those States was 571; 1,162; and 93 acres respectively. Statistics so far as they relate to forestry are given elsewhere.

9. **Cotton.**—Cotton-growing on a small scale has been tried in Queensland, but so far without very marked success. In 1902 8 acres were devoted to this crop, in 1907 300 acres were under cultivation, and in 1911 the maximum either in regard to area or production was reached, an area of 605 acres producing 186,894 lbs. unginned cotton. A gradual falling-off has since been experienced, and in 1916 the area was only 76 acres with a production of 24,264 lbs. cotton. Special efforts have recently been made to encourage the growth of cotton in Queensland, and the Agricultural Department of that State in 1916 distributed to upwards of 300 intending growers sufficient seed to plant about 800 acres. Hopes are entertained that with the invention of a mechanical device for the picking of the cotton the industry will become firmly established, since the soil and conditions appear eminently suitable for the growth of this crop. Small areas in the Northern Territory have also been planted with cotton. The tropical portions of Western Australia have also long been regarded as suitable for its cultivation.

10. **Coffee.**—Queensland is the only State of the Commonwealth in which coffee-growing has been at all extensively tried, and here the results have up to the present time been far from satisfactory. The total area devoted to this crop reached its highest point in the season 1901-2, when an area of 547 acres was recorded. Since then the area continuously declined to 1906-7, when it was as low as 256 acres. During the season 1907-8 the area increased to 304 acres, declining to 285 acres in 1908-9, 200 acres in 1910-11, 198 acres in 1911-12, 196 acres in 1912-13, 165 acres in 1913-14, 150 acres in 1914-15, and 91 acres in 1915-16. During 1916-17, 103 acres were under cultivation, the yield amounting to 15,530 lbs., valued at £582.

11. **Other Crops.**—Miscellaneous small crops are grown in the several States, amongst which may be mentioned tomatoes, rhubarb, artichokes, arrowroot, chicory, and flowers.

### § 17. Bounties on Agricultural Products.

1. **General.**—The Bounties Act of 1907 passed by the Federal Parliament in order to encourage the manufacture and production of certain articles in the Commonwealth, included among the items on which bonuses were payable several agricultural products. Under an Act passed in 1912 the provisions of the 1907 Act in respect of certain items were renewed. Products of the soil on which these bounties were payable are as follows:—

#### BOUNTIES ON AGRICULTURAL PRODUCTS.

Article.	Period dating from 1st July, 1907, during or in respect of which Bounty may be paid.	Rates of Bounty.	Maximum amounts which may be assigned in any one year.
Cotton, ginned ... ..	8 years	10 % on market value	£ 6,000
Fibres—			
New Zealand flax ... ..	10 "	10 " "	3,000
Flax and hemp ... ..	10 "	10 " "	8,000
Jute ... ..	10 "	20 " "	9,000
Sisal hemp ... ..	10 "	10 " "	3,000
Oil materials supplied to an oil factory for the manufacture of oil—			
Cottonseed ... ..	8 "	10 " "	1,000
Linseed (flax seed) ... ..	10 "	10 " "	5,000
Rice, uncleaned ... ..	10 "	20s. per ton	1,000
Coffee, raw, as prescribed ... ..	8 "	1d. per lb.	1,500
Tobacco leaf for the manufacture of cigars, high grade, of a quality to be prescribed ... ..	10 "	2d. "	4,000
Fruits—			
Dates (dried)* ... ..	15 "	1d. "	1,000
Dried (except currants and raisins) or candied, and exported	10 "	10 % on market value	6,000

\* Any unexpended amount assigned in any year to be available for the years following.

At the present time the only one of these bounties still in force is that relating to dates.

Although the rate of bonus on the several articles was fairly liberal, the bounties were not availed of to any great extent, as will be seen from the following table, which gives particulars as to the quantity of the articles raised and the amounts paid as bounties in respect thereto for the five financial years ended 1916-17 :—

**PARTICULARS OF BOUNTIES PAID ON AGRICULTURAL PRODUCTS (OTHER THAN SUGAR), 1912-13 to 1916-17.**

Article.	Quantity produced on which Bounties were paid.					Amount paid as Bounties.				
	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.	1912-13.	1913-14.	1914-15.	1915-16.	1916-17.

During the year 1916-17 the total amount paid in respect of flax and hemp was claimed by the State of Victoria. The bounty paid for tobacco leaf was paid to New South Wales and Queensland, the amounts being £16 and £472 respectively. Victoria South Australia, and Tasmania claimed the bonuses on dried fruits, the amounts being £80, £1,698, and £285 in the order named.

No bounties were paid on New Zealand flax, jute, or uncleaned rice, nor have any yet been paid on dates.

## § 18. Fertilisers.

1. **General.**—In the early days of settlement and cultivation in the Commonwealth, scientific cultivation was in a much less developed state than it is to-day. The early farmers were neither under the necessity, nor in fact, aware of the necessity, of supplying the constituents to the soil demanded by each class of crop. The widely divergent character of the soils in the Commonwealth, their degeneration by repeated cropping, the limitations of climatic conditions, the difficulties of following any desired order of rotation of crops, all rendered it essential to give attention to artificial manuring. The introduction of the modern seed-drill, acting also as a fertiliser distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been made productive. There is reason to believe that this feature will be even more strikingly characteristic of the future.

2. **Fertilisers Acts.**—In order to protect the interests of users of artificial manures legislation has been passed in each of the States, regulating the sale and preventing the adulteration of fertilisers. A list of these Acts and their main features will be found in Year Book No. 6. (pages 406 and 407).

3. **Imports.**—The local production of artificial manures has assumed large proportions during the last few years, though considerable quantities are still imported. The importation of fertilisers has increased over 200 per cent. since 1901. The chief items, as regards both quantity and value, are those relating to phosphates, a fertiliser which has proved itself to be very suitable for the growing of cereals in Australian

soils. With the exception of very small quantities from the United Kingdom and New Zealand, the whole of the manufactured superphosphates imported during 1916-17 was obtained from Japan. The colony of Gilbert and Ellice Islands, with 46 per cent., was the principal contributor of rock phosphates; Christmas Island contributed 33 per cent., and the balance, about 21 per cent., was obtained from other South Sea Islands. All guano, except 720 cwt. from the United Kingdom, came from the Pacific Islands.

The imports of artificial manures during the last five years are given in the following table. It will be noticed that the quantity of rock phosphates imported since 1912 shews an increase amounting to 81 per cent. The imports were consistently large during the last four years. The imports of manufactured superphosphates shewed an increase of about 50 per cent. during 1910, for 1911 there was a further increase of some 5 per cent., but during 1912 and the three following years there was a decrease, the falling-off in 1915-16 and 1916-17 being particularly heavy.

#### COMMONWEALTH IMPORTS OF FERTILISERS, 1912 to 1916-17.

Fertiliser.		1912.	1913.	1914-15.	1915-16.	1916-17.

4. Exports.—The subjoined table shews the exports of artificial manures for the years 1912 to 1916-17. Practically the whole of these fertilisers are manufactured locally, and are shipped mainly to New Zealand, Java, Japan and the Pacific Islands:—

#### COMMONWEALTH EXPORTS OF FERTILISERS, 1912 to 1916-17.

GRAPHS SHEWING THE AREA UNDER THE PRINCIPAL CROPS IN THE  
COMMONWEALTH FROM 1860-1 to 1916-17.

(See pages—for wheat, 341; oats, 351; maize, 354; barley, 358; hay, 366; sugar-cane, 371; and vineyards, 375.)

EXPLANATION OF GRAPHS.—The of base each small square represents an interval of one year, while the vertical height represents a number of acres, varying with the nature of the crop in accordance with the scale given on the left-hand of the diagram. The height of each graph above the base line denotes, for the crop to which it relates, the total area under cultivation in the Commonwealth during the successive seasons.

GRAPHS SHEWING THE PRODUCTION OF THE PRINCIPAL CROPS IN THE COMMONWEALTH FROM 1860-1 TO 1916-17.

See pages—for wheat, 341; oats, 351; maize, 354; barley, 358; and hay, 366.)

**EXPLANATION OF GRAPHS.**—In this diagram a separate base line is provided for each of the crops dealt with. In each instance the base of a small square represents an interval of one year, the vertical height of such square representing in the case of the wheat graph, 10,000,000 bushels; oats, 2,000,000 bushels; barley, 500,000 bushels; maize, 2,000,000 bushels; and hay, 500,000 tons. The height of each graph above its base line denotes the aggregate yield in the Commonwealth of that particular crop during the successive seasons.

5. **Statistics of Use of Fertilisers.**—The statistics available in connection with the use of manures in the Commonwealth for a series of years refer to all the States with the exception of Queensland; those for that State were collected for the first time for 1915-16. Particulars concerning New South Wales are given hereunder:—

**FERTILISERS USED IN NEW SOUTH WALES, 1912-13 to 1916-17.**

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage on Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1912-13 ...	3,737,085	1,642,078	43.94	170,312	38,918
1913-14 ...	4,567,592	2,224,623	48.71	166,503	50,476
1914-15 ...	4,807,001	2,329,819	48.47	168,450	55,169
1915-16 ...	5,796,376	2,753,301	47.50	177,788	56,621
1916-17 ...	5,164,434	2,352,180	45.55	166,374	50,704

Particulars for Victoria for the past five seasons are as follows:—

**FERTILISERS USED IN VICTORIA, 1912-13 to 1916-17.**

Season.	Total Area of Crops.	Farmers Using Manure.	Area Manured.		Manure Used.	
			Aggregate.	Percentage on Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	No.	Acres.	%	Tons.	Tons.
1912-13 ...	4,079,356	29,524	3,029,418	74.26	222,253	94,010
1913-14 ...	4,391,321	30,610	3,401,013	77.45	219,423	105,612
1914-15 ...	4,622,759	31,874	3,728,279	80.65	209,534	117,935
1915-16 ...	5,711,265	33,378	4,336,252	75.92	187,602	128,667
1916-17 ...	4,851,335	33,165	3,870,742	79.79	181,268	117,812

During 1915-16, 25,166 acres were manured in Queensland, 43,483 loads of natural and 7,608 tons of artificial manure being used. During 1916-17, 22,145 acres were manured, 34,811 loads of natural and 6,869 tons of artificial manure were used, and the percentage of area manured on total area under crop was 3.45 for the former and 2.50 for the latter season.

The figures relating to the use of fertilisers in South Australia are shewn in the table below:—

**FERTILISERS USED IN SOUTH AUSTRALIA, 1912-13 to 1916-17.**

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage on Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1912-13 ...	3,062,998	2,603,136	84.99	111,434	91,607
1913-14 ...	3,169,559	2,584,814	81.55	100,435	97,023
1914-15 ...	3,282,364	2,722,349	82.94	103,537	96,812
1915-16 ...	3,763,570	3,112,462	82.70	90,142	102,685
1916-17 ...	3,627,477	2,872,571	79.19	101,032	96,892

Corresponding particulars relative to Western Australia for the seasons 1912-13 to 1916-17 are given in the following table:—

**FERTILISERS USED IN WESTERN AUSTRALIA, 1912-13 to 1916-17.**

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1912-13...	1,199,991	1,120,334	93.36	55,085	47,563
1913-14...	1,537,923	1,459,218	94.88	58,390	58,962
1914-15...	1,867,547	1,808,504	96.84	54,245	67,839

1916-17...	270,526	144,532	53.43	30,990	13,886

**6. Local Production of Fertilisers.**—Statistics relative to the local production of fertilisers are incomplete, and detailed returns for fertiliser factories other than bone mills are not available. The number of firms engaged in the manufacture of artificial manures in the Commonwealth at latest available date was 97, made up as follows:—New South Wales, 21; Victoria, 38; Queensland, 18; South Australia, 12; Western Australia, 5; and Tasmania, 3. Approximately complete returns of the quantities of fertilisers used in the various States being now available, a comparison with the imports and exports gives valuable information, but, as already mentioned, such particulars are only available for five of the States prior to 1915-16, and even then do not furnish the whole of the information necessary.

**7. Benefits Derived from the Use of Fertilisers.**—There is little doubt that the increasing use throughout the Commonwealth of fertilisers, natural and artificial, combined with the greater attention being devoted to fallowing and to the combination of sheep-farming with agriculture, is having the effect of improving the prospects of those dependent for a livelihood on the products of the soil. Reference has previously been made to the loss to the soil of phosphoric acid which the Commonwealth export of wheat and its milled products involves, and the necessity which thus

arises for returning this ingredient in some form. Similarly, other staple products exported impose their respective tolls upon the soil, and the increased use of fertilisers furnishes evidence that producers are alive to the necessity for making good the deficiency so arising.

## § 19. Ensilage.

**1. Value to Stockowners.**—The use of ensilage as a substitute for green fodder during periods of drought or spells of dry weather, or for winter use, is less extensive in Australia than the circumstances would appear to warrant. There is, however, a growing disposition on the part of dairy farmers to make silos on their holdings, as they find that dairy cattle eat ensilage greedily, and that by its means the output of milk, both in regard to quantity and quality, may be kept up long after the supply of ordinary green food is exhausted. Sheepbreeders are also recognising the fact that during protracted periods of dry weather the silo enables them to keep their stock in good condition, and that lambing can take place satisfactorily. Ensilage thus obviates the expense of travelling or trucking sheep for hundreds of miles to get beyond the drought area, or the equally costly and even ruinous alternative of providing chaff for food at high prices and costly freight. In the rearing of lambs for the London market, ensilage appears to be destined to play an important part, as the lambs thrive upon it much better than upon dry food. By the judicious economising of the surplus growth of green food with the use of the silo, farmers and squatters can carry more stock on their holdings than they otherwise would be justified in doing. Not only is the great waste of superabundant food thus avoided, but it becomes possible to change into a succulent and nutritious food much growth that in any other state would not be eaten by stock. Thus such vegetation as marsh mallows, thistles, weeds of all sorts, and even the swamp reed (*Arundo phragmites*), which grows in great quantities in lagoons, billabongs, and swamps, are all eaten with avidity when offered to stock in the form of ensilage. The pit and stack silos are rapidly being superseded by those built of red gum and hardwood or concrete. This is found to a great extent to obviate the loss sustained by mould, at the same time reducing the risk of fire. The silos vary in capacity from 40 to 130 tons. A portable silo made of iron has been devised in sections of such size and weight as to admit of ready handling. These silos can be increased in diameter or height by the addition of further sections.

**2. Government Assistance in the Production of Ensilage.**—The Government of Victoria, recognising that defective methods of making ensilage have often been adopted, has for some years been making special efforts to educate the farming community, by the issue of bulletins, lectures, etc., so that mistakes may be avoided, and the conditions essential for the production of good ensilage may be better appreciated. These conditions vary with the climate and with the locality. The Government also undertakes the erection of different types of silos on very liberal terms, repayment extending over a series of years. Experts erect the silos and give practical lessons as to packing them, etc. The New South Wales Government has, by giving advice in the "Agricultural Gazette," and by the issue of special bulletins, taken steps towards the education of the farmers. Silos also have been erected on the various experimental farms with a view to demonstrating the value of ensilage. No financial assistance is, however, given in New South Wales in this connection.

**3. Quantity Made.**—Particulars concerning the number of silos and the quantity of ensilage made in the several States of the Commonwealth in the seasons 1912-13 to 1916-17, are furnished in the following table:—

## COMMONWEALTH ENSILAGE-MAKING, 1912-13 to 1916-17.

\* No. of holdings on which ensilage was made.

Following the drought of 1902-3 greater attention was paid to ensilage than was previously the case, and during the four seasons ended 1909-10 a continuous and fairly rapid increase was in evidence in all the States, both in the number of holdings on which ensilage was made, and in the quantity produced. The following five seasons, however, shewed a falling-off, but the reduction cannot be accepted as an indication of a lessening of appreciation of the benefits of ensilage, but rather of the fact that stocks had not been drawn upon to any great extent during the previous seasons. The accumulated stocks proved of very great value during the 1914 drought, though far below what would have been the case if more attention had been paid to ensilage-making during the previous years of surplus green food. A very substantial increase took place in 1915-16, both in the holdings on which ensilage was made and in the quantity produced, but 1916-17 returns shew a falling-off in all the States with the exception of Queensland.

## § 20. Agricultural Colleges and Experimental Farms.

1. **Introduction.**—In most of the States, agricultural colleges and experimental farms have been established with a view to promoting agriculture and to establishing improved and more scientific systems of stock-breeding and dairying. In these colleges, and on some of the farms, provision is made for the accommodation of pupils, to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilisers are made, manures are tested, and elementary veterinary science, etc., is taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of shewing that it is practicable to produce certain crops in a given place, but also to shew how it is possible to make farming pay best in that locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder; in cheese and butter making; in the management, breeding, and preparation for the market of live stock; in the eradication of pests and weeds; and in carpenters', blacksmiths', and other trades.

Travelling expert lecturers are sent to the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins on matters of importance at special seasons.

2. **Particulars of Agricultural Colleges and Experimental Farms.**—In the tables given herewith, particulars of agricultural colleges and experimental farms in the several States of the Commonwealth in 1916-17 are shewn.

**PARTICULARS OF AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS IN THE SEVERAL STATES OF THE COMMONWEALTH DURING THE SEASON 1916-17.**

\* Closed temporarily to students during war. † Incomplete.

3. New South Wales.—In order to meet the demand for agricultural training, and for the purpose of conducting experiments in various branches of agriculture and of disseminating agricultural knowledge, an agricultural college and farm and twenty-three experimental farms, including two viticultural nurseries and an apiary, have been established by the New South Wales Government. Theoretical instruction in agriculture,

with practical illustrations, forms part of the curriculum of the Sydney Technical College. The School of Agriculture in the Sydney University, which has been established for seven years, is doing very satisfactory work. At the Hurlstone Continuation College there is a special course in both theoretical and practical agriculture for teachers. Instruction in "nature knowledge" is given in the State primary schools, many of which have their own experimental plots. As a means of further encouraging the study of agriculture, the Department of Public Instruction has a travelling inspector in agriculture, whose duty it is to visit the country and metropolitan schools, lecturing on the value, necessity, and advantages of agricultural knowledge, and giving practical demonstrations wherever practicable.

4. **Victoria.**—In 1884, the Agricultural Colleges Act, passed to make provision for the establishment of agricultural colleges and experimental farms in Victoria, provided for the permanent reservation from sale of 150,000 acres of Crown lands by way of endowment of agricultural colleges and experimental farms, which, together with other lands reserved as sites for such institutions prior to the passing of the Act, are vested in three trustees appointed by the Governor. Provision was made for the appointment of a Council of Agricultural Education, consisting of eleven members, five of whom are elected by the members of the Agricultural Societies of the State, five are nominated by the Governor, whilst the Secretary for Agriculture is also a member of the Council and its Treasurer. Two agricultural colleges and five experimental farms, orchards and vineyards were in existence in different parts of the State during 1916-17. There are five Agricultural High Schools under the control of the Education Department, while elementary experimental agriculture is taught at many of the State primary schools. Instruction in agriculture is also given at the technical schools at Melbourne and Bairnsdale.

5. **Queensland.**—Organised experimental agriculture in Queensland dates from the establishment of the Department of Agriculture and Stock, but such work as has been done in connection with stock-breeding, other than that carried on by private individuals, has been of later birth, and has been confined to dairy stock and draught horses. Agriculture in Queensland in the early nineties was upon the well-defined lines of the other States, so that the knowledge to be gained as to what could be profitably adapted to Queensland, with its varied climate and rainfall, covered a wide field. Instructors were appointed conversant with the different lines of agriculture, of which grain cultivation, dairying, fruit-growing, tobacco cultivation, and tropical agriculture, such as sugar, rubber and spices, are the most important. This has been followed by the establishment of an agricultural college, of farms in the temperate parts of the State, and of nurseries in the tropical parts. With wheaten grain, a system of experiments has been carried out for some years with the distinctive object of evolving a type of wheat adapted for Queensland, and as far as possible resistant to the attacks of rust. In dairying, a commencement was made by despatching to the different farming centres properly equipped travelling dairies with the latest appliances. The export of Queensland dairy produce has arisen through this effort. No travelling dairies are, however, now employed. A fruit farm has been established, at which fruits suitable for or likely to adapt themselves to the Queensland climate and conditions have been experimented with during a series of years. To cope with the insect and fungus pests to which such fruits are peculiarly susceptible, careful inspection is made of fruits in the markets and for export, and every effort is put forth to prevent the introduction of fresh diseases and to exterminate those which are already within the State.

6. **South Australia.**—To this State belongs the honour of starting the first experimental farm in the Commonwealth. As far back as the year 1879 a resolution was passed by the local Parliament in favour of the establishment of a School of Agriculture, with an experimental farm, under the charge of a professor of agriculture. Active operations in this connection were commenced in 1882, when the first series of plots of wheat were sown at Roseworthy. Experimental work, chiefly directed towards improving

the wheat yield, has been developed along three main lines, viz.: (a) the improvement of varieties of wheat, (b) the improvement of methods of cultivation, and (c) the use of manures. The Central Agricultural Bureau, established at Adelaide under the control of an Advisory Board, has an extensive membership distributed throughout the agricultural districts of the State. It assists farmers by the dissemination of knowledge; by helping to introduce new economic plants; by improving the breed of stock; and it acts as a means of keeping the Agricultural Department in touch with the producers. The branches of the bureau hold meetings at regular intervals in their several districts, ideas and methods as regards practical subjects are interchanged, and discussions are held on matters of general interest to agriculturists.

7. **Western Australia.**—A considerable amount of developmental work has been done of late years towards the promulgation of agricultural knowledge on the State agricultural college at Narrogin, on the experimental farms at Brunswick, Merredin, Denmark and Chapman and on the State farms at Avondale and Yandanooka carried on as business undertakings.

8. **Tasmania.**—In Tasmania there is a Council of Agriculture consisting of eleven members, whose duties are to collect and publish information of every kind calculated to prove beneficial to agriculturists, such as suitableness of various districts for growth or production of animal and vegetable products, information respecting plants, methods of cultivation, breeding and feeding animals, and how best to improve the same; to prevent as far as possible the introduction and spread of diseases and pests, and to publish bulletins, abstracts, and reports containing all such information as may be desirable. Other matters embrace the employment of experts in any branch of agricultural science, distribution of plants and seeds for experiment, and the establishment of local boards of agriculture in different parts of the State. Lectures are given by the experts from time to time, and useful information and knowledge is diffused by means of the monthly gazette published by the Council, and also by means of special bulletins. There is an agricultural college and State farm consisting of 678 acres, which commenced operations during 1914, but the admission of students has been temporarily suspended during the war. Practically no agricultural teaching is given in the elementary schools.

## § 21. Government Loans to Farmers.

1. **Introduction.**—All the Australian States have established systems under which financial aid is rendered to agriculturists by the Government. The principle upon which such aid is founded was probably first practically applied in Germany, in the year 1770, when the *Landschaften Bank* was created. The establishment of the *Crédit Foncier* nearly a century later in France was a creation of a similar character. This latter institution was designed to enable house and land owners to raise money on mortgage at a low rate of interest, with facility for repayment by annual instalments including redemption of the capital. It dates from 1852, but the mortgage bank known as the *Caisse Hypothécaire*, which, after a struggling existence, was finally liquidated in 1864, was based essentially on the same principle. Over the operations of the *Crédit Foncier*, created under governmental patronage and invested with such special privileges as to virtually constitute it a monopoly, the Government exercised a direct control, by appointing its governor and its two deputy-governors. The *Crédit Foncier* was empowered to lend money only on a first mortgage, and to the amount of one-half of the estimated value of houses and farms, and one-third that of vineyards, woods, and other plantations, and the commission charged could not exceed six-tenths per cent. The system developed and adopted in the Commonwealth, with the object of assisting farmers to make improvements or to develop or utilise the agricultural or pastoral resources of the land, is analogous. Particulars of advances made under the Closer Settlement and similar Acts are dealt with in the section on Closer Settlement. (See pages 272 *et seq.*)

2. **Aggregate of Transactions in each State, 1913 to 1917.**—The subjoined table gives aggregates of transactions in reference to advances to farmers in each State during the past five years :—

(a) Compiled from figures furnished by the Government Savings Bank of Victoria. (b) Previous to 1914 for years ended 31st December prior. (c) For 18 months ended 30th June, 1914. (d) Includes loans to farmers and other producers and to local bodies on the security of their own rates. (e) Including profits in connection with House and similar loans. (f) Not shewn since amalgamation with Government Savings Bank. (g) See note(f).

3. **Legislation in each State.**—An account of the initial legislation in each State in reference to advances to settlers ; subsequent legislation ; security on which, and objects for which, advances were made ; amount of advances and repayments up to the end of 1911-12, etc., will be found in previous issues of the Year Book (see No. 6, pages 417-25).

4. **Particulars Respecting Agricultural and Stock Departments.**—In Year Book No. 7, 1901-1913, on pages 364 to 369, will be found particulars respecting agricultural and stock departments of the several States of the Commonwealth as on 30th June, 1913. The main features of organisation are set out under their respective headings, and will be found to embrace such items as the number on staffs, expenditure, facilities for agricultural education and work undertaken in agricultural colleges, technical schools, experimental farms and orchards and vineyards. The nature of lectures and other forms of agricultural instruction by experts is dealt with, as well as the extent of distribution of plants, and the special steps taken by the departments to disseminate information amongst agriculturists, and also to facilitate placing the products of the State on the market.

## § 22. Graphical Representation of Crops.

1. **Areas of Principal Crops.**—A graphical representation of the areas devoted to each of the principal crops in the Commonwealth for the period 1860-1916 will be found on page 387. The crops so represented are as follows :—Wheat, hay, oats, maize, sugar-cane, barley, and vines.

2. **Production.**—On page 388 will be found a graphical representation of the aggregate yields in the Commonwealth since 1860 of wheat, oats, barley, maize, and hay.

## SECTION IX.

## FARMYARD AND DAIRY PRODUCTION.

## § 1. Introductory.

1. **General.**—The introduction of cattle into Australia, and the early history of the dairying industry are referred to in some detail in previous issues of this work (see Official Year Book No. 6, pp. 430 *et seq.*). It may here be noted that the original stock has been crossed with specially imported stud cattle, while further judicious crossing of strains has resulted in an increased and improved milk supply. In Australia, dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter, and rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the adoption of scientific methods in the treatment of animals and pasturage and in the processes of manufacture, coupled with effective State supervision, the dairying industry has shewn rapid expansion.

2. **Official Supervision of Industry.**—Dairy experts, under the supervision of the various State Agricultural Departments, give instruction in approved methods of production, and inspect animals, buildings, and marketable produce. A high standard of cleanliness, both of *personnel* and *matériel*, prevails. Financial assistance of a temporary nature is also given, advances made being generally repaid with promptitude.

The export trade is regulated by the terms of the Commonwealth Commerce Act 1905 and regulations thereunder. The provisions of this Act are set out in detail in Official Year Book No. 6, pp. 431-2. It will be sufficient to note here that true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are certificated by the inspector.

3. **Mixed Farming.**—Dairying is not now, as formerly, wholly confined to farmers, since many graziers in a large way of business have lately given it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established.

4. **Factory System.**—Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories, supplied by numerous separating establishments or "creameries," has resulted in a considerable reduction in the cost of manufacture, since improved appliances, such as refrigerators, may be profitably worked at the larger establishments. The product is also of a more uniform quality. The number of farmers who adhere to hand processes is rapidly diminishing. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires less than 2½ gallons.

5. **Butter and Cheese Factories.**—The establishments in the Commonwealth where the manufacture of butter, cheese, and condensed milk was carried on, numbered 557 in 1916. These were distributed as regards the various States as follows:—New South Wales, 167; Victoria, 190; Queensland, 122; South Australia, 44; Western Australia, 3; Tasmania, 31.

## § 2. Milk, Butter, and Cheese.

1. **Dairy Herds.**—Following the drought year 1902 there was up to 1911 a general increase in the number of dairy cows; the returns for 1912 and the four years following, however, shew a decrease in all the States, with the exception of Western Australia. In New South Wales, Victoria, South Australia, and Tasmania—as will be seen from the table given below—the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory, and Western Australia there is a greatly preponderating number of other cattle, dairying not being firmly established in the tropical regions of the Continent. In southern Queensland, however, the industry has developed remarkably during the last decade. The figures for the Northern Territory are rough estimates only:—

### CATTLE AND DAIRY CATTLE, COMMONWEALTH, 1912 to 1916.

State.			1912.	1913.	1914.	1915.	1916.

	...	Dairy Cows	60,160	59,380	51,229	47,540	52,522
Northern Territory	...	All Cattle	405,552	417,643	414,558	483,961	420,362
	...	Dairy Cows	300	70	70	70	70
Federal Territory	...	All Cattle	7,108	7,627	4,961	5,666	8,230
	...	Dairy Cows	725	715	870	537	719
Commonwealth	...	All Cattle	11,577,259	11,483,882	11,051,573	9,931,416	10,459,237
	...	Dairy Cows	2,056,143	2,035,717	1,938,834	1,684,393	1,747,351

2. **Milk.**—The annual quantity of milk produced per dairy cow varies greatly with locality and season, probably reaching as high as 500 gallons, but averaging for the whole of Australia, for all dairy cows and for all seasons, prior to 1916, considerably under 300 gallons per annum. For 1916 the average yield in Victoria, South Australia and New South Wales was over that quantity, being 397; 363; and 304 gallons respectively, while the average for the Commonwealth as a whole for 1916 was 320 gallons. The best yields over a series of years appear to be in Victoria, New South Wales, and South Australia, while Queensland and Tasmania in normal years are above Western Australia. In the following table the annual average yields per cow for the last five years are taken from the number of dairy cows which were, during any part of the year, milking. The average given is considerably below that for cows which were yielding during the greater part of the year. It will be seen that the highest averages obtain in those States which have adopted more scientific methods of dairying, such as systematic breeding, culling of herds, milk testing, etc.

## PRODUCTION OF MILK, COMMONWEALTH, 1912 to 1916.

\* Mean for the year.

† Exclusive of Northern Territory.

3. **Butter and Cheese.**—The butter output shews, in general, a tolerably steady increase since the drought year 1902, the most marked development being in Queensland. The production of butter reached its highest figures in 1911, the next highest yields being in 1913 and 1914. The year 1916 marks the highest cheese production, the return being nearly 20 per cent. in advance of that of 1914, the next highest record, which was 7½ per cent. in advance of 1913, the previous highest record. In both butter and cheese a decrease took place in some of the States in 1907, 1908, 1914 and 1915, due to the dryness of the seasons. For the five years from 1912 to 1916 the figures are:—

## PRODUCTION OF BUTTER AND CHEESE, COMMONWEALTH, 1912 to 1916.

State.	1912.	1913.	1914.	1915.	1916.
<b>BUTTER.</b>

\* For year ended 30th June of year following.

4. **Concentrated Milk.**—"Condensed" or "concentrated" milk denotes milk the bulk of which is reduced by evaporation. Small quantities of such milk were made prior to 1911, in which year the output for the Commonwealth was nearly doubled. In 1912 there was a further large increase, which was well maintained during the two following years. During 1915 a considerable falling-off was in evidence in each of the three States; this, however, was more than compensated for during the following year, a substantial increase occurring in each State, the Victorian returns shewing an increase of nearly 100 per cent. on the 1915 output. There is still a considerable import of milk, as will be seen from the tables hereunder; but in each year, with the exception of 1915-16, the balance of trade was in favour of exports. No condensed or concentrated milk is made in South Australia, Western Australia, or Tasmania. In New South Wales, Victoria, and Queensland the following are the returns for the last five years:—

#### CONDENSED AND CONCENTRATED MILK, 1912 to 1916.

Year.	N.S.W.	Victoria.	Queensland.	Commonwealth..
	lbs.	lbs.	lbs.	lbs.
1912 ... ..	3,636,519	18,500,011	7,923,381	30,059,911
1913 ... ..	3,682,812	20,942,620	8,059,051	32,684,483
1914 ... ..	*5,991,458	19,093,750	6,967,486	32,052,694
1915 ... ..	*4,918,064	16,690,426	5,368,510	26,977,000
1916 ... ..	*5,829,990	*33,280,635	6,584,272	45,694,897

\* For year ended 30th June of year following.

5. **Oversea Trade in Milk, Butter, and Cheese.**—The following tables give the imports, exports, and net exports or imports of butter, cheese, and milk. In each of the five years, exports of butter exceeded imports, but in 1912 and 1915-16 the cheese import was greater than the export, while there was a net import of milk in 1915-16.

#### IMPORTS, EXPORTS, AND NET EXPORTS OF BUTTER, CHEESE, AND MILK, COMMONWEALTH, 1912 to 1916-17.

\* See definition above. † i.e., excess of exports over imports. The minus sign — signifies net imports.

6. **Local Consumption of Butter and Cheese.**—The total production of butter and cheese, with the net export or import for the corresponding period subtracted or added, gives approximately the quantity available for consumption in the Commonwealth. In the period considered hereunder, with the exception of the years 1912 and 1915, the local supply of cheese was adequate :—

**BUTTER AND CHEESE FOR LOCAL CONSUMPTION, 1912 to 1916.**

Product.			1912.	1913.	1914.	1915.	1916.
			lbs.	lbs.	lbs.	lbs.	lbs.
Butter	... Total	...	120,500,247	122,969,779	137,820,074	124,213,328	107,626,000
"	... Per head of mean population	...	25.9	25.6	28.0	25.1	21.93
Cheese	... Total	...	16,458,316	18,498,662	19,194,818	17,202,559	14,908,451
"	... Per head of mean population	...	3.5	4.8	3.9	3.5	3.04

The quantity available for consumption in 1916 averaged nearly 22 lbs. of butter and over 3 lbs. of cheese per head of mean population, an amount probably unsurpassed anywhere. The consumption of butter and cheese in the United Kingdom in normal times is given as about 20 lbs. per head per annum.

### § 3. Pigs, Bacon, etc.

1. **Pigs.**—Attention has been paid, both privately and by the various State Governments, to improving the breed, and consequently the market value of pigs. The number of pigs in the Commonwealth from 1912 to 1916 is shewn below :—

**NUMBER OF PIGS, COMMONWEALTH, 1912 to 1916.**

State.	1912.	1913.	1914.	1915.	1916.
New South Wales ...	293,450	287,896	*286,478	*280,869	*359,504
Victoria† ...	240,072	221,277	243,196	192,002	254,436
Queensland ...	143,695	140,045	166,638	117,787	129,733
South Australia ...	69,832	64,119	69,893	66,237	*118,542
Western Australia ...	47,351	47,966	59,816	58,231	90,756
Tasmania† ...	49,152	37,990	34,960	37,778	53,033
Northern Territory ...	1,500	1,018	1,240	500	500
Federal Territory ...	203	194	*226	*289	*259
Commonwealth ...	845,255	800,505	862,447	753,693	1,006,763

\* As on 30th June of year following.

† As on 1st March of year following.

The number of pigs in Australia was highest in 1911, and the next to that was in 1904, when for the first time it was over a million. An examination of the returns shews remarkable fluctuations. There was a general decrease in 1906 and the two following years, followed by an increase in 1909-10-11, a heavy decline in 1912 and 1913, an increase in 1914 and again a heavy falling-off during 1915, followed by a very substantial rise in all the States in 1916. The number of pigs per head of population, and the number per square mile, will be found in the tables of live stock, pages 306 and 307.

2. **Bacon and Ham.**—From 1905 to 1908 the production of bacon and ham in the Commonwealth shewed little annual variation. In 1909, however, there was a considerable falling-off, but a large increase took place in subsequent years up to 1912. During

the succeeding three years the production again fell away, more especially in 1915, but a satisfactory increase was recorded in 1916 in all the States with the exception of Queensland.

Net Exports ...	No. 595	420	116	52	13
" ...	£ 827	1,282	— 24	519	123

Note. — signifies net imports.

## IMPORTS, EXPORTS, AND NET EXPORTS OF BACON AND HAM, FROZEN PORK, PIGS, AND LARD, COMMONWEALTH, 1912 to 1916-17—Continued.

Particulars.	1912.	1913.	1914-15.	1915-16	1916-17.
LARD.					
Imports ... .. lbs.	794,961	884,312	268,043	3,873,248	408,552
" ... .. £	22,096	23,900	7,433	108,985	12,225
Exports ... .. lbs.	2,092,422	4,299,987	1,491,119	342,593	1,796,821
" ... .. £	37,063	85,194	31,542	13,736	59,205
Net Exports ... .. lbs.	1,297,461	3,415,175	1,223,106	-3,530,655	1,588,269
" ... .. £	14,967	61,294	24,109	-95,249	46,980

Note. — signifies net imports.

From 1901 to 1903 there was a considerable net import of bacon and ham, but for the following years, up to 1916-17, with the exception of 1915-16 when the figure was small, there was a large net export. The local production of pork and lard for each of the years 1911 to 1913 was more than sufficient for the local demand; during 1914-15, 1915-16, and 1916-17, however, the imports of frozen pork exceeded the exports by 25,546 lbs., 859,985 lbs. and 40,613 lbs. respectively. The net export of pig products was considerably greater in 1910 and 1911 than in previous years, but there was a decline in 1912, and a further falling-off in the three subsequent years, followed by an increase during 1916-17.

4. Local Consumption of Bacon and Ham.—From 1904 to 1916 the production of bacon and ham was sufficient to meet the local demand, and there was a surplus for export.

## BACON AND HAM AVAILABLE FOR LOCAL CONSUMPTION, 1912 to 1916.

Consumption.	1912.	1913.	1914.	1915.	1916.

\* For year ended 30th June, 1917. † A portion only from pigs slaughtered in the State, the balance being imported and subsequently cured.

## § 4. Poultry Farming.

1. **Development of the Industry.**—Poultry stocks are largely maintained by farmers, and production therefrom furnishes a considerable addition to the annual agricultural or dairying returns. During recent years, however, poultry-keeping has assumed an independent position among rural industries, while it is also carried on in conjunction with pig farming. Special poultry farms have been instituted for scientific breeding, and poultry experts engaged by the State Governments give lectures and instruction. Poultry for consumption is extensively reared, and the egg-producing qualities of the birds have also been greatly improved by careful breeding. Co-operative egg-collecting circles have been formed in some districts; eggs are also delivered with the milk and cream to the local butter factories, and thence forwarded to market.

2. **Production of Poultry.**—There is some difficulty in obtaining correct figures for the yield of poultry products. The following values are returned:—

## ESTIMATED VALUE OF POULTRY AND EGGS, COMMONWEALTH, 1912-13 to 1916-17.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas. *	Fed. Ter.	C'wealth.
	£	£	£	£	£	£	£	£
1912-13 ...	1,432,120	1,825,010	188,000	541,489	183,689	230,000	1,880	4,402,188
1913-14 ...	1,578,000	1,706,700	219,400	569,254	223,713	230,000	1,600	4,528,667
1914-15 ...	1,597,000	1,743,860	234,994	524,347	204,591	230,000	1,180	4,535,972
1915-16 ...	2,144,000	1,747,000	107,370	518,808	184,360	200,000	2,000	4,903,538
1916-17 ...	1,905,500	1,714,770	324,958	618,441	201,284	250,000	2,500	5,017,453

\* Estimated.

3. **Overseas Trade in Poultry Products.**—The imports and exports of eggs shew a considerable balance on the side of imports in each of the years 1901 to 1906 and during the last eight years. In 1907 the export greatly exceeded the import, and in 1908 the

imports were greater in quantity, but less in value, than the exports. During 1915-16, 303,300 dozen eggs were imported from Hong Kong, 240,167 dozen from China, and 99,372 dozen from Japan. Of the 35,762 dozen imported during 1916-17, 31,388 came from Hong Kong, and 2521 dozen from Straits Settlements. There is at present only a small oversea trade in either live or frozen poultry, the values of the net exports during 1916-17 being £2396 and £3767 respectively.

**IMPORTS, EXPORTS, AND NET EXPORTS OF EGGS AND OF LIVE AND FROZEN POULTRY, COMMONWEALTH, 1912 to 1916-17.**

## § 5. Bee Farming.

1. **The Bee-farming Industry.**—Bee farming, like poultry farming, is ordinarily an adjunct to agricultural or dairying industries. The returns of honey from productive hives during 1916-17 gave an average of just under 50 lbs. per hive, while the average quantity of wax was about three-quarters of a pound per hive.

The value of the export of honey from Australia was only £1924 in 1912, £4094 in 1913, £2589 in 1914-15, and £1045 in 1915-16, but in 1916-17 the value aggregated £9526. It is believed that this export could be considerably increased. Australian honey exhibited at the Franco-British Exhibition in London in 1908 obtained the highest award.

2. **Production of Honey and Beeswax.**—The particulars of honey and beeswax production are as given in the following table :—

**NUMBER OF HIVES AND PRODUCTION OF HONEY AND BEESWAX, SEASON 1916-17.**

State.	Bee Hives.			Honey Produced.		Beeswax Produced.

1916-17	29,387	22,131	7,042	9,793	3,985	2,059	47	74,444

\* Not available. † Exclusive of Tasmania.

The quantity of honey and beeswax produced from year to year naturally varies considerably according to the conditions of the seasons. During the past five years, New South Wales has been the largest producer, accounting for 33 per cent. of the total honey produced in the Commonwealth, and 37½ per cent. of the beeswax; Victoria, the next in importance, produced about 32½ per cent. of the honey, and 31 per cent. of the beeswax; South Australia, Queensland, and Western Australia coming next in the order named.

3. **Oversea Trade in Bee Products.**—In normal years honey is produced in the Commonwealth in sufficient quantities to supply all local requirements, and a considerable quantity is sent oversea. The more general use of frame hives in recent years has affected the production of wax, and as a result the quantity imported has exceeded that exported during each of the past three years.

### § 8. British Imports of Dairy Products.

1. Value of Britain's Imports of Dairy Products.—From 1912 to 1914 Great Britain paid £24,000,000 annually for imported butter, the value of the imports in 1912, 1913, and 1914 being £24,354,000, £24,034,000, and £24,014,000 respectively, while for 1915 the value was £27,023,000, and for 1916 £18,964,000. For imported cheese the amounts in the years named were respectively £7,414,000, £7,035,000, £7,966,000, £11,107,000 and £12,946,000; for bacon and ham, £17,276,000, £20,497,000, £21,289,000, £30,722,000, and £41,223,000 respectively; and for pork, £1,101,000, £1,665,000, £2,663,000, £1,010,000 and £1,303,000 respectively.

2. **Butter.**—Australia in 1911 stood second, in 1912, 1913, 1914 and 1916 third, and in 1915 fourth, in regard to value of butter imported into the United Kingdom; but the import of other Australian dairy products was inconsiderable.

#### IMPORTS OF BUTTER INTO THE UNITED KINGDOM, 1916.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	Cwt.	£		Cwt.	£
Denmark ...	1,134,801	10,378,050	Iceland and Greenland ...	1,443	12,568

Norway ...	7,032	58,073	Total ...	2,175,415	18,964,002

In January, 1910, the average price of Australian butter in London was 111s. After a fall in 1911, 134s. was reached in the middle of January, 1912. This high average was followed by a rapid decline. Higher prices were again in evidence as 1913 advanced, 128s. being obtained for best unsalted butter in October and November of that year; from that time till the middle of 1914 prices gradually fell to 108s., when an upward movement commenced, which continued through the latter half of 1914 and, with slight variation, throughout 1915; in December of that year 168s. was obtained for best unsalted. A slight fall in January, 1916, was followed by a gradual rise throughout the year, 210s. being obtained for best unsalted in December. Quotations for London prices are only available to end of August, 1917, on which date best Australian butter was listed at 212s. per cwt. At the commencement of March in the same year the price was 220s., this being the highest recorded price for Australian butter. Prices in London during the last nine years have been considerably higher than the average of any previous year since the Australian export trade was instituted over twenty years ago. A marked approach to Danish values has lately been made in the prices of Australian butter, Danish choice at the close of 1916 being 224s., or only three halfpence per pound over Australian.

3. **Cheese.**—The value of the British cheese imports in 1916 was £12,946,000, of which nearly seven and a-half million pounds' worth was received from Canada. Small experimental shipments from Australia were made in 1908 and following years, fair prices being realised. In 1915, the value of the imports from Australia was £91,700.

4. **Bacon and Ham.**—Of a total import of bacon and ham valued in 1916 at £41,223,000, Great Britain received imports to the value of £9,088,000 from Denmark; £23,421,000 from the United States; and £7,708,000 from Canada. The British import from Australia was small, experimental shipments only having been made during recent years.

5. **Pork.**—The total value of British imports of pork (including refrigerated, frozen and salted) was £1,303,000 in 1916. There was no import from Australia, the chief supplying countries being the United States, £1,129,000; and China, £47,000.

6. **Other Products.**—There is practically no British import from Australia of honey, beeswax, poultry, game, lard, or eggs, but frozen rabbits to the value of £1,086,000 were received from the Commonwealth in 1916.

### § 9. Graphical Representation of Dairy Production.

Two graphs shewing respectively the increase in dairy production and in the exports of butter will be found on page 322.

## SECTION X.

## FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

## § 1. The Forests of Australia.

1. **Extent of Forests.**—Although no definite survey of forest lands has been made on a uniform basis for the different States of Australia, the following table gives the results of careful estimates made for each State :—

## FOREST RESERVES AND FOREST AREAS, STATE AND COMMONWEALTH, 1916.

State.	Area of Forest Reserves.		Total Forest Area.	Percentage of State Area.		Percentage of Commonwealth Area.	
	Perman-ent. (a)	Tempor-ary. (b)		Specially Reserved.	Total Forest.	Specially Reserved.	Total Forest.
	Acres.	Acres.	Acres.	%	%	%	%
New South Wales*	3,117,579		15,000,000	1.57	7.57	0.16	0.79
Victoria ...	4,128,306	125,500	11,800,000	7.56	20.98	0.22	0.62
Queensland ...	1,080,590	2,887,646	40,000,000	0.92	9.32	0.21	2.10
South Australia ...	128,294	20,235	3,800,000	0.03	1.56	0.01	0.20
Western Australia	9,908	1,611,698	20,400,000†	0.26	3.27	0.09	1.07
Tasmania ...	...	1,028,000	11,000,000	6.13	65.56	0.05	0.58
Commonwealth‡	14,137,746		102,000,000	—	—	0.74	5.36

(a) Reservations in perpetuity. (b) Reservations which may be cancelled at any time.

\* Inclusive of Federal area. † S.W. division only. ‡ Exclusive of Northern Territory.

In the case of Victoria the figures for area of permanent reserves include 3,381,905 acres reducible only by Act of Parliament, and 746,401 acres by resolution of both Houses of Parliament.

The actual area of wooded land is probably in all cases much greater than shewn above. For example, that of Western Australia is estimated at 97,900,000 acres; Queensland has probably 148,000,000 acres; and Victoria has a considerable extent of "Mallee" country not included in the above estimate. The basis of estimation for each State in any case cannot be regarded as quite identical. Considerable areas not included as forest lands possess timber of local value.

The absolute and relative forest areas of Australia and other countries, to the latest available date, are shewn in the table on the next page.

## RELATIVE AREAS OF FOREST LANDS, AUSTRALIA AND OTHER COUNTRIES.

Country.	Total Wooded Area.	Percentage of Total Area.	Country.	Total Wooded Area.	Percentage of Total Area.

Austria ...	37,700	31.66	Japan ...	71,890	48.33
Hungary ...	34,750	29.30			

2. **Distribution of Timber.**—The characteristics of the forest areas are given in some detail for each State in the Official Year Book No. 6, pp. 446-9. The more conspicuous timber regions of Australia as a whole are the eastern and southern portions, including Tasmania, and, again, the south-western portion northwards and eastwards from Cape Leeuwin. In regard to distribution, on the eastern side of the continent the largest timber is found on the crests and coastal slopes of the mountain ranges, but in the south-west, in addition to the vegetation between mountains and sea, a large area of forest stretches inland from the coastal ranges. The hills encircling Adelaide and Yorke and Eyre Peninsulas also bear good forest. The Kimberley district is timbered, and in the Northern Territory and round the shores of the Gulf of Carpentaria there are considerable forest areas. In the coastal regions of parts of West and North-West Australia, and along the shores of the Great Australian Bight and Encounter Bay, there is little forest. The areas in the centre of the continent are thinly timbered.

Special articles relating to Australian Eucalyptus timbers will be found in Official Year Book No. 10, pp. 85-98.

## § 2. Forestry.

1. **Objects.**—Economic forestry, aiming at the conservation of forestal wealth by safeguarding forests against inconsiderate destruction, and by the suitable re-afforestation of denuded areas, is essential to the preservation of industries dependent upon an adequate supply of timber, and to the perpetuation of a necessary form of national wealth. Though in Australia large areas of virgin forests still remain, the inroads made by timber-getters, by agriculturists, and by pastoralists—who have destroyed large areas by “ring-barking”—are considerable; and it is not unlikely that climatological changes are caused thereby. It is stated that beneficial consequences follow on the planting of trees on denuded lands, or along eroding coasts, and that a forest covering beneficially regulates the effects of rainfall.

Successful planting of exotics in various parts of the Commonwealth has demonstrated that the Australian climate is suitable for the cultivation of a large number of the most valuable and beautiful of the world's timber trees.

2. **Forestry Departments.**—Each State of the Commonwealth has organised a separate forestry department or branch of service specially charged with forestal matters. Forest improvement work is carried on, areas of young forest being cleaned up by the felling and removal of stunted, diseased and suppressed growth, the burning of debris and the making of fire breaks. Provision is made for effective patrols in forest districts to check the ravages caused by fires, often caused, it is believed, through carelessness.

3. **Sylvicultural Nurseries and Plantations.**—Recognition of the necessity for systematic sylviculture has led to the creation in most of the States of a number of

silvicultural nurseries and plantations. The locality of these establishments, together with a brief statement of the nature of their activities, is given in previous issues of the Year Book. (Reference may be made to Official Year Book No. 6, pp. 451-3.) Details regarding forest reserves, nurseries, and plantations are as follows:—

#### FOREST RESERVES AND NURSERIES, 1916.

Particulars.	New South Wales.*	Victoria.	Q'land.	South Australia.	Western Australia.	Tasmania.	Commonwealth

Commonwealth ...	138,537	145,276	157,569	157,534	169,889

5. **Instruction in Scientific Forestry.**—Several schools have been established in which, while general scientific instruction is imparted, special attention is paid to forestry. In the classes, theoretical forestry, botany, geology, physics, land surveying, etc., are taught; while in outside work trainees receive practical instruction in the preparation of seed-beds, seed-sowing, propagation, planting out, pruning, the general care and improvement of plantations and natural forests, and the employment of timber to the best advantage. The desire is to give the prospective forester a thorough training in all branches of the work. Courses of lectures are also given at various centres, and, at some of the higher technical schools, members of the forest staffs are afforded opportunities of qualifying in special subjects. Methods of training, etc., are not uniform in the various States, and one of the prime objects of the Conference of 1916 was the evolution of a system which, while aiming at uniformity, would be sufficiently elastic to provide for special needs in any State.

6. **Forest Congresses.**—Interstate Conferences on Forestry were held in 1911 and 1912, chiefly with a view of securing uniformity of management. An International Forest Congress was held at Paris in June, 1913, when Professor Percy Groom, of South Kensington Imperial College, represented the Commonwealth Government. The papers and reports dealt chiefly with the threatened shortage of timber, and the measures necessary to avert the danger. In May, 1916, an Interstate Forestry Conference was held at Adelaide.

### § 3. Commercial Uses of Principal Australian Timbers.

1. **General.**—The uses of the more important of Australian timbers are many and various, and are indicated in previous issues of this work. (See Official Year Book No. 6, pp. 454-6; and Official Year Book No. 10, Section III., § 7 and 8).

The Commonwealth Government is experimenting with Australian woods for rifle stocks, telephone switch boards, aeroplane parts, etc. Queensland maple (*Flindersia chatawaiana*) is at present largely used for rifle stocks, and supplies of coachwood are being accumulated at Lithgow for the same purpose. Money has also been made available for the seasoning and storing of Australian timber, and depôts have been established at Canberra and Newington in New South Wales, and at Maribyrnong in Victoria. Timber seasoning depôts have also been established by States Governments at the principal centres, and from these, contractors may obtain timber at scheduled rates. Other timber seasoning works have been established by private enterprise.

2. **Uniformity in Nomenclature.**—Unfortunately the vernacular names applied to the gums, ironbarks, etc., in the various States, and even in different parts of the same State, do not always refer to identical timbers. The resulting confusion has not only been productive of loss, but it has, to some extent, prejudicially affected the timber trade. This subject is referred to at some length in the special article, "Australian Eucalyptus Timbers," in Section III., § 7 and 8, in Official Year Book No. 10. At the 1916 Forestry Conference alluded to above, the matter came up for special consideration, and a resolution was passed affirming the desirability of establishing a uniform nomenclature. It was further resolved that committees should be appointed in each State to take the necessary steps to give practical effect to that resolution.

### § 4. Forestal Industries and Production.

1. **Timber.**—Estimates of the quantity and value of local timber sawn and hewn in each State are given hereunder:—

**QUANTITIES OF LOCAL TIMBER SAWN OR HEWN IN EACH STATE OF THE  
COMMONWEALTH DURING THE YEARS 1912 to 1916.**

State.	1912.	1913.	1914.	1915.	1916.
	sup. feet.	sup. feet.	sup. feet.	sup. feet.	sup. feet.
New South Wales ... ..	162,604,000	164,899,000	140,940,000	115,201,000	125,243,000
Victoria ... ..	60,000,000	81,770,000	84,374,000	62,589,000	70,039,000
Queensland ... ..	163,828,000	156,634,000	168,456,000	144,950,000	121,851,000
South Australia ... ..	1,775,080	1,899,000	2,306,000	2,026,000	2,824,000
Western Australia ... ..	217,696,000	218,908,000	327,297,000	123,494,000	100,356,000
Tasmania... ..	63,243,000	60,780,000	52,182,000	47,890,000	52,019,000
Commonwealth ... ..	669,146,000	684,890,000	675,555,000	496,150,000	472,332,000

2. **Other Forest Produce.**—(i.) *General.* No satisfactory estimates of the total value of forest production are available. Large returns are credited to firewood, but these are subject to a wide range of uncertainty.

(ii.) *Eucalyptus Oil.* A considerable quantity of eucalyptus oil is produced each year, chiefly in Victoria, the product being used as a drug and also in connection with ore flotation processes. Complete information regarding local production and consumption is not available. Oversea exports amounted in 1913 to £40,000, in 1914-15 to £21,000, in 1915-16 to £36,000, and in 1916-17 to £60,000, the bulk of the product being forwarded to the United Kingdom. Large quantities have also been exported to the United States.

(iii.) *Tan Barks.* In addition to the wattle bark, mentioned at the close of this section, a valuable tan bark is obtained from the mallet (*E. occidentalis*) of Western Australia. Its exploitation has, however, been so rapid that the available supply is now comparatively small.

## § 5. Oversea Trade.

1. **Imports.**—The quantity and value of timber imports during the four years 1913 to 1916-17 inclusive are shewn according to countries of origin in the following tables. The figures in the first table are exclusive of a few items such as veneers, etc.:—

**IMPORTS OF DRESSED TIMBER, COMMONWEALTH, 1913 to 1916-17.**

Country of Origin.	Quantity.				Value.

As the table shews, the bulk of the imports of dressed timbers comes from Norway, Sweden (except in 1916-17) and the United States. Practically the whole of this timber consists of softwoods—deal and pine—used for lining, weatherboards, flooring, shelving, doors, box-making, etc.

By far the larger proportion of the undressed timber imports also consists of soft-woods such as yellow pine, redwood, and oregon from the United States and Canada; kauri, rimu, and white pine from New Zealand; pine from Japan, and (prior to the war) red deals from Russia, Norway and Sweden. Amongst the hardwoods imported the principal are oak from the United States and Japan, and teak from India.

2. Exports.—The quantity and value of undressed (sawn) timber exported from 1912 to 1916-17 are given below, the countries of destination being also shewn :—

\* Exclusive of timber not measured in super. feet. † Previously included with foreign countries.

As the table shews, the bulk of the exports of undressed timber was consigned to South Africa, New Zealand, and the United Kingdom; and consisted of Australian hardwoods, which have earned an excellent reputation for such purposes as railway sleepers, harbour works, wood paving, etc.

The quantities of timber imported and exported during the last five years are given in the next table:—

Note. — signifies excess of exports over imports.

A fair amount of sandalwood is exported each year, principally from Western Australia, and to a much smaller extent from Queensland. The largest proportion of this product is consigned to Hong Kong and China, while small quantities are taken chiefly by the Straits Settlements and India.

Prior to the war there was a fairly considerable export of tan bark to Germany and also to Belgium. The exports westward have naturally dwindled away, and at the present time New Zealand receives the largest share of the available export, while there is an increasing trade with Japan and Java. During recent years the largest proportion of the exports consisted of wattle bark from Tasmania and Victoria.

A comparison of the imports and exports of tanning bark during the last five years is given in the next table:—

## TANNING BARK IMPORTED INTO AND EXPORTED FROM THE COMMONWEALTH, 1912 to 1916-17.

Particulars.	1912.	1913.	1914-15.	1915-16.	1916-17.

Exports ... ..	72,128	60,411	32,025	41,733	28,914
Excess of exports over imports	21,208	32,424	7,101	-5,965	-22,547

Note.—The minus sign — denotes excess of imports.

The imports consist almost exclusively of wattle bark from the plantations in South Africa. One variety of Australian wattle was found to flourish in the sandy belts near the Coast, but it is the *Acacia decurrens*, var. *mollis*, which is chiefly relied upon for the production of wattle bark in the South African plantations. Seed has been tried from New South Wales, Tasmania, and Victoria, but it is stated that most of the seed is obtained from the best wattle bark areas in eastern Tasmania and western Victoria.

Two reasons have been given to account for the success of the industry in South Africa. (1.) It was found that the treeless, grassy highlands of Natal, were specially suitable for wattle culture, and the trees could therefore be grown in rows and economically attended to, while the necessary bark sheds and other appurtenances could be placed in the most advantageous positions. (2.) There was an abundance of cheap and efficient Hindoo labour available for employment on the plantations.

## SECTION XI.

## FISHERIES AND PISCICULTURE.

## § 1. Commercial Fisheries.

1. **Fish Stocks.**—Australasia possesses an abundant and varied fish fauna, which embraces both tropical and temperate varieties and includes destructive as well as valuable species. In rivers and lakes both indigenous and imported varieties thrive. The latter have been introduced and acclimatised for industrial and sporting purposes by Governments and angling societies. Exploitation of the fishing areas—for some classes of fish for the whole year, for others during the breeding season only, or until a certain size is attained—is, where necessary, expressly forbidden; proclaimed localities are closed against net-fishing, and a minimum size of mesh for nets is fixed. The sea-fishermen in some districts have made regulations in their own interests for the purpose of controlling the market supply, and these they rigorously observe.

2. **Economic Fisheries.**—Although Australia's food fishes are abundant, the development of the industry has been slow. It has been authoritatively stated that the marine fisheries, properly fostered, will develop into an industry of national importance. Local catches of lake and river fishes furnish, in the aggregate, a not inconsiderable amount of food supply. (See also § 5 and 6 hereinafter.)

3. **Distribution of Supplies.**—Present methods of distribution impose serious difficulties on the development of fishing generally, since there is a wide divergence between the price paid by the consumer and the return received by the producer. States and municipalities are interesting themselves in the direction of more economic distribution. Good markets are assured in the chief cities for regular deliveries of fresh fish. (See also § 5 and 6 hereinafter).

4. **Oyster Fisheries.**—Natural oyster beds, whose ample product is of excellent quality, exist on the foreshores in the shallow waters of inlets and estuaries in several parts of Australia. By husbanding the natural crop, and by judicious transplanting, the oyster output has been very materially augmented, and it is believed that there is a great future for the industry. The areas are leased by the Government to private persons, lengths of foreshore being taken up and profitably exploited. In New South Wales and Queensland particularly, the industry has developed; and small yields have been obtained in South Australia and Victoria.

5. **Pearl-shelling, Beche-de-Mer, etc.**—(i.) *General.* Pearl-shelling is carried on in the tropical districts of Queensland, the Northern Territory, and Western Australia. The pearl oyster inhabits the northern and western coastal waters from Cape York to Shark Bay, a length of shore of over 2000 miles. The shells are marketed in considerable quantities, and pearls also are obtained in Queensland and Western Australia. The fishing is generally conducted with the aid of diving apparatus, in water varying from

four to twenty fathoms in depth. In Queensland and the Northern Territory the bêche-de-mer industry is carried on, and tortoiseshell is obtained on the coasts. Experiments have been made in cultivating the pearl oyster on suitable banks. In October 1911, a pearl weighing 178 grains, and valued at £3000, was obtained at Broome. Further details regarding pearl-shelling are given in Official Year Book No. 6, p. 463. Trochus shell to the value of £12,000 and £23,000 was raised in Queensland during 1915 and 1916 respectively.

(ii.) *Royal Commission on Pearl-shelling Industry.* In accordance with the "White Australia" policy, it was originally determined that the employment of Asiatic labour in the pearl-shelling industry should be restricted, and ultimately cease, and it was proposed that after 31st December, 1913, permits to indent Asiatics for the pearling fleet should no longer be issued. In view, however, of the disorganisation of the industry occasioned by the war, the time was extended to the 30th June, 1918, after which date permits to introduce Asiatic labour were to be granted only in cases where the diver and tender of a boat were Europeans. Since the receipt of the Report of the Royal Commission, referred to hereunder, this proviso was, however, revoked. In March, 1912, a Royal Commission to inquire into the pearling industry was appointed by the Commonwealth Government, and after visits to the Queensland and Western Australian waters, various sittings, and the issue of a progress report, presented its final report in 1916. The Commissioners stated that, while it may be practicable, they did not consider it desirable or profitable to attempt by any drastic methods to transfer the industry from Asiatics to Europeans. They further stated that, while the labour now employed is almost entirely Asiatic, they did not consider that the "White Australia" policy would be weakened or imperilled by allowing the industry to continue as at present conducted.

## § 2. Fisheries Statistics.

1. *Estimates for the Commonwealth.*—The returns given below have been furnished by the State departments. Estimates and approximations, where shewn, are official. The data do not generally lend themselves to presentation on a uniform scheme, but the principal facts have as far as possible been compiled for the Commonwealth. The figures for New South Wales are exclusive of the State Trawling operations.

### GENERAL FISHERIES (EXCLUDING EDIBLE OYSTERS, PEARLSHELL, AND BÊCHE-DE-MER), COMMONWEALTH, 1916.

State.	No. of Boats Engaged.	Value of Boats and Equip- ment.	No. of Men Em- ployed.	Total Take of		Value of Take.

Commonwealth ...	547	26,880	618	3,634	85,740	94,884

The pearling industry is carried on in the tropical waters of Queensland, Western Australia, and the Northern Territory. During the last few years the return from the pearling industry has been adversely affected by labour conditions, coupled with the restriction in the market consequent on the war. Some of the pearling fleets have transferred their operations to Dutch waters. Bêche-de-mer is obtained in Queensland and the Northern Territory, the product being exported to China.

## PEARL, PEARLSHELL, AND BÊCHE-DE-MER FISHERIES, COMMONWEALTH, 1916.

State.	Number of Boats Engaged.	Value of Boats and Equip-ment.	Number of Men Em-ployed.	Quantity of Pearls- hell obtained.	Value of Pearls- hell obtained.	Value of Pearls ob- tained.	Value of Bêche-de- mer obtained.	Value of Tor- toiseshell ob- tained.

\* Exclusive of pearls obtained by Japanese divers, of which no record is obtained.

† For year 1915. ‡ Not available.

Information in regard to the value of pearls obtained was furnished by Western Australia only, the figures for 1916 being £27,190, as compared with £14,894 in the preceding year and £90,000 in 1914. Pearls obtained in Queensland waters were valued at £6,120 in 1914. For obvious reasons the returns can be regarded as rough approximations only. The next table gives the revenue from fisheries in each State.

## PUBLIC REVENUE FROM FISHERIES, COMMONWEALTH, 1916.

\* There are practically no oyster fisheries in Victoria, Western Australia, and Tasmania.

† Exclusive of Tasmania.

The following table gives in summarised form for the years 1912-16 the details available in regard to pearling and bêche-de-mer fishery for the States where these industries are carried on, i.e., Queensland, Western Australia, and the Northern Territory. The low production in 1915 was, of course, due to the loss of market occasioned by the war. For obvious reasons, figures regarding value of pearls obtained can be taken as rough approximations only.

**PEARL, PEARLSHELL, AND BÊCHE-DE-MER FISHERIES, COMMONWEALTH,  
1912 to 1916.**

Particulars.	1912.	1913.	1914.	1915.	1916.

\* As returned.

† Incomplete; and exclusive of pearls obtained by Japanese divers.

In addition to the production mentioned above, Queensland during 1916 raised 951 tons of trochus shell, valued at £22,941. The shell is used principally in the manufacture of "pearl" buttons.

### § 3. Oversea Trade in Fish.

That the development of the fishing industry in Australia leaves much to be desired is evident from the fact that the import of preserved fish into the Commonwealth is very large. The figures for the imports for the last five years were as follows:—

#### IMPORTS OF FISH, COMMONWEALTH, 1912 to 1916-17.

Classification.	1912.	1913.	1914-15.	1915-16.	1916-17.
Fresh (oysters) ...	cwt. 8,765 £ 5,279	8,912 5,281	6,353 4,187	4,736 3,040	3,059 2,157
Fresh, or preserved by cold process... ..	cwt. 25,673 £ 56,396	34,172 78,510	27,015 65,741	25,771 68,676	18,363 48,191

Preserved in tins ...	cwt. 194,092 £ 606,969	171,733 525,996	194,005 660,693	213,347 755,286	174,145 715,741
Smoked, dried and n.e.i.	cwt. 26,472 £ 76,327	24,629 70,605	15,477 37,141	10,403 32,868	10,015 37,239
Total ...	{ cwt.† 255,002 £ 780,477	239,446 718,036	242,850 806,314	254,257 914,284	205,582 847,596

\* Not available. † Exclusive of potted fish.

Tinned fish constitutes by far the largest proportion of the imports, the bulk of it consisting of salmon from the United States, Canada, Norway, and Alaska. The potted fish comes chiefly from the United Kingdom. New Zealand supplies the largest proportion of the fresh fish, the bulk of the remainder coming from the United Kingdom. The small import of oysters consists entirely of New Zealand produce.

The exports of local fish produce for the five years 1912 to 1916-17 is given hereunder :—

**EXPORTS OF FISH (AUSTRALIAN PRODUCE), 1912 to 1916-17.**  
**COMMONWEALTH.**

Classification.		1912.	1913.	1914-15.	1915-16.	1916-17.
Fish, fresh, smoked, or preserved by cold process	{ cwt.	137	114	1,919	918	764
	{ £	436	367	9,532	2,806	3,089
Preserved in tins, dried, salted, etc.	{ cwt.	38,268	11,334	10,655	11,044	12,222
	{ £	35,827	40,573	29,337	40,441	39,839
Total	{ cwt.	38,405	11,448	12,574	11,962	12,986
	{ £	36,263	40,940	38,869	43,247	42,928

The quantity of fresh fish exported from the Commonwealth is trifling, and the amount of £3089 shewn in the table above consists chiefly of cured bêche-de-mer exported to Hong Kong from Queensland and the Northern Territory. The bulk of the amount of £39,839 consists of an export of salt fish also to Hong Kong from Queensland.

The exports of pearlshell and tortoiseshell are given hereunder for the five years 1912 to 1916-17 :—

**EXPORTS OF PEARLSHELL AND TORTOISESHELL, 1912 to 1916-17.**  
**COMMONWEALTH.**

Article.		1912.	1913.	1914-15.	1915-16.	1916-17.
Pearlshell	{ cwt.	64,976	41,813	26,276	50,124	69,515
	{ £	524,281	383,193	179,430	194,052	363,669
Tortoiseshell	{ lbs.	5,170	3,244	1,244	570	1,283
	{ £	3,454	2,081	822	333	802

Nearly 70 per cent. of the pearlshell exported during 1916-17 was consigned to the United States, which took nearly £246,000 worth of the total export. The next largest share went to the United Kingdom, which took £63,000 worth, while shell to the value of £46,000 was exported to Japan.

## § 4. Development of the Fishing Industry.

1. **Transport and Marketing.**—Up to the present the question of adequate transport and marketing of the proved supplies of fish has not been satisfactorily dealt with in all the States. In New South Wales, as shewn in § 6 hereinafter, the matter of exploiting and marketing trawlable fish has been undertaken by the State Government, which has also taken steps to improve the conditions under which the ordinary coastal fishing is carried on.

2. **Experiment and Culture.**—In many respects the fishing industry is capable of modification and development. Although some valuable work has been done by the State Governments in the way of experiment and culture, a uniform policy of development for Australia is desirable, and recommendations have been made that the Fisheries Departments of the various States should co-operate with the Federal Government with a view to increasing the productiveness of the Commonwealth waters; and that uniform fisheries laws should be adopted by adjacent States.

All live fish imported into Australia are examined on shipboard in order to prevent the importation of undesirable fish.

With the object of ascertaining something of the movements of oceanic fishes, as well as of those estuarine fishes which make periodical oceanic migrations, reports are furnished regarding the various kinds of fishes, etc., and their movements along the coast.

Fuller details regarding the activities of the States in fish-culture are given in Official Year Book No. 6, pp. 471-2.

By arrangement with the Commonwealth Fisheries Department, members of the staff of the Australian Museum, Sydney, accompanied the F.I.S. "*Endeavour*" on various cruises. Specimens were collected, mounted for scientific purposes, and distributed to other Australian Museums, a considerable number being put aside for the Commonwealth Fishery Museum.

**3. Consumption of Fish.**—Despite the circumstance that numerous varieties of valuable food fishes abound in the coastal waters of Australia, while the freshwater rivers and lakes yield abundant supplies of natural and acclimatised species, the fishing industry has not developed to the extent that might reasonably be expected. It has been said that the Australians are not an "ichthyophagous race," but the comparatively heavy import of dried and preserved fish would appear to disprove this statement. The natural explanation seems to be that the industry is ill-managed, the price to the consumer is high, while the fisherman's gain is uncertain—and the system of distribution lacks method. Considerable improvement has, however, been effected in recent years, particularly in New South Wales (vide § 6 herein).

## § 5. The Commonwealth Department of Fisheries.

**1. The Federal Council of Australasia.**—The Federal Council had power to legislate with regard to fisheries in Australasian waters beyond territorial limits. In its second session (opened 16th January, 1888) an Act was passed to regulate pearlshell and bêche-de-mer fisheries in Australasian waters adjacent to Queensland; and in the third session, opened shortly afterwards, the Act was made applicable to Western Australia. Upon the passing of the Commonwealth Constitution Act of 1900, however, the Federal Council ceased to exist.

**2. Commonwealth Investigations.**—In 1907 the Commonwealth Government decided to demonstrate what might be attained commercially by the application of modern methods. A Federal Investigation Ship, the "*Endeavour*," was constructed specially for the work, and a Director of Fisheries was appointed. Experimental cruises were immediately undertaken. These shewed that the Commonwealth possesses an asset of considerable value in her sea fisheries. The scope and results of the inquiries are set out in the reports issued by the late Director.

**3. Scope of the Inquiry.**—The immediate scope laid down for the investigation was, shortly, as follows:—

- (i.) By various means of capture to ascertain what marketable food-fishes may be found in ocean waters adjacent to Australia.
- (ii.) In what quantity they may be taken.
- (iii.) To what extent they migrate, and whither.
- (iv.) How they may be conveniently and economically captured.
- (v.) By systematic survey to find out and chart suitable fishing grounds.

In addition to the work which was thus carried on in the various recognised methods of capture (including long-line and drift-net fishing, etc.), hydrographic survey work, etc., was carried out for the purpose of ascertaining the nature of the sea bottom, depth of water, currents, and sea temperature.

4. **The F.I.S. "Endeavour."**—The construction of the investigation vessel was undertaken in the Commonwealth, and was upon the lines shewn by the most recent European experience to be of greatest advantage, with necessary modifications to suit the Australian climate. A description of the vessel, which was the first Commonwealth-owned sea-going ship, is given in Official Year Book No. 6, p. 473. Up to the end of 1913, 85 cruises had been made in eastern and southern waters. In 1914, 13 more cruises were successfully undertaken; but the vessel with all on board, including the Director, was lost on her 99th cruise, which was commenced on 20th November, 1914.

5. **Trawling Grounds Discovered by the "Endeavour."**—According to information supplied by the Commonwealth Department of Trade and Customs, it would appear from the experiments carried out by the "Endeavour" on the shelf of the east coast of Australia, that the best trawling grounds extend from near Port Stephens, in New South Wales, past Sydney to Gabo Island, continuing across the eastern slope of Bass Strait past Flinders Island to Tasmania. These trawling grounds cover an area of approximately 6000 square miles, and are within easy access to two markets—Sydney and Melbourne. Extensive operations have been carried out on these grounds, and fish in payable quantities have been obtained.

A very rich trawling ground has also been located in the centre of the Great Australian Bight, estimated to cover an area of about 4000 square miles. The depth varies from 80 to 300 fathoms, but the greater portion of the trawlable area is situated between 100 and 200 fathoms. Excellent results were obtained by the "Endeavour" in this locality, fine rock ling and flathead being among the many choice varieties caught. This ground is situated about half-way between Adelaide and Albany, and about two days' steaming from either place.

In both of the trawling areas referred to above, considerable quantities of prime edible fish have been caught by the "Endeavour," thus demonstrating the potential value of Australia's deep-sea fisheries.

6. **The Continental Shelf.**—In addition to the primary duty of locating payable trawling grounds, extensive hydrographic surveys were carried out by the "Endeavour" along the coast from the north of Queensland to the west coast of Western Australia. Soundings, samples of the sea bottom, sea temperatures, etc., were taken, principally within the hundred-fathom line, in order to determine the suitability or otherwise of the localities for trawling. These observations were, in most instances, taken prior to the casting of the trawl net, which was the principal means of capture used by the "Endeavour" for ascertaining the richness of areas so far as the abundance of fish food was concerned. Most of the soundings have been charted and are available for public information.

The late Mr. H. C. Dannevig, formerly Director of Fisheries for the Commonwealth, in his "Report on the Continental Shelf on the East Coast of Australia" (Fisheries—Volume III., Part 6), explained how systematic surveys were carried out by him on the "Endeavour," and information obtained as to the nature of the continental shelf which surrounds the Australian continent.

The shelf consists of a narrow submerged ledge, varying in width from 10 miles to more than 100 miles, covered by a depth of less than 100 fathoms. From the outer edge of this ledge or shelf the bottom slopes away more or less abruptly towards the great ocean depths. It is within the area of the shelf that trawling grounds may be looked for.

On the east coast of Australia, the typical shelf commences at Sandy Cape in Queensland, and continues southwards. For about 360 miles, or south of Smoky Cape in latitude 31° S., the shelf presents peculiarities which gradually disappear further south. One of these peculiarities is that the shallow portion of the shelf continues seawards for a considerable distance, so that, for instance, at Double Island, the depth is only 50 fathoms. At this depth the shelf may here be said to terminate, as, at depths

from 60 to 100 fathoms, apart from being narrow and rocky, the sea floor is frequently so steep as to form part of the general slope downwards to abysmal depths. Another peculiarity is that northwards from Cape Moreton the shallow portion of the ledge is mainly covered with coral sand, which southwards gives way to a somewhat yellow sand, occasionally interspersed, in localities where the currents are strong, with gravelly beds.

Southwards from Smoky Cape the relative proportion between the inner and outer areas becomes reversed. At the Cape itself the shelf is narrow and divides into two equal belts; the shallow area of less than 50 fathoms, and a deeper stratum with an average depth of 70 fathoms. From here southwards the outer stratum becomes gradually wider at the expense of the inshore or secondary ledge, a maximum width of which is found in the Newcastle Bight, where the inshore ledge is seven to eight miles wide, while the outer ledge extends for another twenty-one miles before breaking off into the deep. Simultaneously with the appearance of the outside ledge at Smoky Cape the depth of the "break off" increases quickly to about 100 fathoms, and remains so for the remainder of the coast south to Gabo Island.

Southwards from Gabo Island the shelf widens out considerably, and consists entirely of the outward or deeper stratum, which, between 50 and 300 fathoms, is many miles wide. The edge gradually bends westward parallel with the coast until opposite the mouth of the Snowy River, where at a distance of about thirty miles from land it turns abruptly to the south. On approaching the bend, the shallow area (of less than 50 fathoms) has gradually extended at the expense of the outer ledge, and while the former continues westward through Bass Strait and connects Victoria and Tasmania, the latter extends as a relatively narrow belt along the eastern slope past Flinders Island and along the east coast of Tasmania.

The hundred-fathom line from the south of Tasmania to the western end of the Great Australian Bight was also surveyed by the "Endeavour." On that portion of the coast it was found that the continental shelf was considerably wider than on the east coast, and the slope of the shelf more gradual.

**7. Publications of the Commonwealth Fisheries Department.**—New and rare species of fish and marine forms secured by the "Endeavour" have been preserved, examined and described by various scientists, recognised as authorities on the subject of marine life. The following monographs have been published by the Department of Trade and Customs, the names of the authors being appended:—

SUBJECT.	AUTHOR.
<i>Mollusca</i> (2 parts) ... ..	Charles Hedley, F.L.S. (Assistant Curator and Conchologist, Australian Museum, Sydney).
<i>Fishes</i> (4 parts) ... ..	Allan R. McCulloch (Zoologist, Australian Museum).
<i>Sponges</i> ... ..	E. F. Hallmann, B.Sc. (Australian Museum).
<i>Assymetron</i> ... ..	Miss Janet W. Raff, B.Sc. (Melbourne University).
<i>Globigerina Ooze</i> ... ..	F. Chapman, B.A., A.L.S. (Palæontologist, National Museum, Melbourne).
<i>Hydroida</i> (3 parts) ... ..	W. M. Balé, F.R.M.S.
<i>Foraminifera and Ostræoda</i> ... ..	F. Chapman, B.A., A.L.S.
<i>Algæ</i> ... ..	A. H. Lucas, M.A. (Sydney Grammar School).
<i>Polychæta</i> ... ..	William Benham, M.A., D.Sc., F.R.S. (Professor of Biology at the University of Otago, N.Z.)
<i>Gephyrean Priapulæ</i> ... ..	Do. do. do.
<i>Sea Lilies, Star Fishes, Brittle Stars and Sea Urchins</i> ... ..	Hubert Lyman Clark (Curator of Echinoderms, Museum of Comparative Zoology, Cambridge, Mass., U.S.A.).
<i>Cephalopoda</i> ... ..	S. Stillman Berry.

The following papers were, in addition, prepared by the Director of Fisheries, the late H. C. Dannevig:—

First and Second Preliminary Reports on the Fishing Experiments carried out by the F.I.S. "Endeavour."

Notes on Australia's Fisheries, with a summary of the results obtained by the F.I.S. "Endeavour."

Paper on the Continental Shelf of the East Coast of Australia.

Paper on the Physiography of Bass Strait.

## § 6. The State Trawling Industry—New South Wales.

As far back as the year 1898, the New South Wales Government equipped a small vessel called "Thetis" for the purpose of investigating the potentialities of the State coastal waters in regard to the supply of edible fish. The knowledge gained from the cruises of this vessel was, of course, considerably augmented by that obtained since 1907 by the more modern methods adopted by the Commonwealth vessel "Endeavour." In view of the favourable outlook, the State Government determined to exploit the fishing industry. The necessary vessels and equipment were ordered, and by the middle of the year 1915, three steam trawlers built of steel and equipped in accordance with the most up-to-date methods had commenced operations in the coastal waters. Other vessels have also been built for trawling and surface fishing. It was not long before these vessels had proved the existence of highly valuable trawling grounds within a day's steam of Sydney Heads, and what is believed to be one of the most prolific areas in the world has been located within three hours steam of the home wharf. The ample product has been landed and sold to the public at extremely low rates in the State retail depôts as well as at occasional sales in markets and in country districts.

There are seven State retail fish depôts, six in the metropolitan district, and one at Newcastle.

Moreover, in connection with the undertaking, arrangements have been made for the collection and distribution of fish taken by coastal and estuarine fishermen. With this end in view, large refrigerating stations have been built at Newcastle, Clarence River and Port Stephens. The scheme has proved a great boon to fishermen by obviating the losses caused by the uncertain supply of ice and the absence of facilities for marketing.

There is a strong feeling that it is desirable for either the Government or the City Council to take over the entire control of the fishing industry.

## § 7. Fish Preserving.

Bounties have been provided by the Federal Government for fish preserving, the rate payable being  $\frac{1}{2}$ d. per lb. The amounts paid were £27 in 1907-8; £1727 in 1908-9; £311 in 1909-10; £115 in 1910-11; £168 in 1911-12; £103 in 1912-13; £80 in 1913-14; £156 in 1914-15; £106 in 1915-16, and £177 in 1916-17. It is hoped that the bounties, together with the increased yield that may be expected to result from the fisheries investigations now being conducted, will lead to a considerable output and consumption of locally-preserved fish. Up to the present but little development has taken place, the establishments which claimed bounty for fish preserving numbering only five in 1916-17, as compared with two in the preceding year, and five in 1914-15.

## SECTION XII.

## MINES AND MINING.

## § 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—The value of production from the mineral industry is now considerably less than that returned by the agricultural or the pastoral industry, nevertheless it was the discovery of gold in payable quantities that first attracted population to Australia, and thus laid the foundation of its nationhood. Prior to 1851, the year when Hargraves' memorable discovery was made, coal and copper had both been mined to some extent, and the existence of deposits of other minerals, including gold, had been proved. But it was the news of the sensational finds of the precious metal in 1851 and the year immediately following that brought about a constant stream of immigration, and caused an increase in population from 221,000 at the end of 1841 to upwards of 1,168,000 at the end of 1861.

2. **Extent of Mineral Wealth.**—The large production of gold, silver, copper, and tin, the extent of the coal deposits, the presence of large quantities of iron ore, and the great variety of minerals found in appreciable quantities, suggest that the future history of mining will, in all probability, be even more remarkable than that of the past. For the extent of the total mineral wealth of Australia cannot yet be regarded as well ascertained, since the mineral exploration of the country is, after all, still in its infancy. The presence of considerable deposits of valuable minerals has long been known. Thus, coal was discovered in 1797, and a shipload was exported to Bengal in 1799; silver was discovered by Count Strzelecki as early as 1839, and was worked as early as 1864; copper mining dates back to 1844; lead to about 1848; iron to about 1850; while the discovery of gold in payable quantities dates back to 1851. Cobalt, nickel, manganese, chromium, tungsten, molybdenum, mercury, antimony, bismuth, zinc, radio-active ores, etc., have all been found, some in fairly large quantities.

Among the more valuable non-metalliferous substances may be mentioned coke, kerosene shale, graphite, alunite, asbestos, diatomaceous earth, clays, ochres, etc.; in building stones, sandstones, syenites, granites, basalts, augite-andesite, porphyries, serpentines, slates, limestones, and marbles; in precious stones, diamonds, emeralds, rubies, sapphires, amethysts, precious opal, turquoise, topazes, garnets, chrysolites, cairngorm, agates, etc. In general it may be said that the variety of Australian mineral wealth is very great.

3. **Value of Production during 1916.**—The continuance of the war in 1916 naturally had a very serious effect on the mineral industry in Australia, although this was to some extent compensated for by the high prices ruling for industrial metals, particularly copper. In New South Wales, the returns for 1916 shewed an advance of over £900,000 on those for the previous year, due principally to the increased return from silver, lead and copper. In Victoria, owing to the decline in the gold yield, the returns for 1916 shewed a decrease in production of about £333,000. The Queensland production shewed an advance of £699,000, due chiefly to increased yield from copper. South Australia shewed an increase of about £212,000, contributed to most largely by copper and gold. For Western Australia the falling-off in 1916 amounted to about £585,000, and was due entirely to the reduced gold yield. The Tasmanian production shewed an increase in 1916 of about £295,000 over the return for the previous year, the improvement being due to the heavier yield from blister copper.

The comparative value of the production of minerals raised in each State during 1916 is given in the following table:—

## COMMONWEALTH MINERAL PRODUCTION IN 1916.

Minerals.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	N.T.*	C'wealth.
	£	£	£	£	£	£	£	£

\* Year ended 30th June, 1917.

† Not available for publication.

It may be pointed out in connection with the figures given in the above table that the totals are exclusive of returns relating to certain commodities, such as stone for building and industrial uses, sand, gravel, brick clays, lime, cement, and slates, which might rightly be included under the generic term "mineral." Valuations of the production of some of these may be obtained from the reports of the various Mines Departments, but in regard to others it is impossible to obtain adequate information. In some instances, moreover, the published information is of little value. Thus, the New South Wales Mines' Report supplies the value of exports only in connection with building stone, and it is obvious that such figures are of little value as regards production, while the Victorian figures are incomplete. It has therefore been considered advisable to discard both totals. By restricting the comparison to items in connection with which properly comparable information can be obtained for each State, it is believed that a satisfactory estimate of the progress of the mineral industry can be more readily obtained. The items excluded from the total for New South Wales in 1916 consist of—lime, £38,958; marble, £1625; Portland cement, £420,928; building stone, £65; slates, £861; and grindstones, £121. The South Australian figures are exclusive of flint pebbles, £474. For South Australia the principal items in the unenumerated class are phosphate-rock, £5839; fireclay, £1204; while the sulphur contents of the copper ores are valued at £10,378. Iron pyrites accounted for £13,597 in the total of the unenumerated class in Tasmania.

4. Total Production to end of 1916.—In the next table will be found the estimated value of the total mineral production in each State up to the end of 1916. The figures given in this table are also exclusive of the same items referred to in connection with the preceding table. Thus the total for New South Wales falls short by £4,008,000 of that published by the State Department of Mines, the principal items excluded being cement, £3,496,000; lime, £448,000; and building stone, £26,000.

## COMMONWEALTH MINERAL PRODUCTION TO END OF 1916.

Minerals.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	North'n Territory.	C'wealth:

Tin ...	10,589,308	816,996	8,395,443	...	1,261,569	13,407,043	409,989	35,480,347
Coal ...	83,356,373	3,518,647	6,985,984	...	1,657,415	684,337	...	96,213,256
Other ...	24,659,026	617,532	2,751,594	2,450,007	108,396	296,144	77,149	30,589,848
Total ...	269,145,877	303,191,954	118,079,002	33,836,893	135,279,663	41,839,142	3,064,856	904,437,387

The "other" minerals in New South Wales include antimony, £331,948; bismuth, £143,030; chrome, £102,617; coke, £3,261,537; diamonds, £129,071; iron, £3,018,380; opal, £1,413,910; oil shale, £2,388,205; wolfram, £196,186; and zinc, £12,182,029. In the Victorian returns antimony ore was responsible for £428,258. Included in "other" in the Queensland production were opal, £178,195; gems, other, £300,627; bismuth and wolfram, £1,049,050; antimony ore, £58,343; manganese, £68,512; limestone flux, £432,006; and ironstone flux, £345,014. The chief item in South Australian "other" minerals was salt, £1,075,888, but large values must also be apportioned to limestone flux, the yield from the latter amounting to over £523,000 in the last 10 years. Considerable values from gypsum and rock phosphates are also included. In the Tasmanian returns limestone flux was responsible for nearly £100,000, and iron ore for about £26,000, while the figures for recent years include values for iron pyrites. In the Northern Territory returns wolfram constitutes the chief item in "other" minerals.

It will be convenient in the succeeding pages to deal first with gold and the various metals, then with non-metallic minerals and precious stones, and finally to furnish some account of the extent of employment in mining generally.

## (A) METALS.

## § 2. Gold.

1. *Discovery of Gold in Various States.*—The discovery of gold in payable quantities was an epoch-making event in Australian history, for, as one writer aptly phrases it, this event "precipitated Australia into nationhood." A more or less detailed account of the finding of gold in the various States appears under this section in Official Year Books Nos. 1 to 4, but considerations of space preclude its repetition in the present issue.

2. *Production of Gold at Various Periods.*—In the following table will be found the value of the gold raised each year in the several States and in the Commonwealth from the dates when payable discoveries were first reported. Owing to defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development, large quantities of gold were taken out of Australia by successful diggers, who preferred to keep the amount of their wealth secret. For South Australia the records in the earlier years are somewhat irregular, and the remark applies to some extent also to the returns for Western Australia and Tasmania.

In New South Wales the yield for 1916 was about 24,000 ozs. lower than in 1915, and was the lowest recorded since 1889. In Victoria the yield for 1916 shewed a decrease of 72,415 ozs. fine on that for the preceding year. The falling-off was largely due to decreased returns from the Beechworth district, where the total yield in crude ounces was stated as 57,238 in 1916, as against 122,549 in 1915. A fall of nearly 16,000 crude ounces was shewn by the Ballarat district, but the Bendigo returns were over 30,000 ozs. in excess of those for the preceding year. In Queensland the yield in 1916 was nearly 35,000 ozs. less than in the preceding year. As is the case in other States where there is a diminishing production, the decline is due to the gradual depletion of the mines in the principal fields. There was an increase of 1688 ozs. in the returns for South Australia for 1916, the yield proving the highest for the last decennium. For Western Australia the figures shew a decrease of nearly 149,000 ozs. in 1916, as compared with.

1915, diminished returns being recorded in the outputs from all the fields except Kimberley and Phillips River. For Tasmania there was a decline of about 2700 ozs., chiefly due to diminished yields at Mathinna and the West Coast.

The amount of gold raised in the Commonwealth in any one year attained its maximum in 1903, in which year Western Australia also reached its highest point. For the other States of the Commonwealth the years in which the greatest yields were obtained were as follows:—New South Wales, 1852; Victoria, 1856; Queensland, 1900; South Australia, 1906, and Tasmania, 1899.

The following table shews the quantity in fine ounces of gold raised in each State and in the Commonwealth during each of the last ten years, the value of one ounce fine being £4 4s. 11½d.:—

**QUANTITY OF GOLD PRODUCED IN THE COMMONWEALTH, 1907 to 1916.**

**3. Changes in Relative Positions of States as Gold Producers.**—A glance at the figures in the table shewing the value of gold raised will sufficiently explain the enormous increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of the year 1889, when its output was surpassed by that of Queensland, Victoria maintained its position as the chief gold-producer for a period of forty-seven years, or up to 1898, when its production was outstripped by that of Western Australia, the latter State from this year onward contributing practically half, and so far as recent years are concerned more than half the entire yield of the Commonwealth. New South Wales occupied the second place on the list until 1874, when Queensland returns exceeded those of the parent State, a condition of things that has been maintained ever since. South Australia has occupied the position of lowest contributor to the total gold yield of the Commonwealth since the year 1871. Taking the average of the last ten years, the relative position of each State in regard to the gold production of the Commonwealth was as follows:—

**RELATIVE POSITION OF STATES AS GOLD PRODUCERS, 1907 to 1916.**

State.	Annual Average of Gold Production, 1907 to 1916.	Percentage on Commonwealth.	State.	Annual Average of Gold Production, 1907 to 1916.	Percentage on Commonwealth.
<b>Commonwealth ...</b>	<b>£10,462,541</b>	<b>100.00</b>	<b>New South Wales</b>	<b>£733,559</b>	<b>7.01</b>
Western Australia	5,897,303	56.37	Tasmania ...	156,028	1.49
Victoria ...	2,127,717	20.34	South Australia	25,375	0.24
Queensland ...	1,504,602	14.38	North'n Territ'y	17,957	0.17

**4. Methods of Gold Mining adopted in Each State.**—(i.) *New South Wales.* In New South Wales the earlier "rushes" were to surface alluvial or shallow-sinking grounds. Many of these were apparently soon worked out, but there is reason to believe that in some instances payable results would be obtained by treating the rejected wash-dirt on more scientific principles. With the exhaustion of the surface deposits discoveries were made by sinking to what are called deep alluvial leads, representing the beds of old drainage channels in Pliocene and Pleistocene times. The first of these deep alluvial leads was discovered at Forbes, in New South Wales, in 1862. The Tertiary deep leads at Gulgong were discovered in 1871. Cretaceous leads occur at Tibbooburra, and detrital gold has been found in permo-carboniferous conglomerates at Tal-lawang. The method of dredging is at present being extensively used for winning gold from

the beds of running streams, and from loose river flats and other wet ground where sinking would be impracticable. The system was introduced from New Zealand, where it was originally applied with great success on the Clutha River, and there are now dredges working on practically all the auriferous rivers of New South Wales. Hydraulic sluicing is employed also in several places, the necessary machinery being fitted to a pontoon for convenience in moving from place to place. The quantity of alluvial gold obtained, other than by dredging, amounted to 3433 ozs. in 1916, the chief yields being—Hill End, 204 ozs.; Windeyer, 366 ozs.; Major's Creek, 123 ozs.; Adelong, 617 ozs.; Sofala, 483 ozs.; Uralla, 183 ozs.; Tuena, 170 ozs.; Tumut, 178 ozs. The quantity obtained by dredging was 19,918 ozs.; the largest returns being obtained at Araluen, 6604 ozs.; Adelong, 6909 ozs.; Braidwood, 433 ozs.; Gundagai, 4255 ozs.; Stuart Town, 1185 ozs.; Tumbarumba, 205 ozs. The dredges in operation during 1916 numbered 68, of which 22 were of the bucket type and 47 were suction plants. In the recovery of gold 15 bucket dredges and 6 pumping plants were employed, while 6 bucket dredges and 41 pumping plants were engaged in the winning of stream tin. The value of the plants in operation was estimated at £338,486. The quantity of gold won from quartz amounted to 58,352 ozs. At the present time the Cobar district is the chief centre of the production from quartz, the yields from the Cobar and Canbelego fields included therein being respectively 7011 ozs. and 20,501 ozs. Next come the Wellington field with 9937 ozs.; Peak Hill, 4002 ozs.; Hill End, 2750 ozs.; Wyalong, 2724 ozs.; Hill Grove, 2700 ozs.; and Cootamundra, 1217 ozs. The Mount Boppy mine in the Cobar district has for some years been the premier gold mine in the State.

The table below shews as far as can be ascertained the yield from alluvial and quartz mining in each of the principal districts during 1916. Owing to the circumstance that it was impossible to obtain complete returns from all the mine and battery owners the total for the State necessarily falls short of that given in preceding pages.

**GOLD WON IN NEW SOUTH WALES, ALLUVIAL AND QUARTZ, 1916.**

(ii.) *Victoria.* Lode mining predominates in Victoria, although a considerable amount of gold is obtained from alluvial workings, both surface and deep leads. The deepest mines in Australia are found in the Bendigo district, where there are two shafts 4614 and 4318 feet deep respectively. Altogether there were some four years ago no less than fifty-three shafts in this district which had reached a depth of over 2000 feet. A considerable amount of attention is given to dredging and hydraulic sluicing, particularly in the Beechworth, Maryborough, Castlemaine, Ararat, Stawell, and Ballarat districts, the number of plants in operation at the end of 1916 being 67, of which 34

were bucket dredges, 21 pump hydraulic sluice, and 12 jet elevator. The total quantity of gold won by dredging and sluicing in 1916 was 48,724 ozs., the total area treated being 344 acres. Tin to the value of £11,712 was also won. The yields from alluvial workings and quartz reefs as returned (in crude ounces) from the chief mining districts of the State during last year were as follows:—

**GOLD WON IN VICTORIA, ALLUVIAL AND QUARTZ, 1916.**

District.	Alluvial.	Quartz.	Total.

The largest output from lode mines in 1916 was furnished by the A1 Gaffney's Creek, with 11,851 ozs., followed by the Ajax Central at Daylesford, with 7350 ozs. Of the deep alluvial mines the Cathcart Central Company, at Ararat, produced 16,510 ozs. In dredging, Cock's Pioneer, at Beechworth, was the most successful, with 6706 ozs.

(iii.) *Queensland.* Operations in Queensland are at present chiefly confined to reefing, the yield from alluvial in 1916 being only 2147 ozs., while the quantity produced from stone treated was 103,320 ozs.; from copper and other ores 105,264 ozs.; and from old tailings 4431 ozs.; making a total production of 215,162 ozs., valued at £913,951. The yields from the principal fields are given below:—

(iv.) *South Australia.* In South Australia alluvial gold has been worked for many years in the gullies round Adelaide, while a fair amount of gold has been obtained by this method at Teetulpa, in the northern areas. The battery and cyanide returns as published in the "Mining Review" shew that the chief producing centres in 1916 were Tarcoola, Wadnaminga, and Deloraine.

(v.) *Western Australia.* The auriferous deposits of Western Australia may be grouped under three headings—(1) Superficial deposits, (2) Deposits in beds of conglomerate, and (3) Lode and vein deposits. The first class includes a number of deposits of alluvial type, either in the beds of existing watercourses or in deep leads, up to 100 feet or more below present surface level. Associated with these are deposits of crystalline gold in “pug,” oxide of iron, and soft weathered portions of underlying bed rock. Considerable areas of auriferous surface soil are also found, and these have apparently originated from the denudation by weathering of the bed rock and its associated veins. The shallow surface deposits have been worked by ground sluicing wherever water was available, but the most of the ground has been worked by “dry-blowing.” The pug and clayey bedrock are usually treated in puddling machines or stamp batteries and Huntington mills or by a combination of both methods. In regard to (2) it may be noted that in several localities on the Pilbara goldfield and in one on the Yalgoo, gold has been found in conglomerate of the Nullagine series of rocks, now tentatively accepted as of Cambrian age. The gold is crystalline and is confined to the interstitial cementing material. Occasional occurrences of gold are met with in laterite conglomerate of tertiary and post tertiary age, and at Kintore in conglomerate of the same age. Lode and vein deposits alluded to in (3) are found in great variety in Western Australia. The gold is always found associated with iron pyrites in the un-oxidised portions of the lodes, and often also with copper pyrites, arsenical pyrites and galena. Tellurides of gold occur at times, and scheelite is a common accessory mineral. The principal auriferous rocks are of very great geological age, most probably pre-Cambrian, and possibly Archæan, and have all been subjected to intense metamorphism. It is found that the rich veins are not restricted to any one particular description of rock—granite, quartz, porphyry, quartz dolerite, diorite, etc., and even metamorphic sedimentary country rock have been found to carry them in various parts of the State. The total production of gold from all sources during 1916 was 1,061,398 ounces, of which only about 0.2 per cent. was alluvial. The yields in each district were as shewn below:—

**GOLD WON IN WESTERN AUSTRALIA, ALLUVIAL, QUARTZ, Etc., 1916.**

Goldfields.	Alluvial.	Dollied and Specimens.	Crushed.	Total.
	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.

<b>Total ... ..</b>	<b>1,493</b>	<b>8,559</b>	<b>1,021,675</b>	<b>1,031,727</b>

The figures in the previous table are compiled from returns from the individual mines and are somewhat incomplete; the total is therefore less than that shewn on page 435, which represents mint and export returns.

(vi.) *Tasmania*. The yield from Tasmania in gold mining is chiefly obtained from quartz reefing, although there is a little alluvial mining carried on, as shewn in the table hereunder. As the table shews, however, the bulk of the production of gold is obtained in connection with copper from the West Coast. The yields as returned from each district in 1916 are given below :—

**GOLD WON IN TASMANIA, ALLUVIAL AND QUARTZ, 1916.**

District.	Quartz.	Alluvial.	Cyanide.	Blister Copper.	Total.
	Ozs.	Ozs.	Ozs.	Ozs.	Ozs.
Beaconsfield ... ..	...	...	4,671	...	4,671
Mathinna ... ..	1,663	123	298	...	2,084
Mt. Victoria ... ..	323	56	...	...	379
Warrentinna ... ..					
Mt. Cameron ... ..					
Lefroy ... ..	...	22	...	...	22
Lisle... ..	...	235	...	...	235
Golconda ... ..					
Lilydale ... ..					
West Coast ... ..	10	22	...	8,803	8,835
Total ... ..	1,996	458	4,969	8,803	16,226

The total production was valued at £67,072, equal to 15,790 ozs. fine, of which about 4,671 ounces were produced by the Tasmania Gold Mine, at Beaconsfield. During the year 1916, about 9,000 ounces of gold were produced from the ores treated at the reduction works of the Mt. Lyell Mining and Railway Co. Ltd.

(vii.) *Northern Territory*. Pine Creek was for some years the chief mining field in the Northern Territory, but operations have for a long period been carried on in a desultory manner, chiefly by Chinese labour. Lately the output has fallen still lower owing to the transference of Chinese gold miners to tin and wolfram mining. It is stated that the field has been unfairly exploited, the rich pockets only having being scooped out without any systematic prospecting. Confidence in the auriferous prospects of the area was also shaken by the failure of various companies, but in the view of the Mines Department the ground has not been properly tested or systematically mined. The metal is also worked at Bridge Creek, Union Reefs, The Shackle, Fletcher's Gully and Tanami fields.

**5. Remarkable Masses of Gold.**—Allusion has already been made in preceding Year Books to the discovery of "nuggets" and other remarkable masses of gold, but it is not proposed to repeat this information in the present issue. It may be noted, however, that in 1913 nuggets yielding 180 ozs., 50 ozs., and 23 ozs. were obtained at Poseïdon in Victoria. In the same State also, and near the spot at Moliagul where the famous "Welcome Stranger," weighing 2284 ozs., was discovered in 1869, a mass of quartz yielding 94 ozs. of gold was obtained in 1913. A small lump of quartz from a mine at Tallangatta furnished 44 ozs. In an alluvial deposit at Corindhap four nuggets weighing respectively 100, 60, 60, and 30 ozs. were obtained at a depth of 13 feet.

**6. Modes of Occurrence of Gold in Australia.**—This subject has been alluded to at some length in preceding issues of the Year Book, but considerations of space will not permit of repetition in the present issue.

**7. Place of Commonwealth in the World's Gold Production.**—In the table given below will be found the estimated value of the world's gold production, and the share of the Commonwealth therein during the ten years 1907 to 1916. The figures given in the table have been compiled chiefly from returns obtained directly by the Commonwealth Bureau of Census and Statistics from the gold-producing countries of the world.

## WORLD'S GOLD PRODUCTION, 1907 to 1916.

Year.	World's Production of Gold.	Gold produced in Commonwealth	Percentage of C'wealth on Total.
	£	£	%
1907 ... ..	84,671,000	13,518,000	15.97
1908 ... ..	92,274,000	13,062,000	14.16
1909 ... ..	92,985,000	12,611,000	13.56
1910 ... ..	93,375,000	11,560,000	12.38
1911 ... ..	95,083,000	10,547,000	11.09
1912 ... ..	96,785,000	9,877,000	10.21
1913 ... ..	92,523,000	9,374,000	10.13
1914 ... ..	89,812,000	8,730,000	9.72
1915 ... ..	96,865,000	8,270,000	8.54
1916 ... ..	94,405,000	7,075,000	7.50

While the production of gold in the Commonwealth shows a considerable decrease during the nineteen years from 1897 to 1916, the world's total production more than doubled itself in the same period. The following table will be found interesting as shewing the various foreign countries where the chief increases have taken place during the interval in question:—

## INCREASE IN GOLD YIELD, VARIOUS COUNTRIES, 1897 to 1916.

Country.	1897.	1900.	1914.	1915.	1916.
	£	£	£	£	£
United States ...	11,787,000	16,269,000	19,425,000	20,761,000	19,026,000
Canada ...	1,240,000	5,742,000	3,284,000	3,900,000	3,952,000
Costa Rica ...	2,000	31,000	104,000	152,000	202,000
Colombia ...	...	...	949,000	1,121,000	*
Transvaal ...	11,654,000	1,481,000	35,657,000	38,628,000	39,490,000
Rhodesia ...	800	308,000	3,630,000	3,887,000	3,952,000
Gold Coast ...	85,000	38,000	1,744,000	1,720,000	1,630,000
Madagascar ...	8,500	142,000	222,000	286,000	195,000
India ...	1,571,000	1,893,000	2,338,000	2,370,000	2,303,000
Corea ...	208,000	371,000	680,000	765,000	*
Japan ...	142,000	290,000	1,150,000	1,331,000	*
Netherlands ...	...	...	...	...	...
East Indies ...	24,000	112,000	478,000	*	*

\* Not available.

The largest increase was recorded in the Transvaal, where the production more than trebled itself in the eighteen years 1897 to 1916.

8. **Employment in Gold Mining.**—The number of persons engaged in gold mining in each State in 1901 and during each of the last five years is shewn in the following table:—

## PERSONS EMPLOYED IN GOLD MINING, 1901 and 1912 to 1916.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Terr.	C'w'lth.
	No.	No.	No.	No.	No.	No.	No.	No.
1901 ...	12,064	27,387	9,438	1,000	19,771	1,112	200	70,972
1912 ...	3,898	11,856	3,981	920	13,700	485	263	35,103
1913 ...	3,570	11,931	3,123	800	13,445	481	175	33,525

1916 ...	2,317	6,402	1,900	150	9,563	176	99	20,607

### 3. Platinum and the Platinoid Metals.

1. **Platinum.**—(i.) *New South Wales.*—The existence of platinum was first noted in New South Wales in 1851 by Mr. S. Stutchbury, who found a small quantity near Orange. Since the year 1878 small quantities of the metal have been obtained from beach sands in the northern coastal district. Platiniferous ore was noted in 1889 at Broken Hill. The chief deposits at present worked in the State are situated at Platina in the Fifield division, near Parkes, but the entire production in 1916 was small, amounting to only 82 ozs., valued at £687, while the total production recorded to the end of 1916 amounted to 13,814 ozs., valued at £35,437.

At Platina, gold is found in association with the platinum, and it is estimated that there are 200 acres of metalliferous country sufficiently rich to yield a satisfactory return, provided it were worked on a large scale with an abundant water supply.

(ii.) *Victoria.* In Gippsland, Victoria, the metal has been found in association with copper. The production of platinum in 1913 amounted to 127 ozs., and was contained in matte produced by the Gippsland Copper, Platinum, and Gold Mining and Smelting Company, from ores raised from the old mine at Cooper's Creek. There was no production during the last three years.

2. **Osmium, Iridium, etc.**—(i.) *New South Wales.* Small quantities of osmium, iridium, and rhodium are found in various localities. As far back as 1860, the Rev. W. B. Clarke stated that he found native iridium. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River, about 15 miles from Oban; on the beach sands of the northern coast; in the gem sand at Bingara, Mudgee, Bathurst, and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content.

(ii.) *Victoria.* In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

(iii.) *Tasmania.*—For many years osmiridium has been known to exist in the bed of the Savage River, on the West Coast, and in rivulets and creeks in the Serpentine country, but it was not until early in 1911 that efforts were made to work the deposits. During that year the price paid for the mineral was as high as £7 10s. per oz., and about 100 men were engaged in the search for it. The quantity produced amounted to 272 ozs., valued at £1888. In 1912 the production was 779 ozs., valued at £5742, or an average of £7 7s. 9d. per oz. The production in 1913 amounted to 1262 ozs., valued at £12,016, in 1914 to 1019 ozs., valued at £10,076, in 1915 to 246 ozs., valued at £1,581, and in 1916 to 222 ozs., valued at £1,899. A specimen found by a prospector at the Whyte River weighed 2 ozs. 8 dwt. 7 gr. It is stated that the selling price has occasionally reached as high as £11 per oz., but this extraordinary value is dependent on causes which are not too well known. Owing to the war, the market in 1914 was for a time closed, but a parcel of 13 ozs. forwarded to America was sold at an average of £5 13s. 6d. per oz. The declining production in 1915 and 1916 was due to difficulty in disposing of the metal. Besides a steady and increasing use in the manufacture of fountain pens there is at present some demand for iridium and osmiridium in connection with the prevailing fashion in hard platinum jewellery.

### § 4. Silver.

1. **Occurrence in Each State.**—Particulars regarding the occurrence of silver in each State will be found in preceding Year Books, Nos. I. to V., but considerations of space preclude the repetition of this matter in the present volume.

2. **Development of Silver Mining.**—In illustration of the development of silver mining in Australia the following table has been compiled, shewing the production of silver, silver-lead and ore, and lead from each State during the years 1881, 1891, 1901, and the five years ending 1916:—

**PRODUCTION OF SILVER AND LEAD, AUSTRALIA, 1881 to 1916.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tasmania.	North. Terr.	C'wealth.
	£	£	£	£	£	£	£	£
1881	...	5,239	13,494	1,182	11,224	...	...	31,139
1891	3,621,614	6,017	21,879	1,787	250	62,138	4,140	3,717,825
1901	1,954,964	6,550	69,234	3,886	7,718	325,335	...	2,367,687
1912	3,745,796	2,000	121,855	326	41,995	309,098	820	4,221,890
1913	4,173,867	2,074	134,121	1,400	82,422	319,997	2,228	4,716,109
1914	3,611,369	1,540	38,640	529	69,228	96,225	545	3,818,076
1915	3,321,101	1,250	34,610	902	63,629	91,689	1,073	3,514,254
1916	4,084,623	1,239	50,588	5,173	109,221	153,796	275	4,404,915

*New South Wales.* The figures quoted for New South Wales in the above table represent the *net* value of the product (excluding zinc) of the silver-lead mines of the State. In explanation of the values thus given, it must be noted that the metallic contents of the larger portion of the output from the silver-lead mines in the State are extracted outside New South Wales, and the Mines Department considered, therefore, that the State should not take full credit for the finished product. Hence the *net* value referred to above relates to that of the ore, concentrates, and bullion, as declared by the several companies to the Customs Department at date of export. The real importance of the State as a producer of silver, lead, and zinc is thus to some extent lost sight of. The next table, however, which indicates the value of these metals locally produced, and the value of concentrates exported during the last five years, will shew the estimated total value of the yield from the three metals:—

**VALUE OF PRODUCTION FROM SILVER-LEAD MINES OF NEW SOUTH WALES,  
1912 TO 1916.**

Year.	Value of Silver, Lead, and Spelter produced within the C'wealth.	Value of Concentrates Exported.	Total.
	£	£	
1912	2,477,442	3,692,352	6,169,794
1913	2,709,867	3,759,691	6,469,558
1914	2,592,322	3,004,248	5,596,570
1915	1,634,717	3,176,434	4,811,151
1916	1,079,290	3,861,018	4,940,308

As regards silver alone, the following table, which has been prepared on a basis similar to that on which the preceding table was compiled, shews the estimated total quantity and value of that metal yielded by the mines of New South Wales up to the end of 1906 and during the last ten years:—

**ESTIMATED QUANTITY AND VALUE OF SILVER YIELDED BY MINES OF  
NEW SOUTH WALES TO END OF 1916.**

Period.	Produced in Australia.		Contained in Concentrates, etc., Exported.		Total Production.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
To the end of 1906 ...	Fine ozs. 103,079,415	£ 16,356,310	Fine ozs. 114,196,466	£ 19,546,757	Fine ozs. 217,275,881	£ 35,905,067
1907 ...	5,921,457	795,982	6,228,225	845,845	12,149,682	1,641,827
1908 ...	6,484,288	693,034	5,499,381	587,768	11,983,669	1,280,602
1909 ...	3,717,016	382,605	6,867,775	732,563	10,584,791	1,115,168
1910 ...	5,196,323	561,280	7,608,336	843,257	12,804,659	1,404,537
1911 ...	5,731,468	620,578	8,797,677	973,210	14,529,145	1,593,788
1912 ...	5,220,538	641,707	8,293,711	1,036,715	13,514,249	1,678,422
1913 ...	5,908,638	719,249	8,596,251	1,038,714	14,504,889	1,757,963
1914 ...	5,481,286	630,658	7,879,240	820,754	13,360,526	1,451,412
1915 ...	3,081,952	325,210	5,222,927	544,055	8,304,879	869,265
1916 ...	1,962,091	279,592	6,107,280	839,751	8,069,371	1,119,343
Total ...	151,784,472	22,006,205	185,297,269	27,811,389	337,081,741	49,817,594

**3. Chief Centres of Silver Production.**—Broken Hill, in New South Wales, and Zeehan, in Tasmania, are the great centres of silver production in Australasia. The production in Queensland has, however, considerably expanded during the last few years.

(i.) *New South Wales.* (a) *Broken Hill.* A description of the silver-bearing area in this district is given in preceding issues of the Year Book. During 1913 the output of ore from the mines in this division amounted to 1,744,000 tons, the highest recorded in the history of the field, but owing to the dislocation caused by the war the quantity raised in 1914 decreased to 1,442,000 tons. For 1915 the production was returned as 1,505,000 tons, but the British Junction, North Junction Lead and Block 10 mines were closed throughout the year. During 1916, when the Junction North mine remained closed, the production was returned at 1,020,000 tons, but the value of the output was £4,480,000 as compared with £3,342,000 in 1915.

Although the returns are not complete in all cases, the following table relating to the mines at Broken Hill will give some idea of the richness of the field:—

**RETURNS OF BROKEN HILL SILVER MINES TO END OF 1916.**

Mine.	Authorised Capital.	Value of Output to end of 1916.	Dividends and Bonuses Paid to end of 1916.
	£	£	£
Broken Hill Proprietary Co. Ltd. ...	600,000	*44,072,310	11,110,503
Broken Hill Proprietary Block 14 Co. Ltd. ...	155,000	3,659,500	588,660
British Broken Hill Proprietary Co. Ltd. ...	339,000	3,447,020	633,800

Totals ...	4,637,000	†91,335,020	19,415,279

\* The value of the ores purchased during the years 1908 to 1914 is not included.  
understated owing to incomplete returns.

† Not available.

† Output

(b) *Yerranderie*. The mines on the Yerranderie field in the Southern Mining District produced 174,321 ozs. of silver in 1916, besides 234 ozs. of gold, and 585 tons of lead, the total production being valued at £42,000. Mining operations in this locality are carried on under considerable difficulties owing to the heavy cost of transport, the cost of cartage to and from Camden railway station—£2 5s. per ton—preventing successful exploitation of the lower grade ores.

(c) *Cobar*. A considerable quantity of silver is obtained from the Great Cobar Mine and attached properties, the production in 1914 amounting to 24,305 ozs. Owing to the dislocation of the industry caused by the war the yield in 1915 fell to 1838 ozs. but it rose again in 1916 to nearly 48,000 ozs.

(ii.) *Tasmania, West Coast*. The production of silver-lead ore in 1916 was 11,229 tons, valued at £153,796, to which the Zeehan Mines contributed £48,593. In the Mt. Farrell District the North Mt. Farrell contributed £42,651, while the Magnet Mines returned a yield of £60,660, and the Round Hill, Mt. Claude, £2984. The silver contents of the copper ores treated at the Mt. Lyell works amounted in 1916 to 328,700 ozs.

(iii.) *Queensland*. The yield for the chief silver-producing centres in 1916 was as follows:—Charters Towers, silver £2816, lead £1155; Cloncurry, silver £7664; Etheridge, silver £2817, lead £5901; Mt. Morgan, silver £4911; Herberton, silver £6293, lead £1873; Burketown, lead £9805, silver £1035.

(iv.) *South Australia*. Rich specimens of silver ore have been discovered at Miltalie and Poonana, in the Franklin Harbour district, also at Mount Malvern, near Rapid Bay, and in the vicinity of Blinman and Farina. The surrounding district is highly mineralized, but, so far, has not been thoroughly prospected. The production of silver and silver-lead ore in 1916 was valued at £5000.

(v.) *Western Australia*. The quantity of silver obtained as a by-product and exported in 1916 was 173,012 ozs., valued at £22,258. In addition, lead and silver-lead to the value of £12,033, and 3523 tons of pig lead, valued at £74,930, were exported.

(vi.) *Northern Territory*. Silver-lead ores are worked near Pine Creek, and at Mount Shoebridge near Brock's Creek railway station. About 178 tons of ore were shipped during 1916 from McCarthy's lead mine.

4. **World's Production of Silver.**—The world's production of silver during the last ten years for which particulars are available is estimated to have been as follows:—

#### WORLD'S PRODUCTION OF SILVER, 1907 to 1916.

Year ...	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.
World's production in 1000 fine ozs.*	183,386	212,570	227,291	240,223	254,214	250,979	214,391	171,429	179,754	177,000

\* Add 000 to figures for fine ounces.

Australasia's share in the world's silver production in 1915 was estimated at 4,296,000 ounces, or about 2 per cent. on the total production.

5. **Prices of Silver.**—As the production of silver is dependent to a very large extent on the price realised, a statement of the average price per standard ounce in the London market at various periods and during the last five years is given below:—

#### PRICE OF SILVER, 1881 to 1916.

Year ...	1881.	1891.	1901.	1911.	1912.	1913.	1914.	1915.	1916.
Pence per standard oz.	51 $\frac{3}{4}$	45 $\frac{1}{16}$	27 $\frac{3}{16}$	24 $\frac{9}{16}$	28 $\frac{1}{16}$	27 $\frac{9}{16}$	25 $\frac{5}{16}$	23 $\frac{1}{16}$	31 $\frac{5}{16}$

During the month of November, 1906, owing to the small sales in New York, and also to the fact that the Indian, American, and Mexican Governments were all buying silver, the price rose to 33½d., the highest realised since 1893, when the average stood at 36½d.

6. **Employment in Silver Mining.**—The number of persons employed in silver mining in 1901 and during each of the last five years is given below :—

**NUMBER OF PERSONS EMPLOYED IN SILVER MINING, 1901 and 1912 to 1916.**

Year.	N.S.W.	Victoria.	Q'land.	S Aust.	W. Aust.	Tasmania	N. Terr.	C'wealth.
	No.	No.	No.	No.	No.	No.	No.	No.
1901...	6,298	...	40	150	...	2,414*	†	8,902‡
1912...	9,062	...	208	30	60	1,681	...	11,041
1913...	9,357	...	204	30	132	1,272	16	11,011
1914...	8,242	...	130	25	100	491	10	8,998
1915...	5,564	...	49	25	70	519	86	6,313
1916...	6,461	...	62	25	\$244	555	86	7,433

\* Including copper miners. † Included in South Australia. ‡ Including copper miners in Tasmania. § Lead ore.

As the table shews, the bulk of the employment was in New South Wales and Tasmania, the quantity of silver raised in the other States, excepting Queensland, being unimportant.

**§ 5. Copper.**

1. **Production of Copper.**—The production of copper in the various States of the Commonwealth has been influenced considerably by the ruling prices, which have undergone extraordinary fluctuations. The quantity and value of the production in earlier years and for 1912 to 1916 are shewn in the following tables :—

**PRODUCTION OF COPPER, AUSTRALIA, 1881 to 1916.**

State.	1881.	1891.	1901.	1908.	1912.	1913.	1914.	1915.	1916.

A short account of the discovery of copper in the different States is given in the earlier Year Books.

2. **Sources of Production.**—(i.) *New South Wales.* The principal seat of the copper-mining industry at the present date is in the Cobar district, the value of the deposits there being first recognised in 1869. The value of the output from this district in 1916 was £455,240, out of a total for the State of £586,127. At the Great Cobar Mine the Company's smelters resumed operations early in January, and this increased activity, coupled with the high prices ruling for copper in 1916, resulted in the largely increased return as compared with the years 1914 and 1915.

The Cadia Copper mine, at Cadia, in the Orange division, produced 563 tons, valued at £61,932. A yield of 51 tons of matte, valued at £6,281, was obtained from the Grafton Mine at Cangai, the Mount Hope Mine at Mount Hope obtained 110 tons, valued at £8300, and the Mouramba Copper Mines at Nymagee produced 903 tons of copper, valued at £108,807.

The Electrolytic Refining and Smelting Company of Australia Limited, established at Port Kembla, produced 2310 tons of copper, valued at £261,635, from ores won in the State. The English and Australian Copper Co. Ltd., at Waratah, obtained 530 tons, valued at £55,981, from local ores.

(ii.) *Queensland.* The yield in this State amounted in 1916 to 19,520 tons, valued at £2,265,422, to which the Cloncurry field contributed 9908 tons, valued at £1,149,328. Next in order were Mount Morgan with 7646 tons, valued at £886,936; Gladstone 922 tons, £107,010; Herberton, 566 tons, £65,656, and Mount Perry, 175 tons, £20,300.

The Cloncurry district—reckoned the richest and most extensive cupriferous area in Australia—produces more than half the copper output of the State, and its yield exceeds in value the total gold output.

(iii.) *South Australia.* Taking the entire period over which production extended, the yield of copper in South Australia easily outstrips that of any other State in the Commonwealth. In recent years, however, Queensland, Tasmania, and New South Wales have come to the front as copper producers, as the table on the preceding page will shew. Deposits of copper ore are found over a large portion of South Australia. A short account of the discovery, etc., of some of the principal mining areas, such as Kapunda, Burra Burra, Wallaroo, and Moonta, is given in preceding issues of the Official Year Book. During 1916 the production amounted to 7279 tons, valued at £822,527.

(iv.) *Western Australia.* The value of copper and ore exported from this State in 1916 was £64,833. According to the returns, the production in the West Pilbara field was 949 tons, valued at £16,116, while the Phillips River field shewed a production of 5428 tons, valued at £48,618. The Peak Hill district shewed a production of 251 tons, valued at £8268, and small quantities were produced on the Murchison and Ashburton fields.

(v.) *Tasmania.* The quantity of blister copper produced in Tasmania during 1916 was 6305 tons, valued at £884,689, and of copper and copper ore, 97 tons, valued at £1765, the bulk of the production being due to the Mount Lyell Mining and Railway Co. Ltd. This Company treated 299,414 tons of ore in 1916, and produced 6305 tons of blister copper, containing copper, 6237 tons; silver, 328,700 ozs.; and gold, 8803 ozs., the whole being valued at £940,994. The employees in 1916 numbered 1651, of whom 818 were miners, 671 were engaged in the reduction works, and 162 in the railway department.

(vi.) *Northern Territory.* Copper has been found at various places, including Copperfield, 5 miles south-east of Pine Creek, Mount Diamond and Burns Wolfram, 45 miles east of Pine Creek, at Coronet Hill, Daly River, Kilgour Creek, and Woolagarang.

3. **Prices of Copper.**—The great variation in price that the metal has undergone is shewn in the following table, which gives the average price in London and New York during 1901 and in each of the last five years. The figures are given on the authority of "The Mineral Industry." No quotations were recorded for the months August, September and October, in the London price for 1914, and the average for that year is based on the returns for the remaining nine months.

#### FLUCTUATION IN VALUE OF COPPER, 1901 and 1912 to 1916.

Year.	London Price per Ton Standard Copper.	New York. Price in Cents per lb.	
		* Lake Copper.	Electrolytic Copper.
	£	Cents.	Cents.
1901 ... ..	66.79	16.55	16.11
1912 ... ..	72.94	16.56	16.34
1913 ... ..	68.35	15.69	15.27
1914 ... ..	61.52	...	13.60
1915 ... ..	72.53	...	17.28
1916 ... ..	116.06	...	27.20

\* The term "Lake" copper is used to designate all copper sold in the trade as such, regardless of the process by which it is refined. During the last five months of 1913 sales by the Lake Superior Companies were scattered and irregular.

4. **World's Production of Copper.**—The world's production of copper in 1901 and during the five years 1912-16 is estimated to have been as follows:—

#### WORLD'S PRODUCTION OF COPPER, 1901 and 1912 to 1916.

Year	...	...	...	...	1901.	1912.	1913.	1914.	1915.	1916.
World's production— (short tons)	...	...	...	...	583,517	1,114,769	1,104,517	1,018,395	1,193,114	1,564,254

5. **Employment in Copper Mining.**—The number of persons employed in copper mining during 1901 and in each of the last five years was as follows:—

#### PERSONS ENGAGED IN COPPER MINING, 1901 and 1912 to 1916.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Nor. Ter.	C'wealth.
	No.	No.	No.	No.	No.	No.	No.	No.
1901	2,964	4	814	4,000	321	*	†	8,103†
1912	2,384	6	3,457	4,500	223	1,681	52	12,303
1913	2,629	12	3,687	4,000	213	2,162	53	12,756
1914	1,357	...	2,578	3,000	192	2,099	88	9,314
1915	914	...	2,149	2,000	144	1,758	97	7,062
1916	1,661	...	2,922	2,000	113	1,719	97	8,512

\* Included with silver miners. † No returns. ‡ Excluding Tasmania and Northern Territory.

## § 6. Tin.

1. **Production of Tin.**—The development of tin mining is, of course, largely dependent on the price realised for the metal, and, as in the case of copper, the production has been subjected to somewhat violent fluctuations. The table below shows the production in each of the Commonwealth States during the years 1881, 1891, 1901, and 1912 to 1916:—

## TIN PRODUCED IN AUSTRALIA, 1881 to 1916.

State.		1881.	1891.	1901.	1912	1913.	1914.	1915	1916.
QUANTITY.									
New South Wales	Ingot	Tons. 5,824	Tons. 1,454	Tons. 648	Tons. 900	Tons. 913	Tons. 650	Tons. 857	Tons. 909
	Ore	609	203	11	1,175	2,118	1,667	1,331	1,220
Victoria ...	Ore	†	†	77	48	57	53	95	122

Queensland ...	Ore	193,699	116,387	93,723	364,503	343,665	176,197	183,472	181,401
West Australia (Ore & Ingot)	...	...	10,200	40,000	79,738	72,142	35,649	41,391	49,101
Tasmania ...	Ore	375,775	293,170	212,542	543,103	531,983	259,300	292,306	350,852
Northern Territory	Ore	...	1,938	5,586	27,001	25,526	15,200	13,245	27,120
Commonwealth	...	1,145,603	560,750	432,576	1,358,162	1,401,571	758,431	806,641	927,926

\* Dressed tin ore, about 70% tin. † Not available.

2. **Sources of Production.**—(i.) *New South Wales.* A large proportion of the output in New South Wales was obtained by dredging, the quantity so won in 1916 being 1272 tons, valued at £146,880. In the Tingha division the yield amounted to 700 tons, valued at £79,261, the yield from dredging being estimated at £59,896. The Emmaville division in the New England district shewed a yield of 1088 tons, valued at £128,406, of which dredging produced 445 tons, valued at £50,260. In the Wilson's Downfall division, 137 tons, valued at £14,605, were raised. The Glen Innes division, also in the New England district, returned a yield of 170 tons, valued at £20,787. The Ardlethan field, in the Lachlan division, produced ore and concentrates to the value of £29,593.

(ii.) *Victoria.* In Victoria lode tin has been discovered at Mt. Wills, Beechworth, Eldorado, Chiltern, Stanley, and other places in the north-eastern district; and stream tin has been found in a large number of places, including those just mentioned in the north-eastern district. The bulk of the production in 1916 was obtained in the Eldorado district. About £2000 worth was obtained at Beechworth, £1300 worth at Toora, and a small quantity at Digger's Creek.

(iii.) *Queensland.* The chief producing districts in Queensland during 1916 were Herberton, 821 tons, valued at £85,364; Stanthorpe, 309 tons, £34,542; Cooktown, 234 tons, £26,812; Chillagoe, 186 tons, £17,580; and Kangaroo Hills, 130 tons, £14,190. The production of tin was to some extent adversely affected in 1916 by the lack of skilled miners, and also by the high prices offered for several of the other industrial metals.

(iv.) *Western Australia.* The production of tin ore and ingot for the State during 1916 amounted to 463 tons, valued at £49,101, to which the Greenbushes field contributed 282 tons, valued at £27,319, and the Pilbara field 153 tons, valued at £15,939. There was no production from the other fields in 1916.

(v.) *Tasmania.* The tin ore raised in 1916 amounted to 2855 tons, valued at £350,852, as compared with the year 1913, when the production was returned as 4010 tons, valued at £531,983. The heavy decline was of course due to the paralysis of the tin market occasioned by the war, coupled to some extent with unfavourable weather conditions. The bulk of the production in 1916 came from the North-Eastern Division with 1385 tons of ore, valued at £187,023. Of the total yield in this division, 719 tons were contributed by the Pioneer and Gladstone districts, 395 tons by Derby, and 185 tons by Branhholm. The next highest output was returned from the North-Western Division with 746 tons, to which the celebrated Mt. Bischoff contributed 476 tons, and the Mt Bischoff Extended, 207 tons. In the Eastern Division, the Avoca mines produced about 211 tons.

(vi.) *Northern Territory.* Mount Wells, in the Burrundie district, has yielded a fair output of tin since 1886, and recent developments have proved that the lodes are increasing in size and quality. Copper, silver-lead and tin shows occur abundantly in the district, but little work has been done on them. The recently discovered tin field at Maranboy, about 40 miles east of the Katherine telegraph station, was the largest producer in 1916. It is stated that rapid and systematic development of the ore bodies on this field is greatly retarded by lack of capital. A fairly extensive deposit has been located at Hayes Creek, about 12 miles from Brock's Creek and only 6 miles from the railway line. Efficient prospecting would probably reveal the existence of other deposits.

3. *World's Production of Tin.*—According to "The Mineral Industry" the world's production of tin during each of the last five years was as follows:—

WORLD'S TIN PRODUCTION, 1912 to 1916.

1912.	1913.	1914.	1915.	1916.
Tons. 122,538	Tons. 124,890	Tons. 111,206	Tons. 112,819	Tons 112,741

The yields from the chief producing countries in each of the last two years were as follows:—

	1915.	1916.
Malaya ... ..	46,800	43,900
Bolivia ... ..	21,800	21,100
Banka ... ..	13,800	14,600
Siam ... ..	7,800 (a)	7,800
Cornwall ... ..	5,000	4,500
Billiton ... ..	5,800	5,000 (a)
Nigeria ... ..	4,600	5,000
China ... ..	3,000 (b)	3,800 (a)
Australia ... ..	2,300	5,000 (a)
South Africa ... ..	2,100	2,000

(a) Estimate. (b) Shipments to Europe and U.S.A.

4. *Prices of Tin.*—The average price of the metal in the London market for the year 1897 and from 1906 to 1916 was as follows:—

## PRICE PER TON OF TIN, 1897 to 1916.

Year.	Price per Ton.	Year.	Price per Ton.
	£ s. d.		£ s. d.
1897 ... ..	61 8 0	1911 ... ..	192 7 0
1906 ... ..	180 12 11	1912 ... ..	209 8 5
1907 ... ..	172 12 9	1913 ... ..	206 5 7
1908 ... ..	133 2 6	1914 ... ..	156 12 7*
1909 ... ..	134 15 6	1915 ... ..	163 19 2
1910 ... ..	155 6 2	1916 ... ..	182 1 11

\* Quotations incomplete.

According to "The Mineral Industry" the maximum price obtained for tin during the period 1897-1916 was reached in April, 1914, when the metal was quoted at £231 per ton.

5. **Employment in Tin Mining.**—The number of persons employed in tin mining in 1901 and during the last five years is shewn below:—

## PERSONS ENGAGED IN TIN MINING, COMMONWEALTH, 1901 and 1912 to 1916.

Year.	N.S.W.	Victoria.	Qld.	W. Aust.	Tas.	Nor. Ter.	C'wealth.
	No.	No.	No.	No.	No.	No.	No.

1913 ... ..	2,362	116	2,102	403	1,947	267	7,197
1914 ... ..	2,168	65	1,570	217	1,523	186	5,729
1915 ... ..	1,648	27	1,218	188	1,221	154	4,456
1916 ... ..	1,938	135	1,093	235	1,217	154	4,772

## § 7. Zinc.

1. **Production of Zinc.**—The production of spelter is practically confined to the Broken Hill district of New South Wales, where zincblende forms one of the chief constituents in the enormous deposits of sulphide ores.

Gratifying results have been achieved in the work of the profitable extraction of the zinc contents of the large heaps of accumulated tailings and from the ore raised on the Broken Hill field. The year 1909 witnessed the passing of this problem out of the experimental stage, and the practical solution of the difficulty which had confronted the mining companies for many years. At present not only is the zinc being obtained in a marketable form, but the silver and lead contents are being turned to profitable account. In 1899 the exports of zinc (spelter and concentrates) amounted to 49,879 tons; in 1909 they totalled 373,906 tons, valued at £1,041,280; and in 1916, 209,741 tons, valued at £961,849, the great bulk of the production being obtained from tailings. The following table shews the production of zinc in New South Wales from 1889 to 1916:—

## NEW SOUTH WALES.—PRODUCTION OF ZINC, 1889 to 1916.

Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.	Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.
	Tons.	£		Tons.	£
1889	97	988	1913	506,661	1,547,987
1891	219	2,622	1914	359,310	1,020,711
1899	49,879	49,207	1915	190,916	1,111,569
1912	520,518	1,766,242	1916	209,741	961,849

The total quantity of zinc (spelter and concentrates) produced in New South Wales to the end of the year 1916 was 4,086,345 tons, valued at £12,182,029.

At the Silver Spur mine at Texas, in the Stanthorpe division in Queensland, part of the ore is high in zinc and lead, but low in silver. Profitable extraction of the zinc and lead depends, however, on railway connection with the mine. Zinc sulphide is produced by the Mount Garnet mine in the Herberton district, and during 1916 several hundred tons of good quality ore were raised.

During the year 1916, a small quantity of zinc, valued at £630, was produced in Western Australia.

**2. Prices of Zinc.**—During the four years 1911 to 1914, the price of zinc averaged £23 15s. per ton, ranging from £21 in 1914 to £26 3s. 4d. in 1912. Owing to the heavy demand and other circumstances arising out of the war, the prices in 1915 and 1916 reached the very high average of £68 19s. 7d. and £71 18s. 6d. per ton. respectively.

## § 8. Iron.

**1. General.**—The fact that iron-ore is widely distributed in the Commonwealth has long been known, and extensive deposits have been discovered from time to time at various places throughout the States. It will appear, however, from what is stated below, that until quite recently, little has been done in the way of converting these deposits into a marketable commodity.

(i.) *The Manufactures Encouragement Act 1908-12.* It was hoped that the passing by the Commonwealth Parliament of the Manufactures Encouragement Act, which came into force on the 1st January, 1909, would assist in firmly establishing the iron industry in Australia on a remunerative basis, both in the smelting of pig iron and in the production of bar iron and steel from Australian ore. The Act referred to, together with its amendment in 1912, provided for the payment of bounties on iron in accordance with the terms set out hereunder :—

### BOUNTIES PAYABLE ON AUSTRALIAN PIG IRON, BAR IRON, STEEL, Etc.

Description of Goods.	Rate of Bounty.	Total Amount which may be authorised.	Date of Expiry of Bounty.
CLASS 1.			
Pig iron made from Australian ore ... ..	12s. per ton	£150,000	30th June, 1914
Puddled bar iron made from Australian pig iron ... ..	"		
Steel made from Australian pig iron ... ..	"		
CLASS 2.			
Galvanised sheet or plate iron or steel (whether corrugated or not) made from Australian ore	10 per cent. on value	£30,000	30th June, 1914
Wire netting, not being prison made and being made from Australian ore or from wire manufactured in the United Kingdom	10 per cent. on value		
Wire made from Australian ore	10 per cent. on value		
Iron and steel tubes or pipes (except riveted or cast), not more than six inches internal diameter, made from Australian pig iron or steel	10 per cent. on value		

Particulars of the bounties paid under the above Act during the half-year ended the 30th June, 1909, and during the financial years 1909-10 to 1914-15, are shewn in the following statement :—

**PARTICULARS OF BOUNTIES PAID ON PIG IRON, BAR IRON, STEEL, Etc.,  
1909 to 1915.**

Period.	Steel made from Australian Pig Iron.	Puddled Bar Iron made from Aus- tralian Pig Iron.	Pig Iron made from Australian Ore.	Galvanised Sheet Iron made from Australian Ore.	Wire netting made from wire manu- factured in the United Kingdom.	Total.
	£	£	£	£	£	£
Half-year ended 30th June, 1909	575	568	2,314	192	...	3,649
1909-10 ... ..	1,491	1,254	23,510	287	6,036	32,578
1910-11 ... ..	1,940	2,080	20,462	121	4,824	29,427
1911-12 ... ..	723	671	15,611	74	5,968	23,047
1912-13 ... ..	...	38	16,949	...	1,110	18,097
1913-14 ... ..	7,136	...	40,121	...	4,554	51,811
1914-15 ... ..	2,474	...	31,813*	...	593	34,880
Total ... ..	14,339	4,611	150,780	674	23,085	193,489

\* Including £19,808 under Iron Bounty Act, see (ii.) infra.

(ii.) *The Iron Bounty Act 1914.* This Act repealed the Manufactures Encouragement Act 1908-14, and provided for a bounty on Australian pig iron up to the end of 1916. The rate of bounty was 8s. per ton, and the total amount authorised £30,000. Provision was made for transfer, if required, to the State, of lands, buildings, etc., used in the manufacture of pig iron. During the financial year 1916-17, bounty amounting to £11,454 was paid on 28,635 tons. So far New South Wales is the only State where bounty has been claimed.

**2. Production of Iron.—(i.) New South Wales.** Reference to the extent of the deposits of iron ore in the State, and the events leading up to the establishment of ironworks at Lithgow, will be found in earlier issues of the Year Book (see No. III., p. 508). During 1916 the following materials were received at the blast furnace at the Eskbank Iron Works, Lithgow:—Iron ore, 90,182 tons; limestone, 37,565 tons; and coke, 79,518 tons. The output was 52,556 tons of pig iron, and the quantity of steel ingots made 20,762 tons. The iron ore was raised from quarries at Tallawang and Coombing Park.

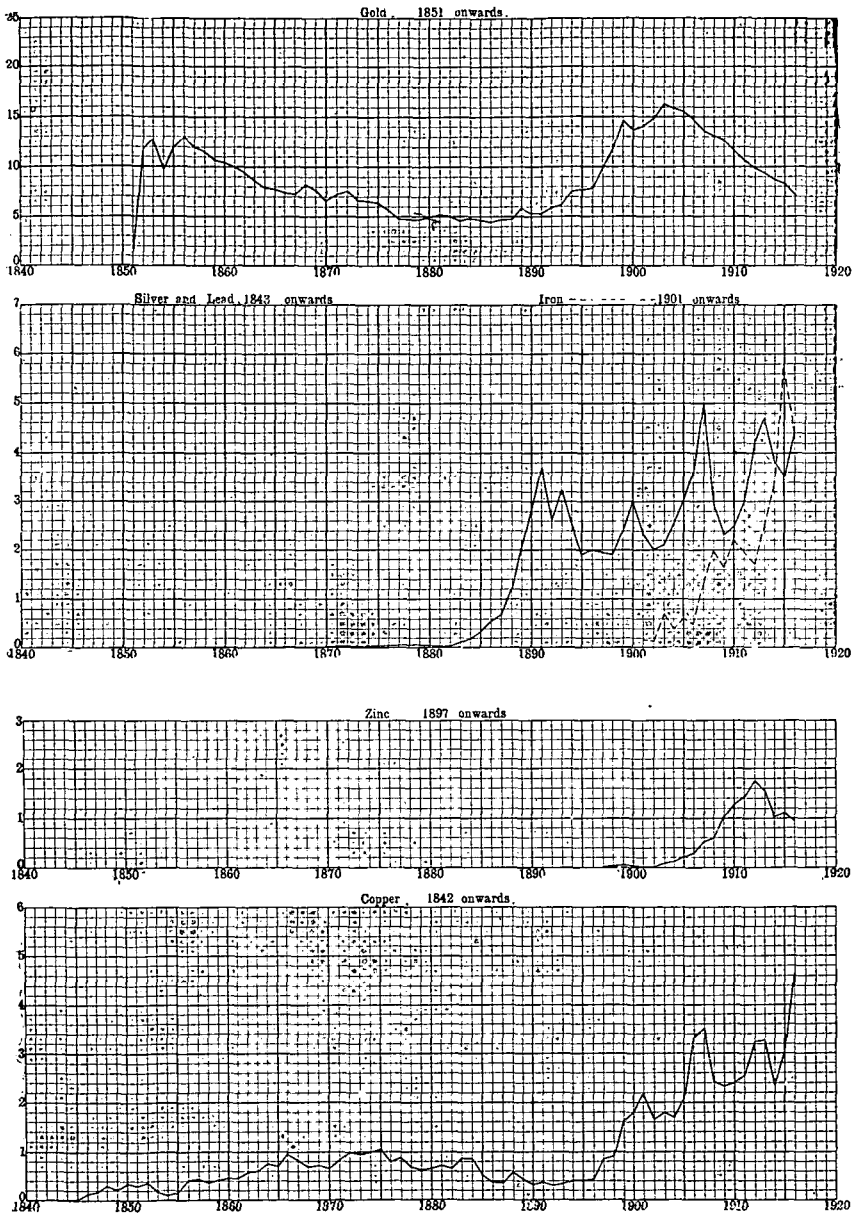

The Broken Hill Proprietary Company has established works for the manufacture of iron and steel on a large scale at Newcastle, and operations were started early in 1915. The Company is utilising the immense deposit of iron ore at the Iron Knob quarries in South Australia, abundant stores of first quality coal can be obtained from the various coalfields in the vicinity of Newcastle, and arrangements have been made for the local supply of the necessary quantities of limestone. The works have been planned so as to allow of ready extension as the business develops. During the year ended 30th November, 1917, the production of steel ingots amounted to about 130,000 tons. For the same period the blooming mill produced 134,000 tons, the rail mill 82,000 tons, the 18-inch mill 15,000 tons, and the 12-inch mill 988 tons.

The following table shews the quantity and value of finished iron, pig iron, etc., made in New South Wales during the last seven years from locally-raised ores.

**NEW SOUTH WALES.—PRODUCTION OF IRON (LOCAL ORE), 1910 to 1916.**

Particulars.	1910.	1911.	1912.	1913.	1914.	1915.	1916.
Quantity Tons	40,487	36,354	32,677	46,563	75,150	76,318	52,556
Value ... £	161,948	145,416	130,708	186,252	254,257	267,000	197,085

GRAPHS SHEWING VALUES OF THE PRINCIPAL MINERALS PRODUCED IN THE  
COMMONWEALTH, 1840 TO 1916.

(See pages—for gold, 433; silver, 442; iron, 451; zinc, 450; copper, 445.)

**EXPLANATION OF GRAPHS**—The values shewn in the above diagrams are those of the total Commonwealth production of certain of the most important minerals in successive years from 1842 to 1916.

The base of each small square represents an interval of one year, and the vertical height represents in the case of gold £1,000,000, in the case of silver and lead, zinc, and copper £200,000, and in the case of iron £20,000.

GRAPHS SHEWING VALUES OF THE PRINCIPAL MINERALS PRODUCED IN THE  
COMMONWEALTH, 1840 to 1916.

(See pages 459 for coal ; 448, tin ; and 432 total mineral production.)

EXPLANATION OF GRAPHS—The values shewn in the above diagrams are those of the total Commonwealth production of certain of the most important minerals in successive years from 1840 to 1916.

The base of each small square represents an interval of one year, and the vertical height represents in the case of coal and tin £200,000, and in the case of total mineral production £1,000,000.

The bounty paid in 1914, 1915, and 1916 on iron and steel made from ores mined in New South Wales was as follows:—

**BOUNTY PAID ON IRON AND STEEL, NEW SOUTH WALES, 1914, 1915, and 1916.**

Description.	1914.		1915.		1916.	
	Tonnage.	Bounty.	Tonnage.	Bounty.	Tonnage.	Bounty.
Pig iron ...	58,528	£ 35,117	75,000	£ 30,000	68,512	£ 27,405
Steel ...	14,929	8,957	...	...	...	...
Total ...	73,457	44,074	75,000	30,000	68,512	27,405

A quantity of iron oxide is purchased by the various gasworks for use in purifying gas, the output in New South Wales being drawn chiefly from the deposits at Port Macquarie, while smaller quantities are obtained from Mittagong. During 1916 the iron oxide raised amounted to 2461 tons, valued at £2695, while the total output to the end of that year was 25,000 tons, valued £46,000. Up to the end of 1912 a certain amount of ironstone was raised each year for fluxing purposes, but as the smelting companies obtained suitable ores for treatment there was no subsequent production till 1916, when 1472 tons, valued at £1083, were raised. The total raised for the period 1899-1916 amounted to 108,000 tons, valued at £83,000.

(ii.) *Victoria.* Iron ore has been located at various places in Victoria, particularly at Nowa Nowa, in the Gippsland district, and at Dookie. A blast furnace was erected in 1881 near Lal Lal, on the Moorabool River, and some very fair quality iron was produced, which was used for truck wheels and stamper shoes in the Ballarat mines. The fall in the price of the metal, however, led to the closing of the works. In his report for 1905 the Secretary for Mines states that without special assistance to the industry there does not seem to be any prospect of the deposits being profitably worked.

(iii.) *Queensland.* Queensland possesses some extensive deposits of iron ore, which is mined chiefly for fluxing purposes in connection with the reduction of gold and copper ores. During the year 1916, 44,161 tons of ironstone, valued at £37,781, were raised, of which 35,734 tons, valued at £35,036, came from the Rockhampton district, and about 8000 tons, valued at £2700, from the Cloncurry field.

(iv.) *South Australia.* South Australia possesses some rich deposits of iron ore capable of being mined for an indefinite period. The best known deposit is the Iron Knob, a veritable hill of iron of high percentage, situated about forty miles W.S.W. from Port Augusta. The estimated quantity of iron ore in sight at the Iron Knob and Iron Monarch has been set down at 21,000,000 tons. The Broken Hill Company utilises ore from this quarry at its ironworks at Newcastle, New South Wales, and the amount raised for the year ended November, 1917, was nearly 300,000 tons, of which about 224,000 tons were used at the works.

(v.) *Western Australia.* This State has some very rich deposits of iron ore, but owing to their geographical position, the most extensive fields at the present time are practically unexploited, the production in the State being confined chiefly to that needed for fluxing purposes. The Murchison field possesses some extensive deposits of high-grade ore. There are also deposits on Koolan Island at Yampi Sound.

(vi.) *Tasmania.* The existence of large quantities of iron ore in Tasmania was noted as far back as 1822, when Surveyor-General Evans alluded to the "surprising abundance of iron within a few miles of Launceston." A company known as the Tasmanian Charcoal Iron Company was formed to work these deposits, and commenced operations in June, 1876. Unfortunately, however, the presence of chromium rendered the pig iron so hard and brittle that the works had to be abandoned. Extensive deposits of specular iron ore are also found in the neighbourhood of the Blythe and Gawler Rivers. The total production of iron ore in 1908 was 3600 tons, valued at £1600, and was all raised by the Tasmanian iron mine at Penguin, but owing to the closing down of that mine in 1909, there has been no further production. Iron pyrites for the manufacture of sulphuric acid and of manures is produced on the West Coast, the quantity raised in 1916 being 14,005 tons, valued at £13,597.

(vii.) *Northern Territory.* Large bodies of rich ironstone have been discovered in various parts of the Territory, particularly between the Adelaide River and Rum Jungle. Owing to the lack of coal deposits, however, the deposits possess no immediate value.

(viii.) *World's Production of Iron, 1915.* The quantity of iron produced in Australia is but a very small proportion of the world's production, which in 1915 amounted to 64,516,000 metric tons (pig iron). The leading position for magnitude of production is held by the United States, which in 1915 produced 30,000,000 tons, compared with Germany's 11,790,000 tons, and the United Kingdom's 8,793,000 tons. The position of the three countries named is similar to what it has been for several years past. Unfortunately, complete returns for a later year than 1911 are not available in regard to steel, but the production for that year is given as 58,276,000 metric tons.

## § 9. Other Metals.

1. **Antimony.**—This metal is widely distributed in the north-eastern portion of New South Wales, between the 148th meridian and the coast, and has been found native at Lucknow, near Orange. Dyscrasite, a silver antimonide, has been found in massive blocks in the Broken Hill lodes. The export of antimony (metal and ore) in 1916 amounted to 616 tons, valued at £13,334. The ore was raised mainly in the Hillgrove division, where it is found in association with scheelite and gold. The total quantity of antimony ore raised in New South Wales up to the end of 1916 was 17,961 tons, valued at £331,948. The production of antimony ore in Victoria during 1916 amounted to 12,382 tons, valued at £77,275. The whole of this ore was raised by a company operating at Costerfield. In Queensland extensive deposits were discovered at Neerdie, in the Wide Bay district, during 1872, also at Wolfram Camp on the Hodgkinson field, on the Palmer River, in the Ravenswood district, and on the Mitchell River in the Herberton district. Ore has also been obtained in the Dividing Range near Herberton, and adjacent to some of the central tributaries of Emu Creek. Production in 1916 amounted to 192 tons, valued at £3965. In Western Australia lodes of stibnite carrying gold have been found in the Roeburne district. During 1916, 27 tons of antimony, valued at £580, were exported.

2. **Arsenic.**—In the form of arsenopyrite, arsenic is of wide distribution in Victoria, but the deposits are worked to a limited extent only. At Ballarat a small quantity of the oxide is obtained from the flues of roasting furnaces.

3. **Barium.**—A valuable lode of barium sulphate has been discovered near Dalwin, on the North Lyell railway, in Tasmania. It is stated that the lode is from 2½ to 7 feet wide over a length of over 40 chains.

4. **Bismuth.**—This metal has been found in New South Wales, near Glen Innes, in the Deepwater division, and also at Whipstick, in the Pambula division, its discovery dating from 1877. About 30 tons of metal and ore, valued at £5473, were exported from New South Wales during 1916; the total quantity exported to the end of that year was

618 tons, valued at £143,030. In Queensland wolfram and bismuth have been found in various districts, but the chief centres of production in 1916 were the Herberton and Chillagoe fields. The total production in 1916 was valued at £78,412, of which £57,813 was returned as wolfram, £1530 as bismuth, and £19,069 as bismuth and wolfram. In South Australia deposits are found at Balhannah, at Mount Macdonald, and at Murnin-nie, on the shores of Spencer's Gulf. In Tasmania  $3\frac{1}{2}$  tons, valued at £1059, were raised in 1916, principally from the Shepherd and Murphy mine at Middlesex.

5. **Chromium.**—In New South Wales chromium is found at Bowling Alley Point, on the Peel River, at Barraba, at Gordon Brook, in the Clarence River district, at Bingara, Wallendbeen, and near Gundagai. The production during recent years has been trifling, the quantity raised in 1916 being 450 tons, from an area at Wood's Reef, Barraba. The total exports to the end of 1916 amounted to 31,985 tons, valued at £102,617. Chrome iron ore is found in Queensland in the Rockhampton district, where the Elgalla mine, at Cawarral, produced a small quantity in 1911.

6. **Carnotite.**—A discovery of carnotite ore was made in 1906 twenty miles E.S.E. from the Olary railway station in South Australia. (See also "Radium.")

7. **Cobalt.**—This metal was found at Carcoar in New South Wales in 1889, and subsequently at Bungonia, Port Macquarie, and various other places. There was no export of cobalt in 1915, and the total produced since 1860 amounted in value to only a little over £8000. Deposits have been noted in South Australia near Bimbourie and South Blinman; in Western Australia at Norseman and Kanowna; and at various places in Victoria.

8. **Lead.**—This metal was first noted in New South Wales in 1849, when small specimens of native metal were found by the Rev. W. B. Clarke. At present lead mining *per se* is not practised to any extent in the Commonwealth, the supply of the metal being chiefly obtained in conjunction with silver. In New South Wales, lead in the form of pig, carbonate, and chloride, exported in 1916, amounted to 25,466 tons, valued at £799,632. The total lead exported to the end of 1916 was 243,506 tons, valued at £4,225,830. In Victoria oxides, sulphides, and carbonates of lead are found in the reefs of most of the goldfields. The deposits are not, however, of sufficient extent to repay the cost of working. In Queensland the deposits are worked chiefly for the silver, copper or gold contents of the ore, the lead produced in 1916 amounting to 615 tons, valued at £19,193, of which 314 tons were produced in the Burketown district, 189 tons at Etheridge, and 65 tons were recorded from the Herberton area. Pig lead to the value of £74,930 was exported from Western Australia in 1916. Complete information is not available as to the lead contents of Tasmanian silver-lead ores. At one time South Australia produced a fair amount of lead, £22,303 worth being raised in 1902, but the production rapidly decreased, and no output has been recorded since 1910.

9. **Mercury.**—In New South Wales mercury was first recorded by the Rev. W. B. Clarke in 1841. Cinnabar has been found in lodes and impregnations at various places, such as Bingara, Clarence River, etc. Up to the present the production of quick-silver has been small, the total being only about 3000 lbs. During 1916 the Pulganbar Company raised 200 tons of ore from their mine at Ewengar in the Drake division. The mercury produced was valued at £180. In Victoria native mercury and cinnabar have been found at Silver Creek, a tributary of the Jamieson River. Lodes of cinnabar have been found in Queensland at Kilkivan, and at Black Snake, in the Wide Bay district; about four tons were produced between 1874 and 1891. Between O.K. and Mungana several shows have been prospected with encouraging results. Small quantities have been found disseminated over a large area near Willunga in South Australia, and it is also found in New Guinea.

10. **Manganese.**—Ores of this metal occur in widely separated districts in New South Wales, but the low price of the metal precludes mining to any great extent, and the production to date has been trifling. During 1916, 1924 tons, valued at £1443, were

raised at Grenfell. In Queensland there are extensive deposits at Mount Miller, and at Gladstone, the production in 1916 being 643 tons, valued at £2793. Small quantities of manganese ore were raised in Victoria during 1916 from mines in the vicinity of Heathcote. Extensive deposits of the ore were mined at Boolconda in South Australia some years ago. Deposits have also been noted at Kangaroo Island, Quorn, Tumby, and various other parts of the State. The production in 1916 was valued at £2700. In Western Australia ores of the metal are found widely scattered, the black oxide being especially plentiful in the Kimberley district.

11. **Molybdenum.**—In New South Wales molybdenite (associated with bismuth) is obtained at Kingsgate, near Glen Innes, at Deepwater, at Rocky River in the Tenterfield division, in the Bathurst division, and at Whipstick in the Pambula division, the export in 1916 being 54 tons, valued at £22,066, as compared with 32 tons, valued at £16,937, in the previous year. The production at Kingsgate was valued at about £7400. In the Deepwater division £5000 worth was obtained. A small quantity was also obtained in the Tenterfield division. The Whipstick mines yielded 25 tons of molybdenite, valued at £9900. There was a small production from Yetholme in the Bathurst division. The production in Queensland for 1916 was 81 tons, valued at £34,369, practically the whole of which was contributed by the mines in the Chillagoe field. A small quantity was produced in 1914 from mines in the Moonta district in South Australia, and the occurrence of the metal is reported from various other localities. Molybdenite occurs in small quantities at various localities in Western Australia, and an attempt is being made to open up a deposit at Mulgine, on the South Yalgoo goldfield.

12. **Radium.**—(i.) It is reported that there have been several definite discoveries in Australia of the occurrence of minerals containing radium. The discovery at Olary, in South Australia, of carnotite, which is an alteration product of pitchblende, the compound from which radium is obtained, has already been referred to. In 1910 pitchblende was identified in portion of the workings at Olary, and a specimen, exhibiting a high degree of radio-activity was obtained. This is the first authentic discovery of the mineral pitchblende in Australia. The deposits of radio-active uranium ores found at Radium Hill were mined during the last few years, and the concentrates forwarded to Sydney for treatment at the company's works at Woolwich. As noted in (ii) below operations are at present at a standstill. Monazite from Pilbara, Western Australia, has been shewn to give off radium emanations. The mineral has been called "pilbarite." Lastly, it is stated that the ores obtained at the Moonta mines, South Australia, contain from one-tenth to one-fifteenth of the amount of radium found in high-grade pitchblende, and that a product having a fairly high degree of radio-activity can be extracted therefrom with comparative ease.

(ii.) *Production of Radium Bromide.* At the end of November, 1912, a small quantity of radium bromide was produced at the Radium Hill Co.'s works at Woolwich, Sydney, this being the first occasion on which a marketable amount of this salt has been obtained outside of Europe. It is estimated by the chemist in charge that the present plant at the works is capable of providing £600 worth of radium weekly. From the 30th June, 1913, to the end of May, 1914, the works produced 239 milligrams of high grade radium preparation. The industry, however, is at present inactive in consequence of the war.

13. **Tungsten.**—Wolfram and scheelite, the principal ores of tungsten, are both mined to a small extent in New South Wales. During 1916 the export of wolfram was 183 tons, valued at £31,163, and of scheelite 81 tons, valued at £13,719. Wolfram was mined chiefly at Torrington, in the Deepwater division, and scheelite at Hillgrove. In Victoria small quantities of ore were raised during 1916 at Bendoc. In Queensland, tungsten ores are found in several districts, the chief centres of production in 1916 being Chillagoe and Herberton. (See also Bismuth.) A deposit of wolfram was discovered near Yankalilla, in South Australia, as far back as 1893, but the production up to date has been small. It is believed that careful examination will lead to

increased production from the deposits at Callawonga Creek. In the Northern Territory wolfram to the value of £20,000 was obtained in 1916 chiefly from the Burns Wolfram mine, 40 miles east of Pine Creek, from Yenberrie in the same district, and from Hatches Creek about 800 miles south-east of Darwin. Numerous samples of good wolfram ore have been obtained at the Frew River in Central Australia.

In Western Australia a deposit of wolfram was discovered in the West Kimberley district about 70 miles to the north-east of Derby. The export in 1916 was, however, trifling. Wolfram is mined at various points in Tasmania, the production for 1916 being 106 tons, valued at £16,910, obtained chiefly at Avoca and from the Shepherd and Murphy mine at Middlesex. Scheelite has been discovered on King Island in Bass Strait.

14. **Tantalum.**—Tantalite in small quantities has been found in the Greenbushes mineral field of Western Australia for some time past, but recently a lode of fairly extensive proportions was located at the Wodgina tinfield. Up to the end of 1905 the production of this mineral in Western Australia amounted to 73 tons, valued at about £10,000, but early in 1906 it was found that the supply exceeded the demand and production was temporarily stopped; in 1908 a small quantity valued at £400 was exported. About £327 worth was reported as having been raised in the Greenbushes and Pilbara fields during 1909, but none was exported owing to the entire absence of any market. No further production was recorded until 1916, when 47 tons, valued at £9375, were exported, consisting of ore which had been raised some years previously at Wodgina, in the Pilbara field. Small quantities of the mineral are also found in the Northern Territory.

15. **Uranium.**—This mineral has been discovered in South Australia in the country between Mount Painter and Mount Pitts, about 80 miles east from Farina. The uranium ores occur most frequently in the form of torbernite and autunite, and are found over a considerable area. The discovery is therefore of considerable importance, since ores of this mineral are found to a very limited extent in other parts of the world, and radium is regarded as one of the products of disintegration of uranium.

In addition to the metals enumerated above there is a large number of others occurring in greater or less degree, while fresh discoveries are being constantly reported.

## (B). NON-METALLIC MINERALS.

### § 10. Coal.

1. **Production in each State.**—(i.) *Historical.* A historical account of the discovery of coal in each State will be found in preceding issues of the Year Book. (See No. III., pp. 515-6.)

(ii.) *New South Wales.* The production in 1916 amounted to 8,127,161 tons, valued at £3,336,419, or a decrease of about 1,322,000 tons in quantity, and £88,000 in value, as compared with the output in 1915. The decreased return in 1916 is accounted for largely by the lessened production from the Northern District Collieries consequent on the restriction of the export trade owing to the war.

(iii.) *Victoria.* During 1916, 420,098 tons of coal were raised, valued at £216,875. Of this total 354,146 tons, valued at £173,839, were raised by the State coal mine at Wonthaggi. The total production for 1916 was about 171,000 tons lower than in the preceding year.

(iv.) *Queensland.* The quantity of coal raised in 1916 was 907,727 tons, valued at £389,348, this production being smaller than in 1914 and 1915. Cessation of operations in consequence of an industrial dispute was chiefly responsible for the decreased output. Twenty-nine collieries were working in the Ipswich district, seven on the Darling Downs, four in the Maryborough district, one each in the Rockhampton and Chillagoe districts, and four at Blair Athol. The industry is at present in a very satisfactory position in the northern State, and owing to the wide area over which the deposits stretch, practically no limit can be set to its possibilities of extension.

(v.) *Western Australia.* Five collieries were in operation on the Collie field during 1916, and the output for the year was 301,526 tons, or about 15,000 tons more than in 1915.

(vi.) *Tasmania.* The principal collieries in Tasmania are the Cornwall and Mount Nicholas, the former producing 23,000 and the latter 31,000 tons out of a total yield in 1916 of 56,000 tons.

The quantity and value of coal produced in each State and in the Commonwealth at various periods since 1881, are shewn in the following table:—

### PRODUCTION OF COAL, AUSTRALIA, 1881 to 1916.

The Victorian figures for 1916 include about 2900 tons of brown coal, valued at £580, raised at Altona.

2. *Distribution and Quantity of Coal in each State.*—(i.) *New South Wales.* Estimates have from time to time been made as to the total quantity of coal available for working in the deposits in New South Wales, and while these naturally differ to some extent, they agree in placing the amount at well over a thousand million tons, without taking into consideration the deposits existing below a depth of 4000 feet. According to Mr. E. F. Pittman, the coal-bearing rocks of New South Wales may be classified as follows:—

### COAL-BEARING ROCKS OF NEW SOUTH WALES.

Geological Age.	Maximum Thickness of Coal-bearing Strata.	Locality.	Character of Coal.
I. Tertiary—Eocene to Pliocene ...	Approx. 100 ft.	Kiandra, Gulgong, and Chouta Bay	Brown coal or lignite.
II. Mesozoic—Triassic or Trias-Jura	2,500 ..	Clarence and Richmond Rivers	Coal suitable for local use only.
III. Palæozoic—Permo-Carboniferous	13,000 ..	Northern, Southern and Western Coalfields	Good coal, suitable for gas, household and steaming.
IV. Palæozoic—Carboniferous ...	10,000 ..	Stroud, Bullah Dellah.	Very inferior coal with bands; of no value.

In regard to the Tertiary deposits, it may be noted that no serious attempt has been made to use the coal as fuel in New South Wales. At Kiandra a deposit of lignite was found to possess a maximum thickness of 30 feet, but as a general rule the seams vary

from 3 to 4 feet in thickness. The Triassic or Trias-Jura deposits in the Clarence and Richmond districts contain numerous seams, but the coal is largely intersected by bands, while its large percentage of ash renders it unfit for use as fuel for industrial purposes. These beds extend under the great western plains, but the presence of artesian water precludes the possibility of their being worked. The Clarence basin extends into Queensland, and at Ipswich thick and valuable seams of coal are worked. It is in the Permo-Carboniferous division that the great productive coal seams of the State are found, the area which they cover being estimated at about 16,550 square miles. The deepest part of the basin is somewhere in the vicinity of Sydney, where the "Sydney Harbour Colliery" is working the top seam at a depth of 2884 feet. Towards the north, south and west the seams rise towards the surface, and outcrop in the neighbourhood of Newcastle, Bulli and Lithgow. The coal from the various districts embraced in this division differs considerably in quality—that from the Newcastle district being especially suitable for gas-making and household purposes, while the product of the Southern (Illawarra) and Western (Lithgow) is an excellent steaming coal. At the present time the Greta coal seams are being extensively worked between West Maitland and Cessnock, and this stretch of country, covering a distance of fifteen miles, is now the most important coal mining district in Australasia. The Permo-Carboniferous measures have in various places been disturbed by intrusions of volcanic rocks, which in some instances have completely cindered the seams in close proximity to the intrusive masses, while in other instances the coal has been turned into a natural coke, some of which has realised good prices as fuel.

The table hereunder gives the yields from the various divisions at intervals from 1881 to 1916:—

**COAL RAISED IN NEW SOUTH WALES, 1881 to 1916.**

District.	1881.		1901.		1911.		1916.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£	Tons.	£

Western ...	163,842	50,473	424,720	102,214	831,337	210,329	966,396	269,393
Total ...	1,769,597	603,248	5,968,426	2,178,929	8,691,604	3,167,165	8,127,161	3,336,419

*Sydney Harbour Colliery.* This colliery possesses considerable interest from the circumstance that its workings are amongst the deepest in the world. Extended reference to the history of its opening will be found in preceding Year Books. (See No. VI., page 504.)

(ii.) *Victoria.* The deposits of black coal in Victoria occur in the Jurassic system, the workable seams, of a thickness ranging from two feet three inches to six feet, being all in the Southern Gippsland district. Deposits of brown coal and lignite of immense extent occur in gravels, sands, and clays of the Cainozoic period throughout Gippsland, Mornington Peninsula, Werribee Plains, Gellibrand, and Barwon and Moorabool basins. In the Latrobe Valley the beds reach a thickness of over 800 feet. When dried, the material makes good fuel, but owing to its excessive combustibility and friability requires to be consumed in specially constructed grates. Attempts have been made to manufacture briquettes from the brown coal, but so far without any great measure of success. At the Melbourne and Altona Colliery Company's mine at Altona, 2915 tons of brown coal, valued at £583, were raised in 1916. In 1917 an Advisory Committee appointed to report on the brown coal deposits of Victoria recommended the establishment of an open-cut mine at Morwell in connection with a comprehensive scheme for electrical power generation and transmission, as well as for the supply of brown coal for other requirements.

The output of coal from the chief Victorian collieries during the last ten years was as follows:—

### PRODUCTION OF COAL IN VICTORIA, 1907 to 1916.

Year.	State Coal Mine.	Outtrim Howitt Company	Jumbunna Coal Company	Coal Creek.	Silkstone Co-operative Company	Austral Coal.	Other Companies.	Total Production.	Value.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	£
1907	...	64,088	61,755	3,762	7,565	...	1,470	138,635	79,706
1908	...	47,633	58,552	...	6,967	...	810	113,962	64,778

1910	201,053	46,832	61,954	10,968	...	36,052	13,050	369,909	189,254
1911	506,059	28,359	57,397	4,589	...	34,607	28,987	659,998	301,141
1912	455,659	24,326	53,806	4,829	...	31,506	23,529	593,155	259,321
1913	486,238	22,460	38,795	6,218	...	33,462	9,723	596,896	274,940
1914	550,107	16,597	24,236	5,887	...	20,034	3,390	620,251	289,099
1915	528,922	7,500	28,160	6,338	...	16,229	3,819	590,968	275,343
1916	354,146	...	31,792	5,688	...	10,885	17,587	420,098	216,875

Included in the total for "other companies" is an amount of 14,672 tons raised by the Powlett North and Woolamai, and 2915 tons of brown coal raised by the Melbourne and Altona Colliery Co. at Altona.

(iii.) *South Australia.* The coal from Leigh's Creek in South Australia is subject to similar disabilities to those of the Victorian brown coal, and until some means are devised of overcoming these, production will probably languish. Arrangements have been made for opening up a deposit of brown coal at Bowen, on the Morgan Railway Line, about 87 miles from Adelaide.

(iv.) *Queensland.* In Queensland the coal-bearing strata are of vast extent and wide distribution, being noted under the greater portion of the south-eastern districts, within 200 miles of the sea, as far north as Cooktown, and under portions of the far western interior. The Ipswich beds are estimated to occupy about 12,000 square miles of country, while the Burrum fields occupy a considerably larger area. At Callide, fifty miles west of Gladstone, a seam of coal free from bands has been struck in a shaft only sixty feet deep, and borings have proved the deposit to be of considerable magnitude. The beds in the Cook district are estimated to comprise rather more than 1000 square miles, but coal measures extend to the south-west far beyond Laura and to the north of the railway. Extensive beds occur in the basin of the Fitzroy River, in the Broadsound district, and at the Bowen River. Amongst other places where the mineral is found may be enumerated Clermont, the Palmer River, Tambo, Winton, Mount Mulligan, and the Flinders River. Boring operations have proved the existence of seams of workable coal for some distance on both sides of the Dawson River. A bituminous coal is yielded by the Ipswich seams, those of the Darling Downs yield a cannel, while anthracite of good quality is furnished by the Dawson River beds.

The quantity and value of coal raised in Queensland at various periods since 1861 were as shewn below:—

### PRODUCTION OF COAL IN QUEENSLAND, 1861 to 1916.

Year.	...	...	1861.	1871.	1881.	1891.	1901.	1916.

Mount Mulligan (Chillagoe) ...	597	17 2	9,541	12 7	15,281	13 4
Total... ..	1,053,990	7 11	1,024,273	8 0	907,727	8 7

It is estimated that more than one-third of the production from Ipswich was shipped as bunker coal, while the total amount shipped at the Brisbane railway wharves for bunkers, cargo, and other purposes was returned at 222,000 tons. The average value of Queensland coal in 1916 was the highest recorded for the last seventeen years.

(v.) *Western Australia.* The coal seams in Western Australia belong to the Carboniferous, Mesozoic, and Post-tertiary ages. Most of the coal contains a large proportion of moisture, and belongs partly to the hydrous bituminous and partly to the lignite class. The only coalfield at present worked is at Collie, in the Permo-Carboniferous beds. The coal produced is bright and clean, but very fragile when free from moisture. The increased output up to 1914 is partly due to the establishment of a bunkering trade at Bunbury and Fremantle, and partly to the employment of improved machinery. Difficulties with an inflow of water on the Scottish Collieries and a falling-off in the bunkering trade were responsible for the diminished returns in 1915. The production from this field since 1901 was as follows:—

**PRODUCTION OF COAL IN WESTERN AUSTRALIA, 1901 to 1916.**

Year ... ..	1901.	1910.	1911.	1912.	1913.	1914.	1915.	1916.
Quantity Tons	117,836	262,166	249,890	295,079	313,818	319,210	286,666	301,526
Value £	68,561	113,699	111,154	135,857	153,614	148,684	137,859	147,823

(vi.) *Tasmania.* In Tasmania coal occurs in the following geological periods:—  
 (1) Permo-Carboniferous: Lower Coal Measures. (2) Mesozoic: Upper Coal Measures.  
 (3) Tertiary: Brown Coal and Lignite deposits. Permo-Carboniferous coal is found at Avoca, Mt. Nicholas and Fingal, Thomson's Marshes, Langloh, Seymour, York Plains, Mike Howe's Marsh, Longford, Colebrook, Schouten Island, Spring Bay and Prosser's Plains, Compton and Old Beach, Lawrenny, Longhole, Sandfly, Ida Bay, Hastings and Southport, Recherché and South Coast, Tasman's Peninsula. Deposits of lignite and brown coal are plentiful in beds of Tertiary age, but they have not been exploited to any extent. An estimate gives the approximate quantity of coal available as sixty-five million tons, of which eleven millions are in the Lower Coal Measures and fifty-four millions in the Upper Measures, exclusive of an unknown quantity in strata fringing the Central Tiers.

### PRODUCTION OF COAL IN TASMANIA, 1901 to 1916.

District.	1901.	1910.	1911.	1912.	1913.	1914.	1915.	1916.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
North-western ...	2,952	1,720	1,496	956	1,167	1,074	270	673

Midland ...	1,536	721	635	679	847	847	691	598
South-eastern ...	...	8,899	640	720	270	130	68	20
South-western ...	3,711							
Total ...	45,438	82,455	57,067	53,560	55,043	60,794	64,536	55,575

The bulk of the output in 1916 was raised from the Cornwall and Mt. Nicholas mines, in the North-eastern Division, which produced 22,839 and 30,624 tons respectively.

3. **Production of Coal in Various Countries.**—The total known coal production of the world in 1912 amounted to about 1100 million tons (exclusive of brown coal or lignite), towards which the Commonwealth contributed 11 million tons, or about 1 per cent. The following table shews the production of the British Empire and the chief foreign countries in units of 1000 tons in 1901 and during each of the years from 1911 to 1915 where the returns are available:—

### COAL PRODUCTION, BRITISH EMPIRE, 1901 and 1911 to 1915.

Year.	United Kingdom.	British India.	Canada.	Australian C'wealth.	New Zealand.	Union of S. Africa.
	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.
1901 ...	219,047	6,636	5,791	6,881	1,228	712

1915 ...	253,206	17,104	11,800	11,415	2,209	7,394

### COAL PRODUCTION, FOREIGN COUNTRIES, 1901 and 1911 to 1915.

Year.	Russian Empire.	Sweden.	German Empire.	Belgium.	France.	Spain.	Japan.	United States.
	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.	1000 tons.
1901 ...	16,215	268	106,795	21,856	31,136	2,609	8,885	240,789
1911 ...	28,414	355	172,065	22,603	38,602	3,853	17,632	447,854
1912 ...	30,640	360	174,575	22,972	40,648	3,686	19,640	443,188
1913 ...	32,206	364	150,109	22,858	40,192	4,283	21,316	477,202
1914 ...	33,113	367	161,535	...	29,311	3,600	19,372	508,893
1915 ...	...	412	...	...	19,590	3,722	...	458,506

The United States returns include a large proportion of anthracite, the quantity averaging for the last five years about 79 million tons.

Including New Zealand the production from Australasia takes second place amongst the possessions of the British Empire, British India coming first in order.

4. **Export of Coal.**—The exports of coal from the Commonwealth are practically confined to New South Wales.

The total quantity of coal of Australian production (exclusive of bunker coal) exported from the Commonwealth to other countries in 1916 was 646,552 tons, valued at £415,560, of which amount 646,547 tons, valued at £415,549, were exported from New South Wales. Owing to the war the figures are, of course, considerably below those of normal years.

In the following table will be found the quantity and value of the exports from New South Wales, at decennial intervals since 1881 and during the last five years. The figures are given on the authority of the Mines Department of that State, and include both bunker coal and coal exported from New South Wales to other States of the Commonwealth :—

**EXPORTS OF NEW SOUTH WALES COAL, 1881 to 1916.**

Year.	1881.	1891.	1901.	1911.	1912.	1913.	1914.	1915.	1916.
Quantity, 1000 tons ...	1,030	2,514	3,471	5,024	6,053	6,232	5,868	4,668	3,434
Value ... £1000	417	1,307	1,682	2,664	3,233	3,342	3,159	2,485	1,873

The principal oversea countries to which coal was exported from New South Wales during the year 1916-17 are as shewn hereunder. The quantity and value refer strictly to exports, and exclude bunker coal :—

**DESTINATION OF NEW SOUTH WALES OVERSEA EXPORTS OF COAL, 1916-17.**

Country.	Quantity.	Value.	Country.	Quantity.	Value.
	Tons.	£		Tons.	£
Chile ...	81,421	50,068	Java ...	29,394	16,355

United States ...	3,202	2,390	Pleasant Islands	2,239	1,291
India ...	36,653	22,421			

The quantity of bunker coal taken from New South Wales by oversea vessels was about 662,000 tons, valued at £457,000.

The distribution of the total output from New South Wales collieries during the last five years was as follows ; the particulars given of quantity exported include coal shipped as bunker coal :—

**DISTRIBUTION OF TOTAL OUTPUT OF NEW SOUTH WALES COAL, 1911 to 1916.**

Year.	Exports to Australasian Ports.	Exports to other Ports.	Local Consumption.	Total.
	Tons.	Tons.	Tons.	Tons.
1911 ...	2,525,776	2,498,304	3,667,524	8,691,604
1913 ...	3,465,787	2,765,937	4,182,441	10,414,165
1914 ...	2,581,810	3,286,223	4,522,589	10,390,622
1915 ...	2,601,070	2,067,324	4,780,614	9,449,008
1916 ...	2,203,659	1,230,439	4,693,063	8,127,161

The figures quoted above are given on the authority of the New South Wales Mines Department. Owing to the abolition of the record of interstate trade it is impossible to give the quantities forwarded to each of the States of the Commonwealth.

**5. Consumption of Coal in Australia.**—An estimate of the consumption of coal in the Commonwealth may be arrived at by adding the imports to the home production, and deducting the exports (including bunker coal taken by oversea vessels). The following table shews the consumption of coal in Australia, computed in the manner specified, for the last five years :—

## CONSUMPTION OF COAL IN AUSTRALIA, 1912 to 1916.

Year.	Quantity of Coal Consumed.			
	Home Produce.	Produce of the United Kingdom.	Produce of Other Countries.	Total.
	Tons.	Tons.	Tons.	Tons.
1912 ... ..	7,907,000	1,500	14,000	7,922,500
1913 ... ..	8,671,491	872	3,577	8,675,940
1914 ... ..	8,944,867	23,066		8,967,933
1915 ... ..	9,250,592	6,580		9,257,172
1916 ... ..	8,266,215	11,068		8,277,283

The bunker coal taken away in 1916 is estimated at 950,000 tons.

6. **Price of Coal.**—(i.) *New South Wales.* The price of coal in New South Wales has been subject to considerable fluctuation since the date of first production. Up to the end of 1857 the average value of the total output was 11s. 10d. per ton. Next year the value had risen to nearly 15s., declining thereafter until in 1871 the price realised was 7s. From 1872 to 1879 there was a rise in value to 12s. Between 1882 and 1891 the price ranged between 8s. and 10s. From 1891 onwards there was a steady decline until 1898, when the average was 5s. 4d. Henceforward prices rose again until 1902, when 7s. 5d. was the average. A decline then set in until 1905, when the price stood at a little over 6s., followed by a rise of one penny in 1906, and a further rise of eightpence in 1907. In 1908 the average was 7s. 4d., and in 1916, 8s. 3d. per ton. The price of New South Wales coal depends on the district from which it is obtained, the northern (Newcastle) coal always realising a much higher rate than the southern or western product. The average rate in each district during the last five years was as follows:—

## PRICE OF COAL, NEW SOUTH WALES (PER TON), 1912 to 1916.

Year.	Northern District.	Southern District.	Western District.
	s. d.	s. d.	s. d.
1912 ... ..	8 1.15	6 1.06	4 11.98
1913 ... ..	7 9.91	6 1.13	5 1.85
1914 ... ..	7 8.26	6 4.12	5 6.83
1915 ... ..	7 7.24	6 11.23	5 6.08
1916 ... ..	9 0.72	7 1.77	5 6.90

(ii.) *Victoria.* In Victoria the average price of coal up to the 31st December, 1890, was 19s. 3d. per ton. In 1895 the price was still as high as 12s. 2d., but in the following five years there was a serious decline, the value in 1900 being quoted at 9s. 7d. per ton. In 1901, however, there was an astonishing rise, the figure being as high as 14s. 7d. Since that year, however, the price again declined, the average for 1905 being 10s. 2d.; for 1909, 12s.; for 1912, 8s. 9d.; for 1913, 9s. 3d., for 1914 and 1915, 9s. 4d., and for 1916, 10s. 4d. These averages are exclusive of brown coal, the production of which in 1916 was valued at 4s. per ton.

(iii.) *Queensland.* Prices in the principal coal-producing districts during the last five years were as follows:—

## PRICE OF COAL, QUEENSLAND, 1912 to 1916.

District.	Value at Pit's Mouth.				
	1912	1913.	1914.	1915.	1916.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
Ipswich ... ..	6 7	7 0½	7 1	7 3	7 11
Darling Downs ... ..	8 6½	8 6	8 9	8 11	9 10
Nundah (Brisbane) ... ..	...	...	5 3	...	...
Wide Bay and Maryborough ... ..	10 10½	10 11	11 4	11 10	12 2
Rockhampton ... ..	10 6	10 4	8 9	8 6	9 6
Clermont ... ..	7 6	7 7	8 5	7 8	7 9
Mount Mulligan (Chillagoe) ... ..	...	...	17 2	12 7	13 4

(iv.) *Western Australia.* The average price of the Collie (Western Australia) coal up to the end of 1901 was 9s. 4d. per ton, the price in 1901 being 11s. 7d. In 1902 the average stood at 12s. 3d., and from that time the price fell steadily until 1906, when it was 7s. 7½d. per ton. In 1907, the average price was 7s. 8½d.; in 1908, 8s. 7½d.; in 1909, 8s. 5½d.; in 1910, 8s. 8d.; in 1911, 8s. 10d.; in 1912, 9s. 2d.; in 1913, 9s. 9d.; in 1914, 9s. 4d.; in 1915, 9s. 8d., and in 1916, 9s. 9d. per ton.

(v.) *Tasmania.* The average price per ton of coal at the pit's mouth in Tasmania was 8s. in 1901. In 1902 it was 8s. 7d.; in 1903, 8s. 9d.; in 1904 and 1905, 9s. 8d.; in 1906, 9s. 9d.; in 1907, 1908, and 1909, 8s.; in 1910, 11s. 9d.; in 1911 and 1912, 9s. 2d.; in 1913, 9s. 3d.; in 1914, 9s. 2d.; in 1915, 9s. 5d., and in 1916, 9s. 9d. per ton.

7. *Price of Coal in other Countries.*—According to a report published by the Board of Trade the average value of coal at the pit's mouth in the five principal coal-producing countries of the world, excluding Russia, for which no information is available, for the five years ended 1912, was as follows:—

## PRICE OF FOREIGN COAL, 1908 to 1912.

Year.	United Kingdom.	Germany.	France.	Belgium.	United States.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
1908 ... ..	8 11	10 3½	12 11½	13 1½	5 11½
1909 ... ..	8 0½	10 2½	12 5½	11 8½	5 7½
1910 ... ..	8 2½	9 11½	12 3½	11 10½	5 10½
1911 ... ..	8 1½	9 9½	12 5½	12 0	5 10½
1912 ... ..	9 0½	10 6½	12 8½	13 5½	6 1

The price of coal at the pit's mouth in the principal British possessions is averaged by the same authority as follows:—

## PRICE OF COAL, BRITISH POSSESSIONS, 1908 to 1912.

Year.	British India.	C'wealth of Australia.	New Zealand.	Canada.	Union of Sth. Africa.
	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.	Per ton. s. d.
1908 ... ..	5 3	7 4½	10 4½	10 8	6 9½
1909 ... ..	4 8½	7 6½	10 10½	10 10½	6 3½
1910 ... ..	4 1	7 6½	11 1½	11 0½	5 10½
1911 ... ..	3 11½	7 5½	10 10½	10 9½	5 8½
1912 ... ..	4 6	7 6½	10 11½	11 5½	5 6½

**8. Employment and Accidents in Coal Mining.**—The number of persons employed in coal mining in each of the States during the year 1916 is shewn below. The table also shows the number of persons killed and injured, with the proportion per 1000 employed, while further columns are added shewing the quantity of coal raised for each person killed and injured, this being a factor which must be reckoned with in any consideration of the degree of risk attending mining operations.

Returns published by the Board of Trade, England, some years ago, gave the total known number of persons engaged in coal mining in the principal countries of the world as 3½ millions, the number in the United Kingdom being 1,068,000; the United States, 723,000; Germany, 628,000; France, 199,000; Russia, 169,000; Belgium, 146,000; Austria, 75,000; India, 133,000; and Japan, 145,000.

The latest available returns shew the rate in the United Kingdom in respect of deaths through accidents in coal mines as 1.17, and for the British Empire 1.48 per 1000 persons employed in coal mines. For France the rate is given as 1.17, for Germany 2.30, and the United States 3.35. For foreign countries generally the rate is stated at 2.48 per 1000.

#### EMPLOYMENT AND ACCIDENTS IN COAL MINING, 1916.

State.	Persons Employed in Coal Mining.	No. of Persons.		Proportion per 1000 Employed.		Tons of Coal Raised for Each Person.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
New South Wales ...	16,892	13	55	0.77	3.26	625,000	148,000
Victoria ...	1,281	...	18	...	14.00	...	23,300
Queensland ...	2,037	2	30	0.98	14.72	454,000	30,300
Western Australia ...	458	...	86	...	188.00	...	3,500
Tasmania ...	167	...	4	...	24.00	...	13,900
Commonwealth	20,835	15	193	0.72	9.26	654,000	50,800

### § 11. Coke.

**1. Production of Coke.**—Notwithstanding the large deposits of excellent coal in Australia, there was, prior to the war, a fairly considerable amount of coke imported from abroad. In 1916-17, the import amounted to only 307 tons, valued at £938, of which 306 tons, valued at £929, came from the United Kingdom. The table hereunder gives the production in New South Wales during the last five years:—

#### COKE MADE IN NEW SOUTH WALES, 1912 to 1916.

Year.		1912.	1913.	1914.	1915.	1916.
Quantity ...	Tons	241,159	298,612	304,800	417,753	437,587
Value, total ...	£	162,454	208,989	213,069	313,241	387,571
Value per ton ...	...	13s. 5d.	14s. 0d.	13s. 11d.	15s. 0d.	17s. 9d.

During the last five years the industry has made considerable progress. It provides a profitable means of disposal for the small coal which until recent years was allowed to go to waste.

A small quantity of coke is made in Queensland, the quantity returned in 1916 being 17,904 tons, but the bulk of that used in ore reduction is imported, mainly from New South Wales. The following table shews the amount manufactured locally during the last five years:—

**QUEENSLAND.—COKE MANUFACTURED, 1912 to 1916.**

Year.	1912.	1913.	1914.	1915.	1916.
Manufactured locally ... .. tons	38,136	14,942	16,685	17,085	17,904

It is estimated that the total amount of coke consumed for smelting purposes in Queensland during 1916 was 68,500 tons, of which 17,904 tons were produced locally, and 50,544 tons were imported from New South Wales. Oversea imports and exports of coke amounted to a few tons only.

## § 12. Oil Shale and Mineral Oils.

1. **Production of Shale.**—(i.) *New South Wales.* As pointed out by Mr. E. F. Pittman, the name kerosene shale has been rather inaptly applied to a variety of torbanite, cannel, or boghead mineral found at various geological horizons in New South Wales. The mineral does not, as a rule, split in parallel layers, the fracture being rather of a conchoidal type. Pure samples have been found to contain over 89 per cent. of volatile hydro-carbons. The discovery of the mineral in New South Wales dates probably as early as 1802. Its occurrence in the Hartley Vale district was noted by Count Strzelecki in 1845. The mineral has been found at several places in the Upper Coal Measures, and in at least two in the Lower Carboniferous. Production on anything like a large scale commenced in 1868, when about 17,000 tons, valued at £48,000, were raised. The production in 1916 amounted to 17,425 tons, valued at £17,772, as compared with 15,474 tons, valued at £12,890, in 1915. For 1916 the greater portion of the output was won at Wollan and Torbane.

(ii.) *Victoria.* Up to the present no extensive deposit of oil shale has been located in Victoria.

(iii.) *Queensland.* The discovery of natural gas and traces of oil in a deep bore at Roma has fostered the hope that energetic prospecting will lead to the discovery of mineral oil in quantity in this locality. At the end of 1916 the bore had reached a depth of 1450 feet, and the 15½-inch and 12½-inch casings had been successfully cemented in. Boring was continued to a depth of 2875 feet in 1917. Oil-bearing shales are common in many parts of the State. The deposit at Duaringa on the Central railway line shewed a thickness of 6 feet, and contained about 30 gallons of oil to the ton. Inflammable gas and a little oil have been noted in bores put down for coal on the Dawson River. There are shale deposits at Munduran Creek, near Gladstone, Casuarina Island, Redbank Plains in the Ipswich District and Murphy's Creek, near Toowoomba. It is stated that the borings have not so far penetrated to a sufficient depth to properly test the strata.

(iv.) *South Australia.* In this State large areas of bituminous shale, of which the boundaries are only approximately known, occur at Leigh's Creek and Lake Phillipson. Reference to the mineral known as coorongite is made in sub-section 13. Specimens of bitumen have been discovered on Kangaroo Island, and it was supposed that they were the product of a petroleum-bearing area. The Government Geologist states, however, that the island strata are not of such nature as to support this supposition. In regard to the mainland area it is argued by some investigators that the bores so far put down have not been carried to sufficient depth to fairly test the strata. A bonus of £5000 for the discovery of oil has been offered by the South Australian Government. An oil expert engaged by the Government reported adversely on the prospects, but his conclusions have

been challenged by other investigators. A large number of licenses to search for oil have been taken out, and boring operations are being carried on near Kingston and near Robe, the bore at the latter having reached a depth of nearly 4,000 feet.

(v.) *Western Australia.* A deposit of carbonaceous shale of considerable thickness is known to exist at Coolgardie, but the mineral has not yet been raised in any quantity. It is stated that small seepages of oil have been noted near Wonnerup, and indications are reported from the neighbourhood of Albany and Esperance.

(vi.) *Tasmania.* Tasmanite shale has been discovered in the basins of the Mersey, Don, and Minnow Rivers, and the Government Geologist estimates the probable capacity of the beds at 12,000,000 tons. The crude oil content of average quality shale has been estimated at 40 gallons to the ton. In July, 1912, the Railton-Latrobe Shale Oil Company acquired the leases and plant of the Tasmanian Shale and Oil Company, at Latrobe, and it was proposed to develop the deposits on a large scale. The production in 1914 was, however, small, amounting to 75 tons, valued at £75, while no returns from this source were included in the production records for 1915. In 1916, the Company raised 1286 tons of shale, valued at £1286. Large pieces of asphaltum have been discovered in places along the sea coast and in several of the bays of Port Davey Harbour, but it is believed that the material originates in submarine beds. A bore was put down in 1916 by a private company on Bruni Island in search of petroleum, but after sinking about 429 feet, operations ceased for lack of funds.

(vii.) *Northern Territory.* The existence of oil shale has been reported for many years in the Boroloola district, while several oil licenses have been applied for in the Victoria River district. Results so far, however, have been negative, and experts have pronounced unfavourably on the prospects.

(viii.) *Papua.* An expert has reported that the deposits of oil-bearing shale can be worked at a profit, and oil of a satisfactory quality has been obtained from two comparatively shallow bores. It is proposed to test the deeper deposits where indications warrant expectation of a copious supply.

2. **Export of Shale.**—In 1916 New South Wales exported 19 tons of shale, valued at £84.

3. **Shale Oils Bounties.**—The Shale Oils Bounties Act 1910 provided for the payment of bounties on certain goods manufactured in Australia from Australian shale on or after the 1st July, 1910, and before the 1st July, 1913. The total amount made available for bounties under this Act was £50,000.

During the year 1913, the bounties paid in New South Wales amounted to £985 on 118,000 gallons of kerosene, and £809 on 324 tons of refined paraffin wax. As the bounty expired on the 30th June, 1913, the articles mentioned were produced prior to that date.

### § 13. Other Non-Metallic Minerals.

1. **Alunite.**—Probably the most remarkable deposit of alunite in the world occurs at Bullahdelah, in the county of Gloucester, New South Wales, a large proportion of a low bluff ridge in the district being composed of this mineral. The deposits are worked by quarrying, and from 1890 up to the end of 1916, 46,000 tons had been exported, valued at £148,303, the exports for the year 1916 being 325 tons, valued at £1980.

Deposits of a high-class alunite are reported to have been discovered near Sunbury, in Victoria.

In South Australia an extensive deposit of the mineral was located in 1913 at Carrickalinga Head, on the coast north of Normanville, and within a short distance of Adelaide. It is stated that the specimens so far analysed have proved richer in valuable constituents than any similar find yet recorded. The production in 1916 was valued at £670. Another deposit has been located near Warnertown.

2. **Asbestos.**—This substance has been found in various parts of Australia, but up to the present has not been produced in any considerable quantity. In New South Wales the deposits at Jones' Creek, in the Gundagai division, were opened up during the year 1909 and a trial parcel of 15 tons shipped to Germany. Developmental operations were carried on during 1916 by a company at Wood's Reef, in the Barraba division, but there was no record of production. Deposits are found at various places in Queensland, but so far the product is somewhat inferior, the want of tensile strength being the chief drawback. In Western Australia what may prove to be a valuable deposit of the fibrous chrysotile variety has been located at Soanesville, on the Pilbara goldfield, and in 1909 £154 worth of this mineral was raised. In 1899 Tasmania raised 200 tons, valued at £363, but there was no further production until 1916, when a small quantity was raised at Anderson's Creek, near Beaconsfield. Deposits of asbestos of the mountain leather and mountain cork varieties have been discovered at Oodlawirra, while deposits of a good blue variety have been discovered near Hawker and about 23 miles from Eudunda, in South Australia.

3. **Barytes.**—In New South Wales during 1916 about 185 tons of barytes, valued at £278, were obtained in the Mudgee division, and 500 tons, valued at £1250 were raised in the Canowindra district.

4. **Clays and Pigments.**—Valuable deposits of clays and pigments of various sorts are found throughout the Commonwealth. There is a considerable local production of earthenware, bricks, and tiles, but the finer clays have not as yet been extensively used. In New South Wales the production of kaolin in 1916 amounted to 1744 tons, valued at £1336, raised in the Murrumburrah, Molong, Gulgong, and Goulburn divisions, and at Wallendbeen, Boxer's Creek and Home Rule. Fireclay to the amount of 26 tons was raised in the Molong division. Deposits of steatite were worked during 1916 in the Murrumburrah division, the quantity raised during the year amounting to 237 tons. Near Morangaroo 6500 tons of silica were raised by the Silica Fire Brick Company. About 40 tons of ochre, valued at £60, were raised in the Dubbo division. In Victoria 200 tons of kaolin were obtained at Pyalong, and 610 tons at Egerton, the value being given as £1200. In Queensland 8708 tons of fireclay, valued at £1771, were mined during the year 1916 in the Mount Morgan district. On Kangaroo Island, South Australia, where, it is stated, the first pottery mill in the Commonwealth was erected, there are vast deposits of felspar, china, stone, silica, and firebrick clay. There are also very extensive deposits of fireclay near Ardrossan on the Yorke Peninsula. Ochre deposits suitable for making coloured tiles are found near Port Noarlunga. Porcelain and other clays of good quality have been found in Tasmania at Beaconsfield, Sorell, Hagley, etc. Deposits of ochre have been opened up at Dubbo, Wellington, and Marulan, in New South Wales, and ochres and pigments of excellent quality have been produced therefrom. Extensive deposits of iron oxide, giving a return of 80 per cent. ochre, have been discovered near Oodlawirra in South Australia. Oil and water paints of good quality have been made from coloured ochres from Sorell, in Tasmania, and a deposit of ochre of good quality has been located near Mowbray.

5. **Coorongite.**—This peculiar india-rubber like material was first noted many years ago near Salt Creek and in the vicinity of Coorong Inlet, in South Australia, as well as at various localities on Kangaroo Island. It was thought that the substance owed its origin to subterranean oil-bearing strata, but so far the search for petroleum has not been attended with success. (See also § 12., iv.). While the origin of coorongite is still in doubt, it is held by some observers that it is not a petroleum product.

6. **Fuller's Earth.**—Small quantities of this material were produced in 1912, from leases near Narrabri, in New South Wales, the total sold amounting to 50 tons, valued at £287. During 1916 about 110 tons were produced in the Narrabri division.

7. **Graphite.**—Graphite is found in New South Wales near Undercliff Station, in the county of Buller, but the deposit is not sufficiently pure to prove remunerative. A small quantity was raised during 1916 from a site on the Bookookarara in the Wilson's Downfall division. In Victoria the mineral occurs in Ordovician slates in several of the goldfields, but is not worked. In Queensland graphite was raised some years ago by the

Graphite Plumbago Company at Mt. Bopple, near Netherby, on the Maryborough-Gympie line. A deposit has been located in the hundred of Roberts, about 9 miles N.W. of Arno Bay in South Australia. In Western Australia deposits occur at Monglinup Creek, near the Oldfield River, at Northampton, in the Murchison division, on the Donnelly River, and at Kendenup, about 40 miles from Albany. At the last mentioned locality, where the ore is of good grade, a fair amount of developmental work has been done.

**8. Gypsum.**—This mineral is found in various places in the Commonwealth. It occurs in two forms, large crystals, and a floury earth consisting of minute crystals and known as "copi." Both forms are exceedingly pure. It is used largely as a natural manure and to some extent in the manufacture of Portland cement. Gypsum, or hydrous sulphate of lime, when burnt, forms plaster of Paris, but in spite of the abundant supply of suitable material it has not yet been used for this purpose. In Victoria during 1916 there was a production of 1853 tons, valued at £1853, obtained at Boort. Numerous deposits of gypsum are found in Southern Yorke's Peninsula in South Australia. A deposit of gypsum sand containing practically an inexhaustible supply is found on the edge of Lake Austin in Western Australia.

**9. Magnesite.**—Deposits of this mineral have been discovered at several localities in New South Wales. During 1916, 3516 tons, valued at £6583, were raised at Fifield, and 200 tons, valued at £200, at Attunga. The mineral is found at Heathcote in Victoria, where 30 tons, valued at £90, were produced in 1916. There are deposits in the neighbourhood of Rockhampton and Bowen in Queensland, and a deposit of exceptional purity has been located in the vicinity of Tumby Bay in South Australia, about five miles from the township of Tumby. The Broken Hill Co. is working a small deposit near the Beetaloo Waterworks. During 1915, 688 tons of magnesite, valued at £1196, were exported from Western Australia, but the export in 1916 amounted to 12 tons only. A large area of magnesite-bearing country has been located at Bulong, about 20 miles east of Kalgoorlie.

**10. Tripolite, or Diatomaceous Earth.**—Although tripolite has been found at Barraba, Cooma, Wyrallah, and in the Warrumbungle Mountains in New South Wales, the deposits have not been worked commercially on any considerable scale. From the deposits at Bunyan, in the Cooma division, 227 tons of diatomaceous earth, valued at £671, were produced in 1916. A small quantity also was raised in the Lismore division. In Victoria there is a remarkably pure deposit at Lillicur, near Talbot, while beds of the mineral are also met with at other places in the Loddon Valley, near Ballarat, at various places close to Melbourne, at Craigieburn, Lancefield, Portland, Swan Hill, Bacchus Marsh, etc. Fairly extensive deposits of diatomite exist in Queensland, in the Nerang, Beaudesert and Canungra areas, but the various outcrops have as yet been only partially examined. In Tasmania a deposit of diatomaceous earth has been located at Oatlands, but its use for the manufacture of explosives is apparently prejudiced by the circumstance that the diatoms are pulverised and contaminated with clay.

**11. Salt.**—Salt is obtained from salt lakes in the Western and North-western Districts of Victoria, and from salterns in the neighbourhood of Geelong. Large quantities are also obtained from the shallow salt lakes of South Australia, chiefly on Yorke Peninsula. Lake Hart, about 60 square miles in area, situated about 120 miles N.W. from Port Augusta, contains immense supplies of salt of good quality, which at present, however, owing to distance from market, possess no economic value. The salt is simply scraped from the beds of the lakes in summer time and carted to the refinery. It is stated that care must be taken not to leave too thin a crust of salt over the underlying mud, as the resultant "crop" after the winter rains will in that case be smaller than usual. A bore put down near Kingscote, on Kangaroo Island, revealed brine from which salt can be profitably obtained by evaporation. In Western Australia supplies are obtained from dried-up shallow lakes and consumed locally or exported. The chief centres of production were formerly Rottnest Island, near Fremantle, and Middle Island, near Esperance, but the greater part of that now produced is obtained at Port Gregory.

**12. Natural Manures.**—Gypsum has already been referred to. (See 8 *ante*.) South Australia possesses deposits of rock phosphate near Port Clinton and Ardrossan on Yorke Peninsula, at Belvedere near Kapunda, and at Koorunga, and also at many other places which have only been prospected to a small extent. Phosphate of lime has been found in small quantities in the limestone caves of New South Wales. In the Wellington division, from the area situated near the caves, about 1700 tons of phosphate, valued at £6000, were raised during 1916. Although it can hardly be considered a mineral product, mention may be made here of the large accumulations of guano on the Abrolhos Islands, off the coast of Western Australia, in the neighbourhood of Geraldton. The deposits vary in thickness from four to twenty-seven inches. During the years 1876-80 over 36,000 tons were raised; no figures are available shewing the quantity raised in recent years.

## § 14. Gems and Gemstones.

**1. Diamonds.**—Diamonds were first noted in New South Wales by E. J. Hargraves in 1851, and in October of the same year by Geological Surveyor Stutchbury. The Cudgegong field was discovered in 1867, and shortly afterwards the Bingara diamondiferous deposits were located. Stones of small size are also found at Cope's Creek and other places in the Inverell district. The largest diamond won in New South Wales was reported to have been obtained in 1905 at Mt. Werong, near Oberon, and weighed 28 $\frac{5}{8}$  carats. It is difficult to secure accurate returns in connection with the production of precious stones, but the yield of diamonds in 1916 was estimated at 1901 carats, valued at £1375, while the total production to the end of 1916 is given at 188,864 carats, valued at £129,071. The yield in 1916 was contributed by miners working in the vicinity of Copeton, in the Tingha division. Owing to the absence of a market consequent on the war the production in 1916 shewed a great reduction on that for 1913, when 5573 carats, valued at £5141 were won. Small quantities of diamonds are found in Victoria in the gravels of streams running through granite country in the Beechworth district, at Kongbool in the Western District, and near Benalla. The stones are generally small and the production up to date has been trifling. In 1912, eleven small diamonds, valued at £20, were picked out of the sluice boxes of the Great Southern alluvial mine at Rutherglen. A few small diamonds have been found in the Pilbara district in Western Australia. In South Australia diamonds have been found on the Echunga goldfield, the most notable gem being Glover's diamond, which was sold for £70.

**2. Sapphires.**—These gems were discovered in New South Wales in 1851, near Burrandong. They have also been found in small quantities near Inverell, and at a few other localities in the State. There is no record of production. Specimens of sapphire have been found in Victoria, but the stones of commercial size are generally of little value owing to flaws.

In Queensland sapphires are found in the gravel of creek beds, between Withersfield and Anakie on the Rockhampton-Winton railway line. The gems show excellent fire and lustre, but the colour is darker blue than the Oriental sapphire. Hyacinths are occasionally found in association with the gems. The production of sapphires in Queensland in 1916 was valued at £14,733, as compared with £600 in 1915, and over £40,000 in 1913. The gem mining industry practically collapsed on the outbreak of the war, as the German buyers ceased business. With the opening up of markets in London and Paris, however, the sale of the gems recommenced, and as satisfactory prices are being realised, the prospects of the field are encouraging. At present there are three regular buyers on the field, and a few casual buyers operate occasionally. About 270 men are engaged in the search for the gems.

Sapphires are plentifully found in the tin drifts of the Ringarooma and Portland districts in Tasmania, but the stones are, as a rule, small and not worth saving.

**3. Precious Opal.**—This stone was first discovered in New South Wales at Rocky Bridge Creek on the Abercrombie River, in the year 1877, and later a most important discovery was made at White Cliffs in the Wilcannia district, which, until recently, contributed the bulk of the production. In 1916, however, out of a total production valued at £21,273, the yield from the Lightning Ridge field, near Walgett, amounted to £20,610, while the output from the White Cliffs field was only £663. The war has had a very depressing effect on the industry, and operations were practically at a standstill on the White Cliffs field. Some very fine stones are at times obtained, one weighing 5 ozs. and valued at £300 being recovered in 1911. Occasionally, black opals of very fine quality are found, one specimen from the Wallangulla field, weighing  $6\frac{1}{2}$  carats, being sold in 1910 for £102. It is stated that this locality is the only place in the world where the "black" variety of the gem has been found. The total value of opal won in New South Wales since the year 1890 is estimated at £1,413,910.

Small quantities of precious opal are also found in the Beechworth district in Victoria.

In Queensland, the first recorded discovery of the gem dates from about 1875. The opaliferous district stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far down as Cunnamulla. The yield in 1916 was estimated at £500, and up to the end of that year at £178,195. These figures are, however, merely approximations, as large quantities of opal are disposed of privately to buyers on the fields, no record of which is obtained. At present, the industry suffers from the peculiar disability that in good seasons there is plenty of work available on the pastoral stations, and most men prefer this to the uncertain results obtainable by fossicking, while in dry seasons when constant work is not obtainable, the search for opal is limited by the difficulty in obtaining sufficient water.

Precious opal has been discovered in South Australia in a locality 144 miles N. by E. of Tarcoola. The specimens show similar characteristics to those obtained at White Cliffs in New South Wales. Production in 1916 amounted to £750.

**4. Other Gems.**—Emeralds were found in New South Wales in the year 1890, near the township of Emmaville, the largest specimen found in the district weighing 23 carats in the rough. Altogether 2225 carats were sent to London during that year, some of the gems bringing £4 a carat, but the production has since dwindled. The mine at the Glen in the Emmaville division was re-opened and worked for a short period during 1908, when about 1000 carats of emeralds, valued at about £1650, were obtained. The largest stone in the rough weighed 60 carats. Small emeralds of fine quality have been found at Poona, in Western Australia, and it is stated that prospecting at greater depths would possibly reveal the existence of larger specimens. Amongst other gems found in New South Wales at various times may be mentioned *turquoises*, discovered in 1894, near Bodalla; *topazes*, fine specimens of which have been obtained in the New England district; and *zircons* and *garnets*. Zircons of small size are plentifully found in the vicinity of Table Cape in Tasmania. Topazes are common in the tin drifts of Tasmania, and some fine specimens have been found. Turquoises are also found in thin veins in Victoria. In Gascoigne's mine, situated near the King River, in the parish of Edi, samples of the gem have been found equal in colour to the best Persian stone, and a considerable quantity of turquoises from this mine has been sold in England and Germany. Fine *agates* are found in many places in Victoria, but have not been made use of to any extent. The gems also occur plentifully in the bed of Agate Creek, about four miles south of Forsayth, on the Etheridge field in Queensland. Garnets are found in Western Australia, and beautiful specimens of *crocidolite* have been obtained at Yarra Creek in the Murchison district. *Rubies* have been found at various places in New South Wales and Queensland. *Tourmaline* has been found on Kangaroo Island, in South Australia, and *beryls* near Williamstown, Victoria, and at Poona in Western Australia. Very large but impure beryl crystals have been found at Ben Lomond in Tasmania. Some fine samples of *chiastolite* or luck stone have been found at Mt. Howden, near Bimbourie, in South Australia.

## (C.) GENERAL.

## § 15. Numbers Engaged, Wages Paid, and Accidents in Mining.

1. **Total Employment in Mining.**—The number of persons engaged in the mining industry in each State and in the Commonwealth fluctuates according to the season, the price of industrial metals, the state of the labour markets, and according also to the permanence of new finds, and the development of the established mines. During the year 1916 the number so employed was as follows :—

## NUMBER OF PERSONS ENGAGED IN MINING, 1916.

State.	Number of Persons Engaged in Mining for						Total.
	Gold.	Silver, Lead, and Zinc.	Copper.	Tin.	Coal and Shale.	Other.	
New South Wales ...	2,317	6,461	1,661	1,938	16,892	2,035	31,304
Victoria ...	6,402	...	...	135	1,281	368	8,186
Queensland ...	1,900	62	2,922	1,093	2,037	1,031	9,045
South Australia ...	150	25	2,000	...	...	625	2,800
Western Australia ...	9,563	244	113	235	458	29	10,642
Tasmania ...	176	555	1,719	1,217	167	30	3,864
Northern Territory*	99	86	97	154	...	40	476
Commonwealth ...	20,607	7,433	8,512	4,772	20,835	4,158	66,317

\* Estimated.

The following table shews the number of persons engaged in mining in the Commonwealth during each of the years 1891, 1901, and 1916, together with the proportion of the total population so engaged. The general falling-off since 1901 is due to the stagnation caused by the war, and largely also to the decline in the gold-mining industry :—

## PROPORTION OF PERSONS ENGAGED IN MINING, 1891, 1901 and 1916.

State	1891.		1901.		1916.	
	Miners Employed.	No. per 100,000 of Popu- lation.	Miners Employed.	No. per 100,000 of Popu- lation.	Miners Employed.	No. per 100,000 of Popu- lation.
New South Wales ...	30,604	2,700	36,615	2,685	31,304	1,674
Victoria ...	24,649	2,151	28,670	2,381	8,186	581

Commonwealth ...	74,820	2,341	113,462	2,992	66,317	1,351

2. **Wages Paid in Mining.**—Particulars regarding wages paid in the mining industry, which in earlier issues of the Year Book were given in this section, have now been transferred to the section dealing with Labour and Industrial Statistics.

3. **Accidents in Mining, 1916.**—The following table gives particulars of the number of men killed and injured in mining accidents during the year 1916 :—

**NUMBERS KILLED AND INJURED IN MINING ACCIDENTS, 1916.**

**§ 16. State Aid to Mining.**

1. **Introduction.**—The terms and conditions under which the States granted aid in mining were alluded to at some length in previous issues (see Year Books IV. and V.), but owing to considerations of space they have been omitted from this issue. A résumé of what is being done in this direction at the present time is given hereunder.

2. **New South Wales.**—The chief aid given in this State is in the direction of assistance to prospectors. Up to the end of 1916 the total sum expended in this manner amounted to £472,118, of which £10,371 was advanced in 1916. During the year the Government subsidy to the Miners' Accident Relief Fund amounted to £11,295.

3. **Victoria.**—Under the Mining Development and Surplus Revenue Acts the sum of £474,723 was expended from revenue, and £285,566 was provided out of votes during the period 1897 to 1916 as follows :—

	£
Advances to mining companies ...	234,207
Advances to prospectors ...	93,404
Boring for gold and coal ...	241,249
Construction of roads and tracks ...	62,990
Erection of testing plants, batteries, etc. ...	87,970
Miscellaneous, cyanide patents, Schools of Mines, etc.	40,469
<b>Total ...</b>	<b>760,289</b>

The expenditure in 1916 was £47,360, of which £23,044 was advanced to companies; £7,558 was loaned to miners; £213 was spent on constructing roads, etc.; £3,028 on boring for gold, coal, etc., and £8,517 on testing plants and miscellaneous. The Government batteries number 30, several of which are managed by local trusts without expense to the Department so far as cost of working is concerned. The State's contribution to the Coal Miners' Accident Relief Fund amounted to £1,479.

4. **Queensland.**—State assistance to the mining industry in 1916 amounted to £27,751, of which £9,406 consisted of loans in aid of deep sinking; £5,616 grants in aid of prospecting; £1,676 in aid of roads and bridges to gold and mineral fields; £1,307 advance under Mining Machinery Advances Act 1906; £4,987 purchase of boring plant and boring for oil at Roma, and £4,759 purchase of diamond drilling plants.

5. **South Australia.**—Aid is given to the mining industry under the terms of the Mining Act of 1893, and previous measures. Up to the end of 1916 the total amount of subsidy paid was £64,123, of which £9,904 has been repaid, leaving a debit of £54,219. Portion of this amount is represented by machinery that has fallen into the hands of the Government. Repayments are made from profits, but in only two instances have the profits enabled a full return to be made. During 1916 the advances made amounted to £2,312, of which nearly £1,600 represented aid given to prospectors for tin.

6. **Western Australia.**—Under the Mining Development Act of 1902 assistance was granted in 1916 in accordance with the subjoined statement:—Advances in aid of mining work and equipment of mines with machinery, £1,368; advances in aid of erection and equipment of crushing plants, including subsidies on stone crushed for the public, £1,761; advances in aid of boring, £119; providing means of transport, £338. In addition, amounts totalling in all £1,802 were expended from the Mining Development vote on various matters such as water supply, roads, cartage, and subsidies for development below the 100 feet level in small mines. Included in the amount of £1,761 is a sum of £627 paid to owners of plants crushing for the public. The receipts under the Act came to £5,857, of which £3,930 consisted of refunds of advances.

In 1916 there were 32 State batteries in operation. The amount expended thereon up to the end of 1916 was £91,981 from revenue and £272,534 from loan, giving a total of £364,515. During the year receipts amounted to £45,258, and working expenditure to £51,178.

The total value of gold and tin recovered to the end of 1916 at the State plants was £4,736,000, resulting from the treatment of 1,114,460 tons of gold ore and 70,970 tons of tin ore.

7. **Tasmania.**—Under the terms of the Aid to Mining Act 1912 the expenditure for the year 1916 amounted to £244, and the total up to the end of that year to £18,899. The bulk of this was expended in mining, prospecting, and development work undertaken by or under the direction of the Department of Mines. Under the Mining and Public Works Appropriation Act 1913, a sum of £4,078 was expended during 1916, while the outlay to the end of that year was £54,888. Of the latter sum, £21,273 consisted of advances on the security of ore produced from any mine in the State, and £11,209 was absorbed by expenses in connection with the State Argent Flat mine, Zeehan. Under the Public Works Appropriation Act 1913, a sum of £289 was expended in 1916, the total expenditure under this Act being £7,278. Further, a sum of £8,979 was expended under the Mining Appropriation Act of 1905 in respect to the State mine at Zeehan. The practice of granting £5 per month to an approved prospector has resulted in the efficient investigation of mining possibilities over a wide area.

8. **Northern Territory.**—During the year 1916-17 the Government aid to mining amounted to £14,596, distributed as follows:—For shaft sinking, £6,174; prospecting, £7,170; purchase of machinery, £900; diamond drilling, £352. Since the passing of the Encouragement of Mining Ordinance in 1913, a sum of £18,566 has been paid in subsidies. There are Government batteries at Maranboy and Hayes Creek.

## § 17. Commonwealth Government Control of Industrial Metals.

1. **General.**—Prior to the declaration of war by Great Britain, practically the whole of the base metal production in Australia had been sold to representatives of the German metal organisation. The outbreak of hostilities threw the industry into chaos, and steps were immediately taken to cancel existing agreements, and to establish the industry on a sound and permanent foundation, consistent with British interests.

The following legislative and administrative acts may be cited:—

- (i.) Cancellation of all mineral and metal contracts with enemy companies and firms.
- (ii.) Dissolution of the Lead Convention controlled by Germans which determined the price to consumer and producer of all Australian lead.
- (iii.) Dissolution of the Zinc Combine—a purely German combine which controlled the world's spelter market, determining price, output, and manipulating the market as it pleased in the interests of Germany.
- (iv.) Elimination of the German interests in the copper industry of Australia.
- (v.) Elimination of all enemy agencies controlling tin, molybdenite, wolfram, and other metals.

The policy of the Government is to have all metallic ores, as far as possible, treated within the Commonwealth, so that the resultant metals can be marketed in a refined state.

2. **Lead.**—Steps taken by the Commonwealth Government resulted in the formation and extension of the Broken Hill Associated Smelters Proprietary Limited, which has taken over the Broken Hill Proprietary Works at Port Pirie, South Australia. The new company is a co-operative institution for the smelting of silver-lead ores and concentrates, and the refining of the silver-lead bullion. It has one of the largest silver-lead smelting works in the world, with a capacity for an output of 160,000 tons of pig lead, and 5,000,000 to 6,000,000 ounces of silver per annum.

The Sulphide Corporation Limited continues to improve and enlarge its lead smelting works at Cockle Creek, near Newcastle, New South Wales. The refinery plant is now in operation and the output of some 60,000 tons of lead per annum with silver and gold made available locally. The works cater for all the smaller mines of New South Wales, Victoria, Queensland and Tasmania, in addition to two of the Broken Hill mines.

The Fremantle Smelters, Fremantle, Western Australia, are owned by the Fremantle Trading Company Limited. The plant running at its full capacity is capable of an annual output of 15,000 tons of pig lead or silver-lead bullion from usual grade lead concentrates. The company is at present smelting only the Northampton lead ores, which contain little or no silver, and the present output is at the rate of 5,000 tons soft pig lead per annum. The plant in operation has a capacity for an annual output of about 7,000 tons of pig lead.

3. **Zinc.** A new company, the Zinc Producers' Association Proprietary Limited, has been formed to control and dispose of the output of zinc concentrates produced within the Commonwealth. All the principal zinc-producing companies are members, and the Association is founded on a co-operative basis. One of the fundamental principles is "equality of treatment" to all members. The Commonwealth Government is represented on the Board, thus safeguarding the interests of the general community.

The output of zinc concentrates within the Commonwealth for the twelve months ended 31st December, 1917, was 294,800 tons, and arrangements have been made whereby 40 per cent. of the normal output may be reserved for local treatment. The Electrolytic Zinc Company of Australasia Proprietary Limited has been formed, and the first unit of the refinery is now in operation. A contract for electrical power has been arranged with the Tasmanian Government, and technical experts have been engaged to install the plant and work the process. In order to facilitate the early establishment of Australian zinc industries, the Imperial Government has undertaken to advance £500,000, if required, to finance Australian zinc works, interest on such advances to be at the same rate as is paid by the Imperial Government. The Mount Lyell Mining and Railway Company Limited, having acquired mines on the West Coast of Tasmania containing large bodies of complex sulphide ores, has formed a new company (The Mount Read and Rosebery Mines Limited) to take over these properties. The new company promises to be a substantial producer of electrolytic zinc. The enlargement of the Broken Hill Associated Smelters' zinc distillery at Port Pirie is also receiving attention.

4. **Copper.**—A new company, the Copper Producers' Association Proprietary Limited, has been formed on the same lines as the Zinc Producers' Association, to control and dispose of the output of copper produced within the Commonwealth. All the principal copper producing companies are members of the Association. As in the case of the Zinc Producers' Association, the Commonwealth Government is represented on the Board of Directors.

The Australian production of copper amounts to approximately 40,000 tons per annum. The whole of this copper is refined in Australia. The Copper Producers' Association has accepted an offer from the British Ministry of Munitions for the Australian output of copper to the 30th June, 1918, excepting copper required for local consumption and copper sold under existing contracts. The amount involved under the contract will be approximately £2,150,000. The price to be paid for electrolytic and/or Wallaroo copper will be £108 per ton f.o.b. Sydney, and for other brands £106 per ton f.o.b. Sydney. If the production of other brands exceeds one-fourth of the total tonnage, the Munitions Department require an abatement in the price of £4 per ton, thus reducing the price for the excess to £104 per ton. The maximum quantity that may be delivered under the contract is 20,000 tons and the minimum 15,000 tons. If the maximum should be exceeded, the surplus will be taken by the British Ministry of Munitions at a price to be negotiated. If, however, the minimum is not reached, the Ministry of Munitions may claim delivery of the deficiency later at the contract price, but has no right to action for breach of contract.

The companies which are members of the Association are represented on the Board of Directors by the following members:—

Messrs. Bowes Kelly, Chairman, J. M. Niall, Vice-Chairman, Hon. W. L. Baillieu, Messrs. H. R. Denison, W. H. Fletcher, General F. G. Hughes, Mr. Percy Pigott, Sir J. Lancelot Stirling, Mr. J. L. Wharton. Sir J. M. Higgins, is the Government representative on the Board.

The Executive Committee appointed by the Board to carry on the general business of the Association consists of Messrs. Bowes Kelly, J. M. Niall, J. L. Wharton, Hon. W. L. Baillieu, Sir J. Lancelot Stirling, and Sir J. M. Higgins (Government representative).

The "Metal Manufacturers Limited" which was formed for the production of copper wire, tubes, sheets, etc., will, when the works are completed, be in a position to meet all Australian requirements.

5. **Tin.**—Encouragement is also given to the refining of tin ore and tin concentrates within the Commonwealth. The principal tin smelters are the Mount Bischoff Company, Tasmania, the Sydney Smelting Company (Pymont Works), New South Wales, and the Irvinebank Company, Queensland.

6. **Molybdenite, Wolfram and Scheelite.**—The Commonwealth Government entered into an agreement with the Imperial Government for the acquisition of all wolfram, molybdenite, etc., produced in Australia. Under this agreement practically the whole of these minerals produced in Australia are being acquired for the Imperial Government, the prices fixed from the 1st January, 1918, being—

Wolfram and Scheelite	... 65 % $\text{WO}_3$	52s. 6d. per unit at producing centres.
Molybdenite	... 85 % $\text{MoS}_2$	100s. per unit at producing centres.

7. **Formation of Metal Exchange.**—Another action of the Government towards the elimination of German influence was the creation of an Australian Metal Exchange with offices at Melbourne and Sydney. No metals or minerals can be exported from Australia unless first registered with the Exchange by an active member, and, during the war, with the consent of the Minister for Trade and Customs. The members of the Exchange must be natural-born British subjects, and the Attorney-General has the right of veto with regard to membership during the war and twelve months after.

## SECTION XIII. MANUFACTURING INDUSTRIES.

### § 1. General.

1. **Industrial Progress.**—The statistics of manufactures in the Commonwealth shew that many industries have now been permanently established on a secure basis, and also indicate a consistent progress both in regard to the extension of existing industries and the establishment of new ones. As will be seen from the following pages, this growth has been particularly rapid since the abolition of inter-colonial tariffs consequent upon the creation of the Commonwealth of Australia in 1901, the throwing open of the whole of the Australian markets to the industrial products of each State having facilitated the internal distribution of the products of Australian industry.

(i.) *The Gold Discoveries, 1851.* Prior to the gold discoveries (1851) there was little development in the manufacturing industries of Australia. Reference to that period will be found in earlier issues of the Year Book (see No. 6, page 524).

(ii.) *Later Progress.* Soon after the discovery of gold, the construction of the first railways (1854) and the re-establishment of regular steamship communication with Europe (1856) helped to encourage the nascent industrial activity. The Colonies of New South Wales and Victoria, which had recently (1855) received the benefits of responsible government, soon turned their attention to the settlement of an agricultural population on the land. The Acts which were passed had a beneficial effect on the workers, giving them opportunities for employment not previously open to them, and fostering the manufacturing industries by increasing the measure of primary production. During the following years the various manufacturing industries prospered. The statistics of the States are not sufficiently complete or uniform to enable a statement of the progress of these industries to be given. The following table, however, shewing, so far as returns are available, the number of factories and the number of employees in each State at decennial periods from 1861 to 1911, and for each of the five years 1912 to 1916, will serve to indicate generally the progress which has been made. Consequent on Victoria and South Australia having fallen into line with New South Wales in furnishing manufacturing returns for the commercial year ended 30th June, it has been found necessary in the present issue to repeat the 1915 year's figures in the case of Victorian and South Australian manufactures, the New South Wales returns being for year ended 30th June, 1916, and those for the other three States for the calendar year 1916:—

**NUMBER OF FACTORIES AND EMPLOYEES IN EACH STATE, 1861 to 1916.**

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
<b>NUMBER OF FACTORIES.</b>							
1861	601	531	...	...	...	...	...
1871	1,813	1,740	...	...	...	...	...

2. **Defects in Industrial Statistics.**—A complete statistical account of the growth of the manufacturing industries in Australia unfortunately cannot be given for any lengthy period, owing to the fact that the necessary statistics have not been collected in past years by the several States upon a definite and identical basis. Even in respect of the definition of a "factory" or (so far as they might be included in related returns) the statistics of persons employed therein, there was formerly no common agreement. The relatively minor place that manufacturing industry held in relation to the total activity of Australia was, perhaps, responsible for the fact that the necessity for uniform method was not earlier recognised.

In 1896 it was agreed, as between Victoria and New South Wales, to adopt a common definition of the term "factory," viz., "any factory, workshop, or mill where four or more persons are employed or power is used." This agreement was adopted for the States generally at the Conference of State Statisticians in 1902, when it was decided, however, that the term "factory" should include also "all establishments, whether making for the trade, wholesale or retail, or for export." It was further agreed that industries should be arranged, as far as possible, under a uniform classification. As a result of the conference of 1902 a higher degree of uniformity in the collection and presentation of industrial statistics was attained in the several States, so that returns upon which anything like a proper comparative study of the development and progress of various manufacturing industries in the Commonwealth may be based, date back only as far as the year 1903, when the resolution of the conference first came to be put into force. All the States did not, however, fall completely into line, and, as may be seen in the succeeding parts of this section, the comparisons afforded by the returns for the years 1903 to 1906 inclusive, are in some cases subject to various limitations. At the Conference of Statisticians held in Melbourne in 1906 special consideration was given to the methods to be adopted for the collection of statistical information regarding primary and secondary production and industry. A definite classification of industries was adopted, and a set of forms for the collection and compilation of industrial statistics on a definite and uniform basis in each State was agreed upon. The States have not, even yet, fallen entirely into line in collecting and classifying the returns. The particulars for the past eight years are, however, in more complete co-ordination than formerly, and it is now possible to give particulars for the several States in greater detail and with greater uniformity throughout.

3. **Classification of Manufacturing Industries.**—Under the classification adopted at the Conference of Statisticians held in 1906, factories were placed under nineteen different categories, according to the nature of the industry carried on therein, most of the categories being further subdivided. Where two or more industries are carried on by one proprietor in one building, each industry is, when possible, treated as a separate establishment. The statement given hereafter shews the classification which has been adopted; it

must be understood, however, that this classification does not pretend to be exhaustive, but merely serves as a guide for the collection and presentation of statistics in the several States on a definite and uniform basis :—

### CLASSIFICATION OF MANUFACTURING INDUSTRIES.

<p><b>CLASS I.—TREATING RAW MATERIALS, ETC.</b> Boiling-down, Tallow Refining, etc. Tanneries Woolscouring &amp; Fellmongering Chaff-cutting, etc.</p> <p><b>CLASS II.—OILS AND FAT, ETC.</b> Oil and Grease Soap and Candles</p> <p><b>CLASS III.—STONE, CLAY, GLASS, ETC.</b> Bricks and Tiles Glass (including Bottles) Glass (Ornamental) Lime, Plaster, Cement and Asphalt Marble, Slate, etc. Modelling, etc. Pottery and Earthenware</p> <p><b>CLASS IV.—WORKING IN WOOD.</b> Boxes and Cases Cooperage Joinery Saw Mills Wood-turning, etc.</p> <p><b>CLASS V.—METAL WORKS, MACHINERY, ETC.</b> Agricultural Implements Brass and Copper Cutlery Engineering Galvanised Iron-working Ironworks and Foundries Lead Mills Railway Carriages Railway and Tramway Workshops Smelting Stoves and Ovens Tinsmithing Wireworking Other Metal Works</p> <p><b>CLASS VI.—FOOD AND DRINK, ETC.</b> Bacon Curing Butter Factories Butterine and Margarine Cheese Factories Condensed Milk Meat and Fish Preserving Biscuits Confectionery</p>	<p>Corn-flour, Oatmeal, etc. Flour Mills Jam and Fruit Canning Pickles, Sauces and Vinegar Sugar Mills Sugar Refining Aerated Waters, Cordials, etc. Breweries Condiments, Coffee, Spices, etc. Distilleries Ice and Refrigerating Malting Tobacco, Cigars, etc.</p> <p><b>CLASS VII.—CLOTHING AND TEXTILE FABRICS.</b> Woollen and Tweed Mills Boots and Shoes Slop Clothing Clothing (Tailoring) Dressmaking and Millinery— Makers' material Customers' material Dyeworks and Cleaning Furriers Hats and Caps Waterproof and Oilskin Shirts, Ties, and Scarfs Rope and Cordage Tents and Tarpaulins</p> <p><b>CLASS VIII.—BOOKS, PAPER, PRINTING, ETC.</b> Electrotyping &amp; Stereotyping Paper-making, Paper Boxes, Bags, etc. Photo-engraving Printing and Binding</p> <p><b>CLASS IX.—MUSICAL INSTRUMENTS, ETC.</b> Musical Instruments and Sewing Machines</p> <p><b>CLASS X.—ARMS &amp; EXPLOSIVES</b> Arms and Explosives</p> <p><b>CLASS XI.—VEHICLES, SADDLERY, HARNESS, ETC.</b> Coach and Wagon Building Cycles Perambulators Saddlery, Harness, etc. Spokes, etc.</p>	<p><b>CLASS XII.—SHIP AND BOAT BUILDING AND REPAIRING.</b> Docks and Slips Sailmaking Ship and Boat Building and Repairing</p> <p><b>CLASS XIII.—FURNITURE, BEDDING, ETC.</b> Bedding, Flock, &amp; Upholstery Billiard Tables Furniture and Cabinet Making Picture Frames Window Blinds</p> <p><b>CLASS XIV.—DRUGS AND CHEMICALS, ETC.</b> Chemicals, Drugs, and Medicines Fertilisers Paints, Varnishes, and By-products</p> <p><b>CLASS XV.—SURGICAL AND OTHER SCIENTIFIC INSTRUMENTS.</b> Surgical, Optical, and other Scientific Instruments</p> <p><b>CLASS XVI.—TIMEPIECES, JEWELLERY, &amp; PLATED WARE.</b> Electro-plating Manufacturing Jewellery, etc.</p> <p><b>CLASS XVII.—HEAT, LIGHT AND POWER.</b> Coke Works Electric Apparatus Electric Light and Power Gas Works and Kerosene Lamps and Fittings, etc. Hydraulic Power</p> <p><b>CLASS XVIII.—LEATHERWARE (N.E.T.)</b> Leather Belting, Fancy Leather, Portmanteaux &amp; Bags</p> <p><b>CLASS XIX.—MINOR WARES.</b> Basket and Wickerware, Matting, etc. Brooms and Brushware Rubber Goods Toys Umbrellas Other Industries</p>
--	--	---

## § 2. Number of Factories.

1. **General.**—In stating the number of factories in the States of the Commonwealth, it is to be remembered that in the collection of statistics for years prior to 1907 the same basis has not been adopted in each State. In Queensland, for example, prior to 1906, the statistics included all establishments where two or more hands were employed, except Government railway workshops, which were not included till 1907. The difference in other respects is not material.

In the following table, shewing the total number of factories in the Commonwealth during the years 1903 and 1911 to 1916, it should be noted that not only are the results affected by differences of classification prior to 1907, but also that the alteration in

the number of factories from year to year does not unequivocally indicate a change in the position of the industry, since amalgamations may account for part of the reduction of the numbers. (See § 3, 5.)

### FACTORIES OF THE COMMONWEALTH, 1903 and 1911 to 1916.

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.

XII. Ship and boat building and repairing ...	87	97	96	93	88	72
XIII. Furniture, bedding, and upholstery ...	613	670	719	703	693	697
XIV. Drugs, chemicals, and by-products ...	189	202	206	213	206	207
XV. Surgical and other scientific instruments ...	41	44	48	52	51	51
XVI. Jewellery, timepieces, and platedware ...	169	177	190	200	199	195
XVII. Heat, light, and power ...	351	372	420	454	474	466
XVIII. Leatherware, n.e.i. ...	62	66	67	65	67	69
XIX. Minor wares, n.e.i. ...	152	147	150	164	160	164
<b>Total ...</b>	<b>14,455</b>	<b>14,878</b>	<b>15,536</b>	<b>15,428</b>	<b>15,092</b>	<b>15,010</b>

For the purpose of the returns in the above table the definition of a factory adopted at the Conference of Statisticians in 1902 (see § 1, 2 hereof) is used, viz., "Any factory, workshop or mill where four or more persons are employed or power is used." The total increase in the number of factories according to this table from 1911 to 1916 was 555, or an average of 111 a year. The state of the manufacturing industries throughout Australia cannot, however, be gauged from a mere enumeration of the number of factories. Some of the factories concerned were practically in their infancy, employing but few hands, while others were developed on a large scale. Also, as pointed out previously, amalgamations may in some instances account for a reduction in the numbers.

(ii.) *Classification of Factories in each State, 1916.* The following table shews the number of factories in each State of the Commonwealth, classified according to the nature of the industry. (See classification given in § 1, 3 hereof):—

## CLASSIFICATION OF FACTORIES IN EACH STATE, 1916.

Class of Industry.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S. Aus. 1915.	W. Aus. 1916.	Tas. 1916.	Cwlth. No.
I. Treating raw material, product of agricul. and pastoral pursuits, etc.	264	322	43	105	39	44	817
II. Treating oils and fats, animal, vegetable, etc.	40	25	15	10	4	2	96
III. Processes in stone, clay, glass, etc.	269	189	41	71	36	20	626
IV. Working in wood	649	410	301	94	66	141	1,661
V. Metal works, machinery, etc.	584	731	218	177	81	41	1,832
VI. Connected with food and drink, etc.	767	631	473	248	141	112	2,373
VII. Clothing and textile fabrics, etc.	985	1,415	247	226	141	71	3,085
VIII. Books, paper, printing & engraving	468	443	143	85	73	23	1,225
IX. Musical instruments, etc.	14	5	...	1	...	...	20
X. Arms and explosives	8	12	...	1	...	...	21
XI. Vehicles and fittings, saddlery and harness, etc.	404	529	144	133	73	51	1,334
XII. Ship and boat building & repairing	30	12	11	8	5	6	72
XIII. Furniture, bedding, and upholstery	246	265	78	48	40	20	697
XIV. Drugs, chemicals, and by-products	94	79	3	11	13	7	207
XV. Surgical and other scientific instruments	14	23	7	2	5	...	51
XVI. Jewellery, timepieces, & platedware	56	94	16	14	8	7	195
XVII. Heat, light, and power	229	142	29	17	32	17	466
XVIII. Leatherware, n.e.i.	26	33	4	3	3	...	69
XIX. Minor wares, n.e.i.	73	53	9	12	11	6	164
Total	5,210	5,413	1,782	1,266	771	568	15,010

2. Use of Mechanical Power.—The principal motive power is steam, but the chief towns possess electric power stations owned either by the Government, or by public bodies or private companies. From these many factories find it convenient to derive their motive power.

The following table shews the number of factories in which machinery was worked by steam, gas, oil, or electricity, and the horse-power of engines or motors used, in each State and in the Commonwealth:—

## UTILISATION OF MECHANICAL POWER IN FACTORIES IN EACH STATE, 1916.

State.	Number of Establishments.			Actual Horse-power of Engines Used.				
	Using Machinery worked by Steam, Gas, Oil, or Electricity	Others.	Total.	Steam.	Gas.	Oil.	Electricity.	Total.
	No.	No.	No.	H.P.	H.P.	H.P.	H.P.	H.P.
N.S.W., 1915-16	4,077	1,133	5,210	177,162	13,926	1,689	58,075	250,852
Vic., 1915	4,030	1,383	5,413	71,223	17,935	2,272	26,385	117,815
Q'land, 1916	1,382	400	1,782	42,529	9,799	1,529	11,960	65,817
S. Aust., 1915	971	295	1,266	26,698	6,888	1,859	6,485	41,930
W. Aust., 1916	616	155	771	26,476	5,094	977	5,605	38,152
Tas., 1916...	474	94	568	5,069	279	215	9,639	15,202
Commonwealth	11,550	3,460	15,010	349,157	53,921	8,541	118,149	529,768

A comparison of the above table with that immediately preceding will explain the preponderance of horse-power employed in the New South Wales factories, this State possessing by far the largest number of industries demanding a considerable amount of power; Victoria, on the other hand, has the largest number of establishments, such as those connected with clothing and textile fabrics, wherein much less mechanical power is utilised.

The number of establishments in the Commonwealth using machinery worked by steam, gas, oil, or electricity was 11,550, or 76.95 per cent. of the total; 3460 establishments, representing 23.05 per cent., used no mechanical power. The total actual horse-power in use was 529,768, of which engines in which the motive power was steam formed 65.91 per cent.; gas, 10.18 per cent.; oil, 1.61 per cent.; and electricity, 22.30 per cent.

The following table shews the horse-power of engines used in connection with factories in the Commonwealth during each of the last six years :—

**UTILISATION OF MECHANICAL POWER IN FACTORIES IN COMMONWEALTH,  
1911 to 1916.**

Year.	Number of Establishments.			Actual Horse-power of Engines used.				
	Using Machinery worked by Steam, Gas, Oil, or Electricity.	Others.	Total.	Steam.	Gas.	Oil.	Electricity.	Total.
	No.	No.	No.	H.P.	H.P.	H.P.	H.P.	H.P.
1911 ...	9,972	4,483	14,455	255,061	35,589	6,024	46,576	343,550
1912 ...	10,556	4,320	14,876	284,228	43,905	6,829	56,797	391,759
1913 ...	11,239	4,297	15,536	313,085	48,677	8,143	72,250	442,154
1914 ...	11,396	4,032	15,428	336,766	50,976	8,542	95,253	491,537
1915 ...	11,438	3,654	15,092	333,494	54,994	8,558	107,788	504,834
1916 ...	11,560	3,460	15,010	349,157	53,921	8,541	118,149	529,768

During the last five years the number of establishments using mechanical power has increased nearly 16 per cent., the actual horse-power of engines used increasing over 54 per cent. during the same period.

### § 3. Numbers Employed in Australian Factories.

1. **Total Number Employed.**—Each person employed in and about a factory, in whatever capacity, is now included as a factory employee, consequently every proprietor who works in his business is counted as an employee, and all "outworkers" (see paragraph 6 hereinafter) are also included. The individuals embraced may be classed under the following heads, viz. :—(i.) Working proprietors; (ii.) managers and overseers; (iii.) accountants and clerks; (iv.) enginedrivers and firemen; (v.) skilled and unskilled workers in the factories, mills, or workshops; (vi.) carters and messengers; and (vii.) others.

(i.) **Average Numbers Employed, 1911 to 1916.** The following table shews, for each year from 1911 to 1916 inclusive, (a) the average numbers of persons (including both sexes and all ages) employed in manufacturing industries in each State; (b) the percentage of the numbers employed in each State on the total numbers employed in the Commonwealth; and (c) the numbers employed per ten thousand of the mean population in each State and the Commonwealth :—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN MANUFACTURING INDUSTRIES,  
1911 to 1916.**

\* Year ended 30th June, 1915.

† See note † first table this section.

(ii.) *Rates of Increase, 1911 to 1916.* From the preceding table it may be seen that during the last three years there has been a general decrease in the average number of persons employed in manufacturing industries during the period referred to. The following table shews the percentage of increase or decrease on the average number for the preceding year from 1912 to 1916. The figures for the past three years are somewhat vitiated by the change in dates of collecting the statistics in New South Wales, Victoria, and South Australia :—

## PERCENTAGE OF INCREASE IN AVERAGE NUMBER EMPLOYED, 1911 to 1916.

Years.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	%	%	%	%	%	%	%
1911-12 ...	6.35	3.72	10.20	2.12	3.69	—3.31	5.03
1912-13 ...	4.19	2.27	3.46	0.04	5.60	—1.74	2.95
1913-14 ...	—3.27*	—0.29	2.17	—5.74	1.97	—8.81	—1.64
1914-15 ...	—3.27*	—3.86	—2.78	—5.13	—17.06	—5.63	—3.21
1915-16† ...	—0.10	—3.86	—4.98	—5.13	—13.64	—0.69	—1.35

Note. — signifies a decrease. \* Eighteen months ended 30th June, 1915. † See note † first table this section.

**2. Classification of Numbers Employed in Factories in the Commonwealth, 1911 to 1916.**—The following table gives a classification of the average numbers of persons employed in factories of different descriptions in the Commonwealth during the years 1911 to 1916 inclusive :—

AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES.  
IN THE COMMONWEALTH, 1911 to 1916.

Class of Industry.	1911.	1912.	1913.	1914.	1915.	1916.
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	9,805	9,624	9,495	9,221	9,306	9,009
II. Treating oils and fats, animal, vegetable, etc. ...	2,019	2,091	2,091	2,259	2,523	2,399
III. Processes in stone, clay, glass, etc. ...	12,093	12,909	13,794	13,570	12,616	11,604
IV. Working in wood ...	27,948	30,660	31,646	30,137	26,030	23,336
V. Metal works, machinery, etc. ...	60,538	66,472	68,839	66,112	65,368	65,850
VI. Connected with food and drink, etc. ...	45,623	46,812	49,882	51,980	49,266	48,272
VII. Clothing and textile fabrics, etc. ...	83,845	84,661	84,237	81,076	78,952	80,292
VIII. Books, paper, printing and engraving ...	24,292	25,077	26,013	25,213	24,928	24,890
IX. Musical instruments, etc. ...	607	628	616	542	515	542
X. Arms and explosives ...	508	899	1,240	1,674	2,028	2,571
XI. Vehicles and fittings, saddlery and harness, etc. ...	13,294	13,400	13,913	13,125	12,350	12,006
XII. Ship and boat building and repairing ...	2,920	3,821	4,216	5,633	6,097	4,605
XIII. Furniture, bedding and upholstery ...	9,480	10,405	10,462	9,534	8,961	8,716
XIV. Drugs, chemicals and by-products ...	4,165	4,381	4,328	4,490	4,601	4,738
XV. Surgical & other scientific instruments ...	233	238	264	282	301	293
XVI. Jewellery, timepieces, and plated ware ...	2,142	2,302	2,170	2,026	1,878	1,835
XVII. Heat, light, and power ...	7,651	8,550	9,394	9,942	9,939	10,018
XVIII. Leatherware, n.e.i. ...	1,225	1,231	1,204	1,217	1,292	1,376
XIX. Minor wares, n.e.i. ...	3,321	3,295	3,297	3,695	4,120	4,400
Total ...	311,710	327,456	337,101	331,728	321,071	316,752

The total increase in the average number of hands employed from 1911 to 1916 was 5,042, or an annual average of 1,008. The greatest development took place in Classes V., VI. and XVII, the increases being 5,312; 2,649; and 2,367 respectively. Decreases occurred in Classes I., III., VII., XI and XVI.

**3. Classification of Numbers Employed in each State, according to Class of Industry.**—The following table shews a similar classification of employees in manufacturing industries in each State:—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES  
IN EACH STATE, 1916.**

Class of Industry.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S. Aus. 1915.	W. Aus. 1916.	Tas. 1916.	C'wlth.
I. Treating raw material, product of agricul. and pastoral pursuits, etc.	3,528	3,345	641	844	267	384	9,009
II. Treating oils and fats, animal, vegetable, etc.	1,103	740	157	221	153	25	2,399
III. Processes in stone, clay, glass, etc.	5,470	3,822	518	1,202	401	191	11,604
IV. Working in wood	7,469	6,345	4,447	1,269	2,205	1,601	23,336
V. Metal works, machinery, etc.	27,367	19,217	6,482	8,096	2,801	1,287	65,850
VI. Connected with food and drink, etc.	14,409	13,778	13,585	3,274	1,566	1,660	48,272
VII. Clothing and textile fabrics, etc.	26,466	38,041	7,526	4,654	2,299	1,316	80,292
VIII. Books, paper, printing & engraving	9,368	8,861	2,962	1,835	1,118	726	24,890
IX. Musical instruments, etc.	351	145	...	16	...	...	542
X. Arms and explosives	1,243	1,324	...	4	...	...	2,571
XI. Vehicles and fittings, saddlery, and harness, etc.	4,049	4,589	1,169	1,275	514	410	12,006
XII. Ship and boat building & repairing	3,223	1,085	118	125	32	32	4,605
XIII. Furniture, bedding, and upholstery	3,464	2,689	1,091	305	381	286	8,716
XIV. Drugs, chemicals, and by-products	1,691	1,860	77	694	334	22	4,738
XV. Surgical and other scientific instruments	115	115	37	6	20	...	293
XVI. Jewellery, timepieces, & platedware	688	825	114	116	61	31	1,835
XVII. Heat, light, and power	3,771	4,012	747	844	340	344	10,018
XVIII. Leatherware, n.e.i.	582	604	139	24	27	...	1,376
XIX. Minor wares, n.e.i....	1,414	2,417	173	192	157	47	4,400
Total	116,401	113,834	39,983	25,496	12,676	8,362	316,752

The largest number employed in any particular class in the Commonwealth was in Class VII., in which there were 80,292 employees, or 25.35 per cent. of the whole number. The class affording employment to the smallest number of hands was Class XV., in which there were 293 hands, or 0.09 per cent. of the total number of employees. Classes VI., VII., and VIII. comprise those industries in which female labour is largely employed. (See § 4. 5 hereof.)

**4. Classification of Numbers Employed in each State according to Nature of Employment.**—In the following table the average numbers of persons employed in each State are classified according to the nature of their employment:—

**AVERAGE NUMBER OF PERSONS EMPLOYED IN EACH STATE, CLASSIFIED  
ACCORDING TO NATURE OF EMPLOYMENT, 1916.**

State.	Average Number of Persons Employed.						Total.
	Working Proprietors.	Managers and Overseers	Accountants and Clerks.	Engine-drivers and Firemen.	Workers, Skilled & Unskilled in Factory Mill or Workshop	Carters, Messengers and Others.	
N. S. Wales, 1915-16	3,959	3,711	4,821	2,798	98,176	2,936	116,401
Victoria, 1915	5,366	3,347	4,062	1,685	95,811	3,563	113,834
Queensland, 1916	1,473	1,435	1,846	1,442	31,827	1,960	39,983
South Australia, 1915	1,243	852	1,098	542	21,209	552	25,496
W. Australia, 1916	520	545	549	362	10,248	452	12,676
Tasmania, 1916	396	371	412	299	6,575	309	8,362
Commonwealth	12,957	10,261	12,788	7,128	263,846	9,772	316,752

\* Including out-workers.

## 5. Classification of Factories according to Number of Hands Employed.—

(i.) The number of factories in each State classified according to number of hands employed, and the average number of hands employed therein are shewn in the following table:—

**CLASSIFICATION OF FACTORIES IN EACH STATE ACCORDING TO NUMBER  
OF HANDS EMPLOYED, 1916.**

No. of Persons Employed in each Factory.	N.S.W. 1915-16.	Victoria. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C wealth.
NUMBER OF FACTORIES.							
Under 4 ...	965	1,148	315	199	183	138	2,948
4 ...	570	623	179	177	85	59	1,693
5 to 10 ...	1,701	1,805	577	468	254	214	5,019
11 to 20 ...	908	827	310	187	121	68	2,421
21 to 50 ...	652	608	238	139	83	60	1,780
51 to 100 ...	211	214	83	52	26	20	606
Over 100 ...	203	188	80	44	19	9	543
Total ...	5,210	5,413	1,782	1,266	771	568	15,010

AVERAGE NUMBER OF HANDS EMPLOYED.

Under 4 ...	2,207	2,635	733	477	372	289	6,713
4 ...	2,280	2,492	716	708	340	236	6,772
5 to 10 ...	11,727	12,390	3,981	3,262	1,773	1,492	34,625
11 to 20 ...	13,160	12,011	4,557	2,647	1,782	996	35,153
21 to 50 ...	20,314	19,621	7,363	4,369	2,601	1,848	56,116
51 to 100 ...	14,659	14,693	6,041	3,548	1,704	1,346	41,991
Over 100 ...	52,054	49,992	16,592	10,485	4,104	2,155	135,382
Total ...	116,401	113,834	39,983	25,496	12,676	8,362	316,752

(ii.) Reference to the following table will shew the tendency for the proportionate number of hands employed in the larger establishments to still further increase and for that of the smaller factories to diminish. During the quinquennial period under discussion, the ratio of hands in factories employing under 21 hands to total number of employees in all factories shews a decline from 27.45 per cent. in 1911 to 26.29 in 1916. A heavier falling-off appears in establishments employing from 21 to 100 hands, viz., 34.21 to 30.97 per cent. The larger establishments with 101 hands and upwards during the same period exhibit an increase from 38.34 to 42.74 per cent. of total employed. The average number of hands per establishment in 1911 was 21.56, and in 1916, 21.10.

**CLASSIFICATION OF FACTORIES IN THE COMMONWEALTH ACCORDING TO  
NUMBER OF HANDS EMPLOYED DURING THE YEARS 1911 to 1916.**

**6. Outworkers.**—The term “outworker” or “homeworker” has acquired a special meaning in connection with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be wrought upon in the employees' own homes. Individuals working for themselves are not included. The following table gives particulars of the average number of outworkers connected with factories in each State during each year from 1911 to 1916 inclusive :—

**NUMBER OF OUTWORKERS\* CONNECTED WITH FACTORIES, 1911 to 1916.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	O'wealth.
1911 ...	784	1,906	158	88	15	96	3,047
1912 ...	895	1,959	140	71	14	86	3,165
1913 ...	724	1,910	522	54	7	72	3,289
1914 ...	582†	1,737	117	58	8	58	2,560
1915 ...	582†	1,473	92	44	6	70	2,267
1916† ...	577	1,473	99	44	6	35	2,234

\* In all tables relating to number of hands employed in factories, outworkers are included.

† Year ended 30th June, 1915. ‡ See note † first table this section.

The Factories Acts in each State contain provisions regulating the employment of outworkers. Generally records of out-work must be kept by factory proprietors, specifying the names and remuneration of workers, and stating the places where the work is done. Further particulars are given in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

### § 4. Sex Distribution in Factories.

**1. Employment of Females in Factories.**—In all the States the employment of female labour in factories is now regulated by Act of Parliament. In Victoria the first Act dealing with the subject was passed in the year 1873, and provided that no female should be employed for more than eight hours a day without the permission of the Chief Secretary. The number of working hours for women is now limited to forty-eight per week in all the States, overtime being allowed only with the permission of the Departments, and then to a limited extent. The maximum periods of continuous labour, and the intervals of cessation therefrom, are also prescribed by the several Acts. Further reference is made to the restrictions regarding the employment of females in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

**2. Distribution of Employees according to Sex, 1911 to 1916.**—In New South Wales the ratio of the number of females employed in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and is now just below one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one woman to three men, and at present is slightly under one to two. In the remaining States, with the exception of Tasmania, the ratios at the latest date were less than one female employed to every four males, and in Tasmania slightly less than one to five. The proportion for the whole of the Commonwealth was more than one to three. The employment of women is, however, largely confined to a few trades.

The great prosperity in clothing and textile industries is one of the main causes of increase in female employment. Certain trades are specifically known as women's trades, such as clothing and textile trades, preparation of food, book-binding, and lighter work connected with the drug trade, as, for example, wrapping. In common also with commercial establishments, a considerable number of factories employ women as clerks and typists.

(i.) *Average Number of Males and Females Employed, 1911 to 1916.* The following table shows the average number of male and female employees in factories in each State from 1911 to 1916:—

#### AVERAGE NUMBER OF MALES AND FEMALES EMPLOYED IN MANUFACTURING INDUSTRIES, 1911 to 1916.

State.	1911.	1912.	1913.	1914.	1915.	1916.†

Commonwealth ...	81,644	83,180	82,994	81,125	80,096	82,745

\* Year ended 30th June, 1915.

† See note † first table this section.

It will be seen that during the years specified there has been for the whole Commonwealth a total increase in the number of male employees of 3,941, or an annual average of 788, and in the number of female employees a total increase of 1,101, or an annual average of 220. The decline in numbers employed since 1913 is, of course, due in a large measure to the disorganising effect of the war.

(ii.) *Average Number of Males and Females Employed per 10,000 of Mean Population, 1911 to 1916.* The following table shews the average number of male and female employees per 10,000 of the mean male and female population respectively in each State from 1911 to 1916 :—

**AVERAGE NUMBER OF MALE AND FEMALE FACTORY EMPLOYEES PER 10,000 OF  
MEAN MALE AND FEMALE POPULATION RESPECTIVELY, 1911 to 1916.**

Note.—The minus (—) sign indicates decrease.

4. **Ratio of Female Employment in Factories.**—The extent to which females are employed in the factories of the Commonwealth may perhaps be best shewn by giving the masculinity of employees for each State for a series of years. The following table furnishes particulars for each of the years 1911 to 1916 inclusive:—

**EXCESS OF MALES OVER FEMALES PER 100 OF BOTH SEXES COMBINED, 1911 to 1916.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1911	51.1	31.5	60.6	62.3	67.3	69.7	47.6
1912	52.6	33.6	62.4	62.0	68.6	68.6	49.2
1913	54.5	34.8	63.9	63.6	69.1	70.8	50.8
1914	*55.0	34.8	65.0	64.6	70.0	70.7	51.1
1915	*55.0	33.5	63.4	62.9	68.0	70.1	50.1
1916	†50.7	†33.5	61.2	†62.9	61.9	68.5	†47.8

\* Year ended 30th June, 1915. † See note † first table this section.

The proportion of the sexes has not materially changed during recent years, the 1915 figure for the whole of the Commonwealth, 50.1, being almost identical with that of 1905, 50.3, while the 47.8 for 1916 accords closely with 47.4 in 1909 and 47.6 in 1911. The tables given in the succeeding paragraph shew that the comparatively high proportions of females have been due not so much to the incursion of female labour into what may be termed men's trades, as to the activity in those trades in which women are ordinarily engaged, more especially in dressmaking, millinery, etc.

**5. Employment of Females in Particular Industries.**—The employment of women in manufacturing industries in Australia is largely confined to a few trades, of which the more important are comprised in Classes VI., VII., and VIII., viz., in connection with food, drink, etc., clothing and textile fabrics, and books, paper, printing, etc. The following table shews the average number of females employed in each of these classes in each State, and also shews the percentages of the average number so employed on the total average number of females employed in all classes of factories:—

**AVERAGE NUMBER OF FEMALES EMPLOYED IN PARTICULAR INDUSTRIES,  
AND PERCENTAGES ON AVERAGE TOTAL EMPLOYED, 1916.**

Class.	N.S.W. 1915-16.	Vict. 1915.	Q'land. 1916.	S. Aust. 1915.	W.Aust. 1916.	Tas. 1916.	CwIth.
AVERAGE NUMBER.							
VI. Food, drink, etc. ...	3,896	3,603	864	442	200	255	9,260
VII. Clothing and textile fabrics ...	19,218	23,262	5,745	3,434	1,792	861	59,312
VIII. Books, paper, printing, etc. ...	2,524	2,378	692	525	253	103	6,475
All other classes ...	3,039	3,620	447	323	172	97	7,698
Total ...	28,677	37,863	7,748	4,724	2,417	1,316	82,745

**PERCENTAGES ON TOTAL AVERAGE FEMALE EMPLOYEES.**

VI. Food, drink, etc. ...	13.59	9.52	11.15	9.36	8.27	19.38	11.19
VII. Clothing and textile fabrics ...	67.01	74.64	74.15	72.69	74.14	65.42	71.68
VIII. Books, paper, printing, etc. ...	8.80	6.28	8.93	11.11	10.47	7.83	7.83
All other classes ...	10.60	9.56	5.77	6.84	7.12	7.37	9.30
Total ...	100.00	100.00	100.00	100.00	100.00	100.00	100.00

It will be seen that by far the greater part of the total number of females employed in factories work in one or other of the three classes of industry indicated, Class VII. being the most important. The classification of the employment of females in the several industries in that class, and the relation of their number to that of the males so employed, are shewn in the following table:—

## FEMALE EMPLOYMENT IN EACH INDUSTRY IN CLASS VII. DURING 1916.

Industry.	New South Wales.* 1915-16.			Victoria* 1915.			Other States.*		
	Males.	Femls.	Femi- ninity. †	Males.	Femls.	Femi- ninity. †	Males.	Femls.	Femi- ninity. †

\* See note † first table this section. † Excess of females over males per 100 of both sexes combined.  
NOTE.—Minus sign (—) denotes excess of males over females.

## § 5. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in each State of the Commonwealth is regulated by Acts of Parliament in a similar manner to the employment of female labour. Excepting under special circumstances, children under a certain age may not be employed in factories. The minimum age in all the States is 14, with the exception of South Australia, where it is 13 years, and Victoria, where the minimum for females is 15 years. Other restrictions on the employment of young persons in factories are more particularly referred to in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation*.) The general object of the restrictions imposed is to assure that a proper period shall be devoted to primary education, and that the early years of toil shall not exhaust the worker before the attainment of full growth.

2. **Average Number of Children Employed in Factories, 1911 to 1916.**—In the statistical compilations of the various States the term "child" may be taken to denote any person under sixteen years of age. The following table shows the average number of children of each sex employed in manufacturing industries in each State during the years 1911 to 1916:—

## AVERAGE NUMBER OF CHILDREN EMPLOYED IN FACTORIES, 1911 to 1916.

\* Year ended 30th June, 1915.

† See note † first table this section.

**3. Percentage of Children to Total Persons Employed.**—The foregoing table shews a general increase in several of the States in the number of children employed in factories during the past quinquennial period. These increases for the first two years, however, when examined in conjunction with the total number of persons employed, shew a fairly regular decrease in the percentage of child labour. This decrease is particularly noticeable in Queensland, the percentage falling from 5.37 in 1911 to 4.30 in 1913. In 1914 there was both an actual and a percentage increase in several of the States, and in all of them during 1915. The 1916 figures shew an actual increase for New South Wales only, but percentage increases for New South Wales and Western Australia, while Queensland and Tasmania shew decreases both actual and per cent. of total employees.

**PERCENTAGE OF CHILDREN IN FACTORIES TO TOTAL NUMBER OF EMPLOYEES,  
1911 TO 1916.**

5. **Apprenticeship.**—It is obvious that the age of apprenticeship in each State must be limited by the conditions governing the employment of child labour in factories. The early Apprentices Acts in some of the States are apparently in conflict on this point with the Factories Acts. The statutes limiting the age at which children may begin to work may be regarded as applicable by way of preventing too early apprenticeship, as may also those directing that education be continued up to a certain age or standard.

Indentures must be entered into specifying the conditions of the employment. Apprenticeships may not exceed seven years in duration, and usually become inoperative at twenty-one years of age, or in the case of women, on marriage. In Tasmania, however, the section of the Wages Boards Act 1910 which deals with apprentices has been amended to provide for the issue of licenses by the Minister to enable persons to complete their term of apprenticeship after the age of twenty-one if necessary.

The Arbitration Courts and Wages Boards have power to limit the number of apprentices which may be taken into a factory and specify the term of apprenticeship. No general statistics of the number of apprentices in Australia have been collected up to the present time. Other enactments relating to child labour are referred to in Section XXVII. of this book, *Industrial Unionism and Industrial Legislation*.

## § 6. Amount of Wages Paid and Value of Production.

1. **Introduction.**—The importance of the manufacturing industries of the Commonwealth is indicated by the fact that the total value of the output for 1916 was £172,574,845, of which amount the sum of £105,180,445 represents the value of the raw materials used. The difference between these two amounts, viz., £67,394,400, represents

the amount by which the value of the raw materials was enhanced in the process of manufacture. The total amount of salaries and wages paid in factories during 1916 was £33,828,840.

**2. Amount of Salaries and Wages Paid.**—The total amount of salaries and wages paid during the year in various classes of factories in the Commonwealth (excluding all sums drawn by working proprietors) is shewn in the following table:—

**AMOUNT OF SALARIES AND WAGES PAID IN FACTORIES  
IN COMMONWEALTH, 1916.\***

\* Excluding all amounts drawn by working proprietors.

The maximum amount of salaries and wages paid in any particular class was in Class V., the amount being £9,022,975, or 26.67 per cent. on the total amount; the minimum amount was in Class XV., £29,508, or 0.09 per cent. on the total amount. The State in which the largest amount was paid was New South Wales. The following statement shews the total amount of salaries and wages paid, and the average amount paid per employee in each State, during each of the years 1911 to 1916; the figures are exclusive of the amounts drawn from the business by working proprietors:—

**AMOUNT OF SALARIES AND WAGES PAID AND AVERAGE AMOUNT PER ANNUM

\* New South Wales figures for year ended 30th June, 1915. † See note ‡ first table this section.

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others (see § 2 hereof). In Victoria, for instance, there are a large number of hands employed in Class VII., of whom a large percentage are women and children. The position occupied by Western Australia is principally due to the high ratio of male to female employees in that State.

It will be noted that there has been a persistent increase in the average wage paid per employee in each of the States during the period under review. Taking the Commonwealth as a whole, during the period 1911-16 there has been an increase of 22.88 per cent. on the total amount of wages paid, and 19.05 per cent. on the average paid per employee.

The following tables shew the approximate amount paid in salaries and wages to males and females in each class of industry in each State during 1916, and the total amounts paid to employees of each sex in New South Wales, Victoria, South Australia and Tasmania during the last six years, and in Queensland and Western Australia during the last five years:—

**AMOUNT\* OF SALARIES AND WAGES PAID TO MALE AND FEMALE HANDS  
EMPLOYED IN EACH CLASS OF INDUSTRY IN THE SEVERAL STATES  
OF THE COMMONWEALTH DURING 1916.**

**3. Value of Fuel and Light used in Factories.**—The amount expended in factories on fuel and light is of considerable importance; in 1916 it amounted to £3,383,598. The classes of industry in which fuel was most extensively used were Class V., Metal Works, Machinery, etc., £1,060,330; Class VI., Connected with Food, Drink, etc., £678,347; Class XVII., Heat, Light, Power, etc., £576,901, of which amount £484,353 was expended on generating electric light and power; and Class III., £402,566, of which £282,364 was represented in brick and pottery works, etc., and glass

factories. The following tables shew the value of fuel and light used in the different classes of industry in the several States of the Commonwealth at latest date and of the total used for each of the last six years :—

### VALUE OF FUEL AND LIGHT USED IN FACTORIES IN COMMONWEALTH, 1916.

\* Year ended 30th June, 1915.

† See note † first table this section.

4. Value of Raw Materials used in Factories.—The total value of raw materials worked up (i.e., exclusive of fuel, lubricants, etc.) in factories in the Commonwealth during 1916 was £105,180,445, which represents 60.95 per cent. of the total value of the finished products. (See next paragraph.) The following table shews the value of the raw materials worked up in various classes of industry in each State :—

## VALUE OF RAW MATERIALS WORKED UP IN FACTORIES IN COMMONWEALTH, 1916.

Class of Industry.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'wlth.
	£	£	£	£	£	£	£

Total ...	44,227,079	30,728,743	16,127,926	8,720,436	3,033,638	2,342,623	105,180,445

The class in which the maximum value of raw materials was used was Class VI., "Connected with Food and Drink, etc.," the value being £44,502,312. The next important class in order of value was Class V., "Metal Works, Machinery, etc.," in which raw materials to the value of £18,345,063 were used. The class in which the minimum value appears is Class XV., "Surgical and other Scientific Instruments," the value being only £21,833. The following table gives particulars for the six years ended 1916:—

## VALUE OF RAW MATERIALS WORKED UP IN FACTORIES IN COMMONWEALTH DURING THE YEARS 1911 to 1916.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

\* Year ended 30th June, 1915.

† See note † first table this section.

5. Total Value of Output of Manufacturing Industries.—The value of the output of new goods manufactured and repairs effected in factories of various classes in each State is shown in the following table. The figures given represent not only the increase in value due to the process of manufacture, but also include the value of the raw materials used. The difference between the value of the materials used and the total output (see paragraph 6 hereof) is the real value of production from manufactories:—

## TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH, 1916.

Class of Industry.	N.S.W. 1915-6.	Victoria. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'w'lth.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural & pastoral pursuits, etc.	6,083,338	4,503,751	2,344,981	838,118	255,036	227,846	14,253,070
II. Treating oils and fats, animal, vegetable, etc. ...	1,409,467	858,554	129,791	182,235	152,527	13,177	2,745,751
III. Processes in stone, clay, glass, etc. ...	1,862,081	1,060,652	126,138	301,247	100,415	36,156	3,486,689
IV. Working in wood ...	3,327,180	2,204,757	1,487,405	757,427	578,525	346,985	8,702,279

XI. Vehicles and fittings, saddlery and harness, etc.	1,129,517	1,188,035	329,772	313,293	168,255	103,714	3,232,586
XII. Ship and boat building and repairing ...	797,608	296,995	30,824	35,218	8,674	8,021	1,177,340
XIII. Furniture, bedding, and upholstery ...	1,108,604	825,541	316,986	185,464	133,302	73,037	2,642,934
XIV. Drugs, chemicals, and by-products ...	1,484,730	1,333,729	44,224	546,145	406,471	20,034	3,835,333
XV. Surgical and other scientific instruments ...	30,458	29,498	9,372	2,240	4,663	...	76,231
XVI. Jewellery, timepieces, and plated ware ...	242,923	313,990	32,096	40,794	18,414	5,834	654,051
XVII. Heat, light, and power ...	2,825,446	1,932,353	602,432	358,275	335,050	170,913	6,214,469
XVIII. Leatherware, n.e.i. ...	281,288	286,920	63,573	8,609	6,011	...	646,431
XIX. Minor wares, n.e.i. ...	501,153	1,120,597	31,964	46,448	35,264	6,016	1,741,442
Total ...	70,989,864	51,466,033	25,541,024	13,994,223	6,007,111	4,576,530	172,574,845

It will be seen that the State of New South Wales far outstrips the other States in the total value of the output of her factories, the value being £70,989,864, or 41.14 per cent. on the total for the Commonwealth. The next State in order of value is Victoria, which produced 29.82 per cent.; the value of the output of Queensland was 14.80 per cent.; of South Australia 8.11 per cent.; of Western Australia 3.48 per cent.; and of Tasmania 2.65 per cent. The two most important classes in order of value of output (Classes VI. and V.) are the same as in order of value of raw materials used. The following statement shews the value of output of factories, value per employee, and value per head of mean population in each State during the six years ended 1916:—

## TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH DURING THE YEARS 1911 TO 1916.

Year.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'wealth.

\* Year ended 30th June, 1915.

† Including working proprietors.

‡ See note ‡ first table this section.

6. Value of Production of Manufacturing Industries.—The difference between the figures given in paragraph 5 and the corresponding figures in paragraph 4 represents the amount added to the value of the raw materials by the process of manufacture. This is the real measure of the value of production of manufacturing industries. The following table shews the value added in this manner in each State for the various classes of factories:—

**VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES IN COMMONWEALTH, 1916.**

Class of Industry.	N.S.W. 1915-16.	Victoria. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	Cwealth.
	£	£	£	£	£	£	£

The amount of the value added in each State is not in the same order as in the case of value of output, the four most important classes being V., VI., VII., and VIII., in the order named. The value added to raw material by process of manufacture and amount per employee and per head of mean population is shewn in the following statement for the years 1911 to 1916:—

**VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES IN COMMONWEALTH, 1911 to 1916.**

As the total value of the output for the Commonwealth was estimated at £172,574,845, there remained, after payment of £105,180,445, the value of the raw materials used, of £33,828,840 for salaries and wages, and of £3,383,598 for fuel, the sum of £30,181,962 to provide for all other expenditure and profits. The following table gives corresponding particulars for each State, expressed absolutely, and as percentages of the total value of the output:—

**VALUE OF OUTPUT AND COST OF PRODUCTION IN COMMONWEALTH  
FACTORIES, 1916.**

**§ 7. Land, Buildings, Plant and Machinery.**

1. **General.**—As an indication of the permanent character and stability of the industries which have been established in the Commonwealth, it may be noted that the values of land and buildings and of plant and machinery used in the factories are rapidly increasing. Thus, for the whole Commonwealth the total value of land and buildings and plant and machinery has increased from 1911 to 1916 by £20,685,100, i.e., from £63,906,846 to £84,591,946, or at the rate of £4,137,020 per annum.

The following statement shews the values of land and buildings and of plant and machinery used in connection with manufacturing industries in each State:—

**VALUE OF LAND, BUILDINGS, PLANT, AND MACHINERY IN CONNECTION WITH MANUFACTURING INDUSTRIES, 1916.**

Value of—	N.S.W. 1915-16.	Victoria. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C'wlth.
	£	£	£	£	£	£	£
Land and buildings ...	17,770,517	11,450,123	5,014,824	3,072,784	2,247,505	1,130,602	40,696,355
Plant and machinery ...	18,211,104	11,068,949	7,543,873	2,990,702	2,817,863	1,263,100	43,895,591
<b>Total ...</b>	<b>35,981,621</b>	<b>22,529,072</b>	<b>12,558,697</b>	<b>6,063,486</b>	<b>5,065,368</b>	<b>2,393,702</b>	<b>84,591,946</b>

The total capital invested in land, buildings, plant and machinery in manufacturing industries in the Commonwealth during the year 1916 was approximately £84,591,946 (or £17 2s. 11d. per head of population); of that sum £40,696,355 was invested in land and buildings occupied as manufactories, the remaining £43,895,591 being the value of the plant and machinery used in connection therewith.

**2. Value of Land and Buildings.**—The value of the land and buildings occupied in connection with manufacturing industries may be conveniently classified according to the nature of the industry conducted therein.

(i.) *Total Value in Commonwealth, 1911 to 1916.* The following table shews for the whole Commonwealth the approximate values of land and buildings occupied in connection with manufacturing industries of various classes during each year from 1911 to 1916 inclusive:—

**VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN COMMONWEALTH, 1911 to 1916.**

Class of Industry.	1911.	1912.	1913.	1914.	1915.	1916.

Total ... ..	17,770,517	11,460,123	5,014,824	3,072,784	2,247,505	1,130,602	40,696,355

The maximum value for the Commonwealth of land and buildings in any particular class was in Class VI., amounting to £10,508,926, or 25.82 per cent. on the total value. The next in order of importance were Classes V., VII., VIII., and XVII., in which the values were £6,583,452, £5,239,362, £3,824,069, and £3,150,513 respectively. The sum of the values for the five classes mentioned amounted to £29,306,322, or 72.01 per cent. on the total value for all classes.

(iii.) *Total Value in each State, 1911 to 1916.* The following table shews the total value of land and buildings occupied as manufactories in each State at the end of each year from 1911 to 1916 inclusive :—

**TOTAL VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES  
IN EACH STATE, 1911 to 1916.**

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

\* Year ended 30th June, 1915.

† See note † first table this section.

It will be seen that since 1911 there has been a general increase throughout the Commonwealth. The States shewing the largest growth were New South Wales, with an average increase per annum for four and a-half years of £954,682, Victoria for four years £384,651, and Queensland with an average of £347,410 for five years.

3. Value of Plant and Machinery.—(i.) *Total Value in Commonwealth, 1911 to 1916.* The following table shews for the whole Commonwealth the approximate value of plant and machinery used in factories during each year from 1911 to 1916 inclusive:—

**VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN COMMONWEALTH, 1911 to 1916.**

Class of Industry.	1911.	1912.	1913.	1914.	1915.	1916.

XIII. Furniture, bedding, and upholstery ...	177,924	207,211	235,068	238,547	244,796	251,822
XIV. Drugs, chemicals, & by-products ...	602,276	629,402	650,185	832,686	916,136	868,126
XV. Surgical and other scientific instruments ...	11,158	11,615	13,121	13,758	13,955	13,873
XVI. Jewellery, timepieces, and platedware ...	61,765	61,791	68,186	69,724	72,988	74,617
XVII. Heat, light, and power ...	6,425,157	7,135,997	7,590,198	9,044,847	9,532,800	9,970,117
XVIII. Leatherware, n.e.i. ...	25,565	27,695	28,035	30,576	31,706	34,240
XIX. Minor wares, n.e.i. ...	138,896	145,141	166,172	199,343	226,285	234,313
Total ...	31,412,596	34,203,934	36,936,831	41,038,551	41,846,166	43,895,591

It will be seen that during the period in question there has been a steady and substantial net increase amounting in all to £12,482,995, or an annual average of £2,496,599. Development has occurred in all classes of industry, the largest increase being in Class XVII., "Heat, Light, and Power," where it amounted to £3,544,960, while the two next largest were in Class VI., "Connected with Food and Drink, etc.," with an increase of £3,083,617, and Class V., "Metal Works, Machinery, etc.," £2,771,137.

(ii.) *Total Value in each State, 1911 to 1916.* The figures which were given in the above table referred to the Commonwealth as a whole. In the following table they are shewn for each State, and it will be seen that the increase referred to above is general throughout the States. New South Wales shews by far the largest increase, viz., £5,700,504; while Victoria comes next with £2,732,576.

**VALUE OF PLANT AND MACHINERY IN FACTORIES, 1911 to 1916.**

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1911	12,510,600	8,336,373	4,947,259	2,319,387	2,082,777	1,216,200	31,412,596

\* Year ended 30th June, 1915.

† See note † first table this section.

(iii.) *Classified Value in each State.* The following table shews the value of plant and machinery used in factories in each State, classified according to the nature of the industry in which used:—

## VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN EACH STATE, 1916.

Class of Industry.	N.S.W. 1915-16.	Victoria. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C'wlth.
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	£ 397,382	£ 318,759	£ 119,164	£ 63,646	£ 23,300	£ 43,681	£ 965,932
II. Treating oils and fats, animal, vegetable, etc. ...	345,704	138,662	42,794	27,105	22,046	566	576,877
III. Processes in stone, clay, glass, etc. ...	1,098,225	439,356	80,823	163,853	66,925	17,811	1,966,993
IV. Working in wood ...	817,519	510,831	465,104	84,223	751,943	177,033	2,806,653
V. Metal wks., machinery, etc. ...	4,956,818	1,560,541	627,147	561,090	597,762	190,735	8,494,093
VI. Connected with food and drink, etc. ...	3,604,699	2,263,565	4,579,428	604,388	436,712	165,390	11,654,182
VII. Clothing and textile fabrics, etc. ...	626,422	890,009	141,871	100,690	35,654	52,112	1,846,758
VIII. Books, paper, printing, and engraving ...	1,277,002	1,010,984	317,583	225,598	161,873	61,901	3,054,941
IX. Musical instruments, etc. ...	13,866	6,725	...	600	...	...	21,191
X. Arms and explosives ...	100,551	127,259	...	400	...	...	228,210
XI. Vehicles and fittings, saddlery and harness, etc. ...	149,952	140,286	41,490	54,485	21,347	13,856	421,416
XII. Ship and boat building and repairing ...	398,881	84,765	7,915	11,240	1,285	7,151	511,237
XIII. Furniture, bedding, and upholstery ...	75,510	77,545	43,284	30,973	14,666	9,344	251,822
XIV. Drugs, chemicals, and by-products ...	238,743	272,545	6,202	177,253	172,638	745	868,126
XV. Surgical and other scientific instruments ...	5,099	4,731	1,838	850	1,355	...	13,873
XVI. Jewellery, timepieces, and platedware ...	30,175	31,461	4,109	5,230	1,747	1,895	74,617
XVII. Heat, light, and power ...	3,968,033	3,041,942	1,059,588	876,140	504,474	519,940	9,970,117
XVIII. Leatherware, n.e.i. ...	14,718	14,672	3,619	317	914	...	34,240
XIX. Minor wares, n.e.i. ...	91,805	134,311	1,914	2,621	3,222	440	234,313
Total ...	18,211,104	11,068,949	7,543,873	2,990,702	2,817,863	1,263,100	43,895,591

The greatest value for any particular class of industry is for Class VI., "Connected with Food and Drink, etc.," and amounts to £11,654,182, or 26.55 per cent. on the total for all classes. The next in order of importance is Class XVII., "Heat, Light, and Power," which amounts to £9,970,117, or 22.71 per cent. on the total; followed by Class V., "Metal Works, Machinery, etc.," amounting to £8,494,093, or 19.35 per cent. on the total value. The total for these three classes amounts to £30,118,392, or 68.61 per cent. on the total value for all classes.

## § 8. Individual Industries.

1. **General.**—The preceding remarks and tables furnish a general view of the recent development of particular classes of industries in Australia treated under the nineteen categories referred to in § 1. 3 hereof. In order to make the information complete, it is necessary to furnish details of the development of individual industries. While it is not possible, within the limits of this article, to give a full and detailed account of all the manufacturing industries of the Commonwealth, it is proposed to deal herein with such particular industries as are of special importance by reason of the number of persons employed, the number of factories, the amount of capital invested therein, the value of the production, or other features of special interest. In cases where there are only one or two establishments of a particular class in any State, returns relative to output are not published, in order to avoid disclosing information as to the operations of individual factories.

2. **Tanning Industry.**—(i.) In Class I. (see § 1. 3 hereof) the most important industry is tanning. Until recent years, the production of tanneries in Australia was confined to the coarser class of leathers, but lately the tanning of the finer skins has been undertaken with satisfactory results. The present position of the industry in the several States is as follows:—

## TANNERIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'with.

Approx. value of land and buildings ...	£ 343,914	366,898	366,696	392,420	389,024	387,706
Approx. value of plant and machinery ...	£ 241,245	250,495	276,610	283,499	287,856	285,956
Total amount of wages paid ... ..	£ 332,206	328,060	322,747	366,484	418,363	423,014
Value of fuel used ... ..	£ 21,711	21,341	19,642	22,573	26,140	27,292
Value of raw materials worked up ... ..	£ 2,099,034	2,216,705	2,428,003	2,732,525	3,188,817	3,283,787
Value of final output ... ..	£ 2,698,250	2,834,007	3,030,785	3,468,475	4,088,140	4,233,427
Value added in process of manufacture ...	£ 599,216	617,302	602,782	735,950	899,323	949,640

\* Including three bone milling establishments in Western Australia.

It will be seen from the above table that as regards the number of factories and of hands employed, the figures during the last five years have been almost stationary. The approximate amount of permanently invested capital, however, shews a very substantial increase, amounting to 12.73 per cent. in the value of land and buildings, and 18.53 per cent. in that of plant and machinery. The amount of wages paid, value of materials used, and of final output, shew the large increases of 27.03, 56.44 and 56.90 per cent. respectively during the same period.

3. *Fellmongering and Wool-scouring.*—(i.) The next industry in importance in Class I. is that of fellmongering and wool-scouring, one of the earliest industries established in Australia. The following table gives particulars of the industry in each State:—

## FELLMONGERING AND WOOL-SCOURING, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Qld. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'with.
Number of factories ... ..	49	30	18	3	...	...	100
Number of employees ... ..	1,474	445	389	71	...	...	2,379
Actual horse-power of engines used ...	3,007	627	736	93	...	...	4,463
Approx. value of land and buildings £	145,862	69,225	43,953	4,490	...	...	263,530
Approx. value of plant and machinery £	187,850	55,307	86,124	4,850	...	...	334,131
Total amount of wages paid ... ..	£ 174,259	49,288	48,363	7,218	...	...	279,128
Value of fuel used ... ..	£ 26,028	8,115	9,961	810	...	...	44,914
Value of raw material worked up ...	£ 3,224,833	939,524	1,580,739	158,053	...	...	5,903,149
Value of final output ... ..	£ 3,704,179	1,095,097	1,995,673	194,173	...	...	6,989,122
Value added in process of manufacture £	479,346	155,573	414,934	36,120	...	...	1,085,973

(ii.) *Development of Fellmongering and Wool-scouring, 1911 to 1916.*—The following return furnishes particulars of fellmongering and wool-scouring establishments in the Commonwealth for the last six years:—

## DEVELOPMENT OF FELLMONGERING AND WOOL-SCOURING IN THE COMMONWEALTH, 1911 to 1916.

Items.	1911.	1912.	1913.	1914.	1915.	1916.
Number of factories ... ..	112	120	119	108	106	100
Number of employees ... ..	2,590	2,544	2,375	2,298	2,337	2,379
Actual horse-power of engines used ...	3,230	3,831	3,966	3,772	3,754	4,463
Approx. value of land and buildings £	273,281	267,188	269,895	256,330	266,440	263,530
Approx. value of plant and machinery £	308,211	348,970	346,381	330,047	329,780	334,131
Total amount of wages paid ... ..	£ 208,627	209,352	230,445	226,509	245,362	279,128
Value of fuel used ... ..	£ 21,581	31,445	33,404	36,658	40,834	44,914
Value of raw materials worked up ...	£ 3,757,750	3,869,200	4,365,413	4,238,705	5,223,231	5,903,149
Value of final output ... ..	£ 4,343,690	4,444,938	4,940,410	4,742,531	5,919,690	6,989,122
Value added in process of manufacture £	585,940	585,738	574,997	503,826	696,459	1,085,973

A slight decline has taken place in this industry during the last five years as regards the number of establishments and of employees. On the other hand, the amount paid in wages, the value of materials used, and of the final output, all shew substantial increases amounting to 33.8 per cent., 57.1 per cent., and 60.9 per cent. respectively.

4. **Soap and Candle Factories.**—(i.) In Class II. (see § 1. 3 hereof) the manufactures of soap and candles are the most important industries. These two manufactures are frequently carried on in the same establishments, so that separate returns cannot be obtained; it may, however, be said generally that the manufacture of soap is the more important of the two. The following table gives particulars of soap and candle factories in each State during the year 1916:—

## SOAP AND CANDLE FACTORIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Qld. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'with.

" added in process of manufacture	£ 4,327,467	4,982,198	5,168,235	5,088,475	4,289,219	3,809,909

The great development in the building and other trades in Australia during the years immediately preceding the war is reflected in the very satisfactory progress of the timber industries, in which there were large increases in wages paid, value of materials used, and final output, as well as in capital invested in land and buildings, and plant and machinery. For the past three years, however, there was, as might have been expected, a fairly considerable decline on the returns for 1913.

**6. Agricultural Implement Factories.**—The manufacture of agricultural implements is an important industry in Australia, and is of particular interest owing to the fact that it is one of the first industries to which the so-called "New Protection" system was sought to be applied (see Section XXVII. hereof). The nature of the articles manufactured may be gathered from the machines scheduled in the Customs tariff, 1906-7, which includes stripper harvesters, strippers, stump-jump ploughs, disc cultivators, winnowers, corn-shellers and baggers, drills, and other implements usually employed in agriculture. The stripper-harvester, which combines the stripper with a mechanism for winnowing and bagging grain, is an Australian invention, and is exported to many countries.

The following table gives particulars of the agricultural implement works of Australia for the year 1916:—

**AGRICULTURAL IMPLEMENT WORKS, 1916.**

Items.	N.S.W. 1915-16.	Victoria 1915.	Q'land. 1916.	S.Aust. 1915.	W.A. 1916.	Tas. 1916.	C'w'lth.
Number of factories ...	23	64	6	54	3	1	151
" employees ...	597	1,678	86	912	261	4	3,538
Actual horse-power of engines employed	327	1,372	97	881	131	3	2,811
Approx. value of land and buildings	£ 92,888	159,942	6,020	67,093	29,065	100	355,108
" plant and machinery	£ 33,905	188,492	7,128	79,585	26,937	350	336,397
Total amount of wages paid during year	£ 70,979	206,764	7,691	97,852	42,389	191	425,866
Value of fuel used ...	£ 2,653	15,337	597	6,142	4,318	20	29,067
Value of raw material worked up	£ 355,144	213,257	10,653	109,276	68,626	275	757,231
Total value of output ...	£ 496,514	526,756	22,030	258,911	152,727	707	1,457,645
Value added in process of manufacture	£ 141,370	313,499	11,377	149,635	84,101	432	700,414

The following table shews the conditions of this industry during the years 1911 to 1916 to have been somewhat fluctuating. A general decline took place during 1914 and 1915, attributable to various causes, the recent drought and a reduction in the exports to other countries being the principal contributing factors. The 1916 figures, however, shew more satisfactory results, being an advance on either of the two previous years as regards material worked up and output:—

**DEVELOPMENT OF AGRICULTURAL IMPLEMENT WORKS IN THE COMMONWEALTH,  
FROM 1911 to 1916.**

**7. Engineering, Ironworks, and Foundries.**—The classification in these industries is not very satisfactory. Generally, engineering shops, ironworks, and foundries are included, as also are factories for making nails, safes, patterns, meters, and springs. Railway workshops, agricultural implement factories, cyanide, smelting, pyrites, and metallurgical works, galvanised iron, stoves and ovens, and wire working establishments are not included. The combination of industries is rendered necessary owing to the limited classification still adopted by some of the States.

In addition to engineering works which supply ordinary requirements, there is now a number of large and important establishments which engage in the manufacture of special classes of machinery and implements. The manufacture of mining and smelting machinery and apparatus forms an important section of this industry.

The development of engineering, ironworks, and foundries in the Commonwealth since 1911 is shown in the following table:—

**DEVELOPMENT OF ENGINEERING, IRONWORKS, AND FOUNDRIES, FROM  
1911 to 1916.**

Items.	1911.	1912.	1913.	1914.	1915.	1916.
Number of factories ... ..	820	877	919	950	950	956
Number of employees ... ..	22,539	25,151	26,014	25,766	25,219	25,718

Value of final output ... ..	£ 6,614,535	7,930,060	8,315,320	8,881,777	8,944,601	10,205,424
Value added in process of manufacture ... ..	£ 3,782,354	4,393,581	4,595,677	4,921,525	4,938,687	5,486,908

The progress in these industries during late years has been very rapid. Since 1911 the number of establishments has increased over 16½ per cent., the number of hands employed 14 per cent., the amount of wages paid 48 per cent., the amount of capital invested in land, buildings, plant and machinery, 85 per cent., and the output over 54 per cent.

8. **Railway and Tramway Workshops.**—(i.) *Details for each State.* The railway workshops of Australia form an important item in the metal and machinery class, and are chiefly State institutions. The following table gives the details concerning them, but includes also private and municipal establishments for manufacturing and repairing rolling stock:—

RAILWAY AND TRAMWAY WORKSHOPS, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C'w'lth.

Value added in process of manuf'ct're £	1,765,697	959,376	478,688	454,494	250,379	65,641	3,974,275

(ii.) *Northern Territory Railway Workshops.* In addition to the above, a railway workshop is in operation in the Northern Territory. The work is confined almost exclusively to repairs to rolling stock, etc., no new goods being manufactured. For the sake of convenience this establishment is not included in any of the tables in this publication.

(iii.) *Development of Railway and Tramway Workshops, 1911 to 1916.* The following table shows the development of railway and tramway workshops in the Commonwealth since 1911:—

DEVELOPMENT OF RAILWAY AND TRAMWAY WORKSHOPS, Etc., FROM 1911 to 1916.

Items.	1911.	1912.	1913.	1914.	1915.	1916.
Number of factories...	72	73	73	75	77	92

" " plant and machinery	£ 1,433,093	1,563,710	1,685,050	2,141,654	2,236,578	2,389,065
Total amount of wages paid...	£ 2,163,460	2,702,711	3,018,968	3,066,734	3,174,946	3,409,265
Value of fuel used ...	£ 69,919	75,476	77,155	90,332	90,490	92,200
" of raw material worked up ...	£ 1,939,477	2,574,737	2,874,535	2,492,217	2,363,785	2,234,063
" of final output ...	£ 4,468,096	5,695,221	6,435,823	6,134,588	6,046,521	6,298,338
" added in process of manufacture	£ 2,528,619	3,120,484	3,561,288	3,642,371	3,682,736	3,974,275

The growth of the railway and tramway systems conjointly with heavy increases in passenger and goods traffic throughout the Commonwealth during the past few years has resulted in corresponding activity in workshops engaged in the manufacture or repair of rolling stock, etc. The above table shows that the number of employees increased 32 per cent. during the last five years, the amount of wages paid 57½ per cent., the final output nearly 41 per cent., while the value added in process of manufacture shows an increase of over 57 per cent.

9. **Smelting Works, etc.**—The subjoined table gives particulars of metal smelting, cyanide, pyrites, and metallurgical works. The classification of these works does not appear to be carried out on a uniform basis in the several States, and the combination of industries is, therefore, somewhat unsatisfactory. The returns do not include particulars of plants used on mines.

**SMELTING, CYANIDE, PYRITES, Etc., WORKS, 1916.**

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.	W.A.* 1916.	Tas. 1916.	C'w'lth.

\* See third paragraph below.

In New South Wales and Queensland the above figures represent smelting works; those for Victoria include forty-four cyanide works, two metallurgical, four pyrites, and two smelting works; South Australia four cyanide and two smelting; and Tasmania two smelting works.

The largest output was in New South Wales, viz., £7,884,570, or 59 per cent. on the total output for the Commonwealth. South Australia came next with £3,707,286, or 28 per cent.; this amount is made up of £3,701,688 smelting and £5598 cyanide. For Tasmania, the output of smelting was £1,323,795. The output in Victoria was £53,828, £42,850, £40,595, and £968 from pyrites, smelting, cyanide, and metallurgical works in the order named.

In Western Australia all the plants are worked on the mines and are therefore not included.

10. **Bacon-curing Factories.**—(i.) *Details for each State.* The following table gives particulars of factories engaged in bacon-curing in each State :—

**BACON-CURING FACTORIES, 1916.**

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.*	W.A. 1916.	Tas. 1916.	C'w'lth.

The butter, cheese and condensed milk industries are dealt with more fully in Section IX., *Farmyard and Dairy Production*.

12. **Meat and Fish Preserving, Ice and Refrigerating Works.**—These industries are now of considerable importance in Australia. Large freezing works have been installed at many ports in the Commonwealth for the purpose of freezing produce chiefly for export, while insulated space for the carriage of frozen produce is provided by a number of steamship companies trading between Australia and other parts of the world. Extensive meat freezing and canning works have recently been erected in the Northern Territory at Darwin at a cost to date of £700,000, and it is estimated that, on completion, the expenditure will have reached three-quarters of a million. The Commonwealth Government has entered into an agreement with the proprietors in regard to the carriage of cattle at special rates provided that private owners of cattle may have their stock treated under reasonable terms and conditions. Operations were commenced early in 1917, and between April and August 18,911 cattle were treated. When the works are in full operation it is expected that from 400 to 500 head of stock will be treated daily. Particulars regarding the export of frozen beef and mutton may be found on pages 314 and 318 hereof respectively.

The particulars given in the subjoined table include ice-making and freezing works, and also meat-canning factories, separate particulars for each item for all the States not being available.

## MEAT AND FISH PRESERVING, ICE AND REFRIGERATING WORKS, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'w'lth.

\* Excluding two meat preserving establishments employing 110 hands.

The following table gives particulars, so far as available, of meat tinned during the year :—

### MEAT PRESERVING WORKS—OUTPUT, 1916.

Output.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C'w'Ith.
Tinned Meat ... .. Cwt.	44,582*	40,927	217,571†	1,488‡	...	...	304,568

\* Also 7,340 cwt. tinned rabbits. † Also 3,452 cwt. salted meat. ‡ Exclusive of large quantity of tinned rabbits, particulars of which are not available for publication.

Large quantities of rabbits, hares, and poultry, for which, however, complete returns are not available, were treated in freezing works. During 1915, over 3,300,000 rabbits and hares were treated in Victoria alone. Exclusive of Victoria, for which State particulars are not available, the returns shew that 92,296 tons of ice, valued at £174,426, were manufactured in the Commonwealth in 1916.

Full particulars of quantities and value of beef, mutton, and lamb preserved by cold process, exported from the Commonwealth during a series of years, will be found in Section VII., *Pastoral Production*.

**13. Biscuit Factories.**—The following table gives particulars regarding establishments at which the manufacture of biscuits, cakes, etc., was carried on in each State during the year 1916:—

### BISCUIT, Etc., FACTORIES, 1916.

**14. Jam and Fruit Preserving, Pickles, Sauces, and Vinegar.**—The jam and fruit preserving industry has increased in importance of late years, consequent on the extension of fruit-growing. As an exporting industry it is comparatively recent, but is of increasing value, and has shewn considerable expansion during the past three years. During the year ended 30th June, 1917, 45,074,352 lbs. of jams and jellies, valued at £949,112, were exported from the Commonwealth. The subjoined table gives particulars of factories at which these industries were carried on in each State during the year. Separate returns for the individual industries are not available for most of the States.

### JAM AND FRUIT PRESERVING, PICKLES, SAUCES, AND VINEGAR. FACTORIES; 1916.

1915	266,302†	134,401	39,734	49,404	32,396	19,573	541,810
1916†	254,393	134,401	42,559	49,404	70,912	25,369	577,038

\* Tons of 2000 lbs. † Year ended 30th June, 1915. ‡ See note † first table this section.

The total production of flour for the Commonwealth for the last year, viz., 577,038 tons, was valued at £7,569,145; in addition 257,385 tons of bran and pollard, valued at £1,648,676, were made. The total quantity of wheat ground was 28,117,519 bushels.

17. **Sugar Mills.**—The following table shews the position of the cane-crushing branch of the sugar-making industry. This industry is carried on in Queensland and New South Wales, the only States of the Commonwealth in which the sugar-cane is grown.

## SUGAR MILLS, 1916.

Items.	N.S.W. 1915-16.	Queensland. 1916.	Total.
Number of factories ... ..	3	42	45
" employees ... ..	463	4,528	4,991
Actual horse-power of engines employed ... ..	1,768	13,473	15,241
Approximate value of land and buildings £	54,000	354,738	408,738
" " plant and machinery £	481,027	2,757,585	3,238,612
Total amount of wages paid during year £	50,811	478,680	529,491
Value of fuel used ... ..	£ 4,270	55,569	59,839
Value of raw material worked up ... ..	£ 222,748	2,089,131	2,311,879
Total value of output ... ..	£ 356,368	3,180,804	3,537,172
Value added in course of manufacture £	133,620	1,091,673	1,225,293

The product of the sugar mill is raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Part of the molasses produced is used in distillation, part is turned into food cake for cattle, and part is used for manuring land, but a considerable quantity is run to waste. The following tables shew the progress of this industry in each State from the dates at which information is first obtainable :—

\* Not available.

The reduction in the number of New South Wales mills is due chiefly to the tendency towards concentration of cane-crushing in mills fitted with modern machinery, and the consequent closing of the small home mill. On the north coast of New South Wales some land formerly devoted to sugar-growing has been turned into pasture in connection with the dairying industry.

## SUGAR MILLS, QUEENSLAND, 1868 to 1916.

Items.	1868.	1876.	1886.	1896.	1901.	1911.	1914.	1915.	1916.

\* No record. † Acres crushed. ‡ Quantity recorded: large quantities run to waste of which no record is kept. § Including 135,390 gallons syrup.

Information regarding the cultivation of sugar-cane may be found in the section of this book dealing with *Agricultural Production*. (See pages 371 to 374.)

**18. Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated upon being originally brought chiefly from Mauritius and the East. In 1916 there were two sugar refineries in each of the States of Victoria and Queensland, and one in each of the States of New South Wales and South Australia. The returns for the individual States cannot be disclosed.

In the six refineries in the Commonwealth, an average number of 1617 hands was employed during the year. The approximate value of land and buildings was £448,871; of plant and machinery, £1,051,171; and the total amount of wages paid during the year was £222,000. The value of all materials used in sugar refineries was £4,965,992, while the total output reached £5,816,915. The amount of crude sugar used was 263,479 tons, and of refined sugar produced 251,764 tons, valued at £5,789,562.

**19. Breweries.**—(i.) *Details for each State.* The following table gives particulars of breweries in each State:—

## BREWERIES, 1916.

Value of fuel used ... £	69,284	76,906	75,824	86,175	81,252	87,375
“ raw material worked up ... £	1,273,522	1,494,070	1,568,620	1,534,656	1,494,974	1,548,615
“ final output ... £	3,318,937	3,647,850	3,817,396	4,107,498	3,869,786	3,872,044
Value added in process of manufacture £	2,045,415	2,153,780	2,248,776	2,572,842	2,374,612	2,323,429

The main feature in the history of the brewing industry, which was established at an early date in Australia, has been the change from the small local brewery in every township of moderate size to the large centralised city brewery. This, however, has not been so much in evidence during the period embraced in the above table, the reduction of the number of establishments during recent years being mainly due to several large amalgamations. The total value of output of breweries in the Commonwealth increased from £3,318,937 in 1911 to £3,872,044 in 1916, and the quantity of ale and stout brewed during the same period increased from 56,346,263 to 60,882,091 gallons. The average production per head of mean population was practically the same for the two years, being 12.55 gallons per head for 1911 and 12.41 for 1916.

20. *Distilleries.*—The subjoined table gives particulars of distilleries in four States. There are no distilleries in Western Australia or Tasmania.

### DISTILLERIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Qld. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'with.

Value added in process of manufacture £	23,950	29,395	27,176	19,549	...	...	100,070

The total quantity of rum distilled during the year was 458,961, of whisky 120,157, of brandy 113,139, and of other spirits 1,734,182 proof gallons. The materials used comprised 396,981 cwt. of molasses and sugar, and 2,019,421 gallons of wine. Particulars for the separate States are not available for publication.

21. **Tobacco, Cigars, and Cigarettes.**—(i.) *Details for each State.* During the year there were thirty-one establishments in which the manufacture of tobacco, cigars, and cigarettes was carried on. There were no factories engaged in this industry in Tasmania.

#### TOBACCO, CIGAR, AND CIGARETTE FACTORIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Qld. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'w'lth. †

§ Incomplete.

(iii.) *Development of Industry.* This industry was among the first to be established in Australia. In 1861 New South Wales had eleven factories, producing 177,744 lbs. of manufactured tobacco; in the same year there was one factory in Victoria, but the quantity of tobacco manufactured is not available. The Australian market has for many years been largely supplied with local manufactures. The quantities imported into Australia during 1916-17 were—manufactured tobacco 1,645,325 lbs., cigars 149,500 lbs., and cigarettes 163,581 lbs., while the quantities manufactured in Australian factories were respectively 10,306,085 lbs., 361,592 lbs., and 3,350,643 lbs. The following tables shew the development of the tobacco manufacturing industry in the Commonwealth during recent years :—

### DEVELOPMENT OF TOBACCO, CIGAR, AND CIGARETTE FACTORIES IN THE COMMONWEALTH, 1911 to 1916.

Value added in process of manufacture ... ..	£ 412,960	461,757	449,965	549,270	778,925	916,971

\*Excluding manufactures of hosiery and knitted goods, numbering 13 establishments in 1912, included in New South Wales returns previous to 1913.

(iii.) *Quantity and Value of Production.* The production of the woollen mills of Australia consists chiefly of tweed cloths, flannels, and blankets, all of which have acquired a reputation for purity and durability. Detailed particulars for the several States are not available for publication. The total length of tweed and cloth manufactured in the Commonwealth during 1916 was 4,707,548 yards. In New South Wales in 1915-16, 2,447,910 yards of tweed and cloth, and in Victoria in 1915, 1,331,137 yards were manufactured. The production of flannel in the Commonwealth amounted to 6,083,392 yards, while blankets, shawls, and rugs to the number of 1,097,178 were manufactured.

No cotton spinning or weaving, or linen weaving is carried on in Australia. Cotton ginning has been carried on intermittently in the northern States, and a mill was lately reopened at Ipswich in Queensland.

23. *Boots and Shoes.*—(i.) *Details for each State.* Among the manufactories of Australia the boot and shoe industry holds an important place both in respect to the employment afforded and the extent of its output. The following table shews latest available particulars of this industry for each State:—

#### BOOT AND SHOE FACTORIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916	S.A. 1915.	W.A. 1916.	Tas 1916.	C'w'lth.
Number of factories ... ..	103	174	26	26	13	10	352

" plant and machinery	£ 153,165	205,538	26,578	25,969	9,450	8,137	428,837
Total amt. of wages paid during year	£ 413,414	625,886	102,250	62,907	23,246	16,997	1,244,700
Value of fuel used ... ..	£ 7,417	11,742	1,109	1,356	529	95	22,248
Value of raw material worked up	£ 857,752	1,502,285	194,336	129,083	65,882	44,053	2,793,391
Total value of output ... ..	£ 1,428,757	2,436,673	367,914	213,398	98,604	71,976	4,617,322
Value added in process of manufacture	£ 571,005	934,388	173,578	84,315	32,722	27,923	1,823,931

(ii.) *Progress of Industry, 1911 to 1916.* The progress of the industry in the last six years is shewn in the following table:—

#### DEVELOPMENT OF BOOT AND SHOE FACTORIES IN THE COMMONWEALTH, 1911 to 1916.

Items.	1911.	1912.	1913.	1914.	1915.	1916.
Number of factories ... ..	341	332	346	357	358	352
Number of employees ... ..	13,772	13,341	13,456	13,192	13,175	13,322
Actual horse-power of engines used	2,405	2,646	2,823	3,091	3,029	3,249
Approx. value of land and buildings	£ 565,735	598,659	629,787	656,576	677,307	692,673
Approx. value of plant and machinery	£ 389,879	398,014	429,994	415,695	418,529	428,837
Total amount of wages paid	£ 1,096,575	1,144,465	1,154,658	1,193,900	1,220,987	1,244,700
Value of fuel used ... ..	£ 16,792	17,244	18,073	18,902	20,713	22,248
Value of raw material worked up	£ 2,151,101	2,184,750	2,308,194	2,437,169	2,673,016	2,793,391
Value of final output ... ..	£ 3,713,948	3,819,371	4,004,466	4,156,590	4,466,885	4,617,322
Value added in process of manufacture	£ 1,562,847	1,634,621	1,696,292	1,719,421	1,813,669	1,823,931

Although the average number of employees in boot and shoe factories shews a slight decline during the past six years, a substantial and consistent advance in the value of output is in evidence during the same period. This is doubtless partly attributable to the increase in mechanical power employed, and the introduction of improved plant and machinery, the value of which was £428,837 in 1916, as compared with £389,879 in 1911.

(iii.) *Quantity and Value of Production.* The number and value of boots, shoes, and slippers made at factories in each State are shewn in the following table:—

### PRODUCTION OF BOOT AND SHOE FACTORIES, 1916.

Particulars.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S. Aust. 1915.	W. Aust. 1916.	Tas. 1916.	C'w'lth..
QUANTITY (,000 OMITTED).							
Boots and shoes ... pairs	3,550	5,257	729	619	217	165	10,537

\* Made for other than factory use.

24. **Clothing (Tailoring and Slop) Factories.**—The importance of this industry in the several States and in the Commonwealth as a whole is shewn in the following table:—

### CLOTHING (TAILORING AND SLOP) FACTORIES, 1916.

Items.	N.S.W. 1915-16.	Vic. 1915.	Q'land. 1916.	S.A. 1915.	W.A. 1916.	Tas. 1916.	C'wlth.
Number of factories ...	451	466	135	127	60	35	1,274
" employees ...	10,544	10,247	3,744	2,254	969	474	28,232
Actual horse-power of engines employed	746	467	261	103	62	8	1,647
Approx. value of land and buildings £	875,701	602,230	263,260	145,384	101,775	70,324	2,058,674
" plant and machinery £	69,338	83,539	42,449	14,199	9,456	2,959	221,940
Total amount of wages paid during year £	784,136	633,545	229,612	129,068	78,766	34,068	1,889,195
Value of fuel used... £	11,741	13,398	4,225	3,139	1,816	448	34,767
Value of raw material worked up £	1,268,476	1,279,278	487,799	174,702	147,643	45,121	3,403,019
Total value of output ... £	2,498,027	2,315,842	902,995	367,223	263,639	100,127	6,447,853
Value added in process of manufacture £	1,229,551	1,036,564	415,196	192,521	115,996	55,006	3,044,834

The substantial development that has taken place in the tailoring and slop branch of this industry may be accepted as an indication of the general prosperity of the community. The value of the output increased from £5,486,388 in 1911 to £6,447,853 in 1916, or approximately 17½ per cent.

### DEVELOPMENT OF CLOTHING (TAILORING AND SLOP) FACTORIES IN THE COMMONWEALTH FROM 1911 to 1916.

## SECTION XIV.

## WATER CONSERVATION AND IRRIGATION.

## § 1. Artesian Water.

1. **General.**—In every country in which droughts are recurrent, there are few problems the solution of which is of greater importance than that of an adequate system of water conservation. Much has been done in the Commonwealth so far as the supply of water to centres of population is concerned, and a description of several of the metropolitan water works will be found herein, viz., in the section dealing with "Local Government." In May 1912 an Interstate Conference on artesian water was held in Sydney, at which it was agreed that combined Governmental action should be taken with reference to delimitation of the artesian basin, hydrographic survey, analyses and utilisation of artesian water, etc. (See map on page 551.)

(i.) *The Great Australian Artesian Basin.* In speaking of the "Great Australian Artesian Basin," the area is understood which includes (a) considerably more than one-half of Queensland, taking in practically all that State lying west of the Great Dividing Range, with the exception of an area in the north-west contiguous to the Northern Territory; (b) a considerable strip of New South Wales along its northern boundary and west of the Great Dividing Range; and (c) the north-eastern part of South Australia proper, together with the extreme south-eastern corner of the Northern Territory. This basin (shewn approximately by the map on page 551) is said to be the largest yet discovered, and measures about 569,000 square miles, of which 376,000 square miles are in Queensland, 90,000 square miles in South Australia, 83,000 square miles in New South Wales, and 20,000 square miles in the Northern Territory. The area of the intake beds is estimated at 60,010 square miles, viz., 50,000 square miles in Queensland and 10,010 square miles in New South Wales. A description of the basin and its geological formation will be found in previous issues of the Year Book (see No. 6, p. 569).

(ii.) *The Western Australian Basins.* The Western Australian Basins fall naturally within five distinct groups, viz., the Eucla Basin, in the extreme south-east of the State, extending well into South Australia along the shores of the Great Australian Bight; the Coastal Plain Basin, west of the Darling Range; the North-West Basin, between the Murchison and Ashburton Rivers; the Gulf Basin, between Cambridge Gulf and Queen's Channel; and the Desert Basin, between the De Grey and Fitzroy Rivers. The boring operations in these basins are referred to hereinafter (see page 538).

The Recent and Tertiary strata which enter Western Australia at its eastern border, and which have a prevailing dip towards the Great Australian Bight, form the Eucla artesian water area. But where boring operations have been undertaken, the water has been found to be salt or brackish, and there are other conditions affecting the supply, such as local variations in the thickness of the beds, their relative porosity, and the unevenness of the floor upon which they rest, which, so far, have not been examined with sufficient thoroughness to enable many particulars to be given in regard to this basin.

In the Coastal Plain Basin to the west of the Darling Ranges artesian boring has, on the other hand, been carried on successfully for many years.

(iii.) *The Murray River Basin.* The Murray River basin extends over south-western New South Wales, north-western Victoria, and south-eastern South Australia. It is bounded on the west by the azoic and palæozoic rocks of the Mount Lofty and other ranges, extending northwards from near the mouth of the Murray to the Barrier Ranges, and on the east and north-east by the ranges of Victoria and New South Wales. This tertiary water-basin is occupied by a succession of sedimentary formations, both porous and impervious. It is of interest to note that the waters of the Murray River are partly supplied by influx from the water-bearing beds of this basin; this is proved by the fact that, at low water, springs are observed at certain places flowing into it from beneath the limestone cliffs from Pyap Bend downwards. Similar springs exist along the courses of other branches of the River Murray system, where they cut through the tertiary formation. On the Victorian side several bores have been put down, and water has been struck at various levels.

(iv.) *Plutonic or Meteoric Waters.* In previous Year Books will be found the theory of Professor Gregory<sup>1</sup> as to the origin of the water in the Australian artesian basin, together with the objections held thereto by a former Government Geologist of New South Wales.<sup>2</sup> (See Year Book No. 6, p. 570.)

(v.) *Particulars of Artesian and Sub-artesian Bores.* The following table gives particulars of artesian and sub-artesian bores in each State and in the Northern Territory up to the latest available date:—

**COMMONWEALTH AND STATES.\*—PARTICULARS OF ARTESIAN AND SUB-ARTESIAN BORES.**

§ Incomplete. ¶ Government bores only. ¶ Exclusive of flow from pumping bores.

2. *New South Wales.*—(i.) *Artesian Water Supply.* The New South Wales portion of the great Australian basin, comprising approximately 70,000 square miles, is situated in the north-western portion of the State. Artesian boring in New South Wales dates from 1879, when a private bore was put down on the Kallara pastoral holding, between Bourke and Wilcannia. The first Government bore was that at Goonery, on the Bourke-Wanaaring road, completed in 1884.

1. See J. W. Gregory, F.R.S., D.Sc.: "The Dead Heart of Australia," London, John Murray, 1906: "The Flowing Wells of Central Australia," Geogr. Journ., July and August, 1911.

2. E. F. Pittman, A.R.S.M., formerly Government Geologist of New South Wales: "Problems of the Artesian Water Supply of Australia, with special reference to Professor Gregory's Theory." (Clarke Memorial Lecture, delivered before the Royal Society of New South Wales, 31st October, 1907); "The Great Australian Artesian Basin," Sydney, 1914; "The Composition and Porosity of the Intake Beds of the Great Australian Artesian Basin," Sydney, 1915.

The following statement shows the extent of the work which has been successfully effected by the Government and by private owners up to 30th June, 1917 :—

### NEW SOUTH WALES ARTESIAN BORES, 1917.

Bores.	Flowing.	Pumping.	Total.	Total Depth.
For Public Watering-places, Artesian Wells, etc. ... ..	124	31	155	320,970
For Country Towns Water Supply ... ..	2	1	3	4,354
For Improvement Leases ... ..	39	3	42	66,287
Total Government Bores ... ..	165	35	200	391,611
Private Bores ... ..	222	69	291	423,837

The average depth is 1,958 feet in the case of Government bores, and of private bores 1456 feet, and it ranges from 89 to 4338 feet. The two deepest wells in New South Wales are those at Boronga, in the County of Stapylton, with a depth of 4338 feet and a present outflow of 958,784 gallons; and at Dolgelly, in the Parish of Carcenga, in County Stapylton, with a depth of 4086 feet, and a present discharge of 577,930 gallons per day. The largest flow at the present time is that at the Wirrah bore, in the County of Benarba, which yields 1,205,190 gallons a day, and has a depth of 3578 feet.

Of the 541 bores which have been sunk, 387 are flowing, and give an aggregate discharge of 95,427,215 gallons per day; 104 bores give a pumping supply, the balance of 50 being failures; the total depth bored represents 877,242 feet.

The flow from seventy-three bores is utilised for supplying water for stock on holdings served in connection with Bore Water Trusts or Artesian Districts under the Water Act of 1912. The total flow from these bores amounts to 38,125,605 gallons per day, watering an area of 4,421,461 acres by means of 2702 miles of distributing channels. The average rating by the Bore Trusts to repay the capital cost, with four per cent. interest, in twenty-eight years, is 1.627d. per acre, including the cost of maintenance and administration.

In the majority of cases the remaining bores are used by pastoralists for stock watering purposes only, but in a few instances the supply is utilised in connection with country towns.

The watering of the north-western country by means of bore water has largely increased the carrying capacity of the land; and, what is of perhaps greater importance, it has made comparatively small pastoral settlement practicable in country previously confined almost entirely to the operations of companies holding immense areas.

It having been determined that multiplicity of bores is the chief factor governing the annual decrease in bore flows, and also that limiting the discharge from a bore will prolong its flowing life, action has been taken to prevent any waste by controlling the bore flow to actual requirements. It is confidently anticipated that this action will materially reduce the rate of decrease in the future.

(ii.) *Shallow Boring.* The scheme described in Official Year Book No. 9 (p. 520) for assisting settlers by sinking shallow bores has met with considerable success.

Operations commenced with one plant only, but the number has been increased gradually until twelve plants are at work.

A large number of applications from settlers wishing to take advantage of the liberal conditions offered under the regulations has been received, and further applications are coming to hand daily, so that even when the whole of the plants referred to are at work, they will probably be insufficient to cope with the demand. Out of 108 bores put in hand up to 30th June, 1917, eleven have proved failures.

There can be no question that the added value of the holdings represented by the bores already put down is considerably in excess of their cost, and as fairly conclusive evidence of this, it might be stated that in several instances the Government Savings Bank has, on completion of a bore, made the settler a sufficient advance to enable him to pay the total cost in cash.

In addition to the work carried out under the Shallow Boring Regulations outlined above, three plants are at present engaged in sinking bores on Crown lands in the Pilliga scrub for the Lands and Forestry Departments.

The fact that of the bores put down in the Pilliga scrub, twenty-five are giving a flowing supply, adds much to their value, and is of special interest as indicating the possibility of tapping a small and hitherto unknown artesian basin.

(iii.) *Private Artesian Bores.* Much has been done in the way of artesian boring by private enterprise. As far as can be ascertained, 318 private bores have been undertaken in New South Wales, of which twenty-seven were failures. The yield of the flowing bores is estimated at over 40 million gallons per day. No data are available regarding the pumping bores.

3. **Victoria.**—Victoria lies altogether outside the Great Australian Artesian Basin, and as water is generally available from surface or shallow underground supplies, there has not been much occasion for artesian boring. As early as 1880, however, an artesian well was bored at Sale, which gave a large supply of water of fair quality before it failed through corrosion of the casing. In 1905 a new bore was put down, which at a depth of 277 feet yielded sufficient water to fill Lake Guthridge, a local depression. But as the water was impure, and contained too much sulphuretted hydrogen, boring operations were continued to 520 feet, when the lowering of the casing shut off the supply of water. A further bore was then put down at some distance from the first, and this, at a depth of 238 feet, yielded a fresh and clear water supply of about 145,000 gallons per day. Corrosion troubles occurred here also, and at the end of 1912 a third bore was put down to a depth of 235 feet, artesian flows being struck at 187 feet and 235 feet. Towards the end of 1915 a flow of 200,000 gallons per day was struck at a depth of 125 feet on the Powerscourt Estate, near Maffra. Other bores are being put down in the locality.

Largely due to the failure of surface supplies in the drought of 1878 to 1886, no less than 499 bores were, before the end of 1888, put down by shire councils aided by the Government. The total depth bored was 40,000 feet; fresh water was struck in 78 instances; 47 yielded brackish but usable water; 229 were salt, while the balance were dry. The bores covered practically the whole of the settled portions of Northern and North-western Victoria and parts of Gippsland.

In the late eighties a number of bores were put down in the north-western part of the State, varying from 200 to over 2000 feet in depth, but without any notable success. In 1897 a Board reported on boring for artesian water supply in the Mallee country, but this report was adverse, except as regards the extreme northern portion thereof. In 1906 eight bores were put down on the Overnewton Estate, Maribyrnong, to depths varying from 147 to 272 feet; small supplies of good and medium water for stock purposes were obtained, but only one of the wells yielded water fit for domestic purposes. In 1908 boring was commenced in the Mallee country near the Border east of Pinnaroo in South Australia, and a line of bores from the Border to Kow Plains has proved the existence of a large sheet of underground water. Altogether, 87 bores have been successful in striking fresh water, and their depths vary from 155 to 752 feet, the water rising to within from 207 to 6 feet of the surface. In three instances the bores flow, the water

rising from four to seventeen feet above the surface. The fresh water extends nearly as far east as the 142nd meridian, and its northern limit is approximately the 35th parallel.

At the end of 1916 the number of existing Government bores in use in Victoria was 83, from which supplies are obtained by pumping. The total depth bored amounted to 39,783 feet, while the maximum and minimum depths at which water was struck were 1400 and 150 feet respectively. There are also about 140 existing private bores, with a total depth of about 30,000 feet.

4. **Queensland.**—A return relating to the 30th June, 1917, classifies the Queensland artesian bores under the following headings:—

**QUEENSLAND ARTESIAN BORES, 30th JUNE, 1917.**

Sunk by—	Artesian Flows.	Sub-Artesian or Pumped Supplies.	In Progress, Abandoned, or Uncertain.	Total.
Government ... ..	60	81	99	240
Local governing authorities ... ..	14	17	14	45
Private owners ... ..	1,072	987	717	2,776
Total ... ..	1,146	1,085	830	3,061

Of the 1146 flowing bores, 121 were of less than 10,000 gallons per day; 253 from 10,001 to 100,000 gallons; 476 from 100,001 to 500,000 gallons; 273 from 500,001 to 1,500,000 gallons; 18 from 1,500,001 to 2,000,000 gallons; and 5 from 2,000,001 gallons upwards. The deepest well was about forty miles west of Blackall, lying east of the Barcoo River; this had a depth of 5610 feet, and was stated to yield 80,000 gallons daily. Further sinking is in progress. The flow is, of course, a comparatively small one, many wells yielding, when uncontrolled, from one to three million gallons a day. The waters of many of the wells have been analysed, and some found suitable for wool-scouring only, others are suitable for watering stock but not for irrigation, owing to the presence of alkali; others again serve for both stock and irrigation, while some, such as those containing sulphuretted hydrogen, are not of any use. Water fit for stock may generally be said to be "safe" for domestic purposes in spite of its slightly mineral taste. The wells yielding the mineral waters known as "Helidon Spa," "Boonah Spa," and "Junot Spa," which are much in use in Queensland and New South Wales, are shallow wells from 60 to 200 feet in depth.

The following table shews particulars as to Queensland bores at the end of June, 1917:—

**QUEENSLAND ARTESIAN AND SUB-ARTESIAN BORES, 30th JUNE, 1917.**

Minimum ... .. °Fahr.	85	81	...

5. **South Australia.**—There were in South Australia 141 bores existing at 31st December, 1917, of which 34 were artesian and 107 sub-artesian. There are 107 under 1000 feet in depth, 20 from 1000 to 2000 feet; six from 2000 to 3000 feet; five from 3000 to 4000 feet, and three over 4000 feet. The deepest flowing bore was at Patchawarra, on the Farina to Haddon, via Innamincka, route, measuring 5458 feet, but yielding only 200 gallons per day. The maximum flow, viz., 1,250,000 gallons, is obtained at Coonie Creek, east of Lake Frome.

The following table shews particulars as to South Australian bores at the end of December 1917:—

\* Not available.

(i.) *Bores between the Murray and the Eastern Boundary of the State.* The sinking of bores across the Ninety-mile Desert between the Murray and the Victorian boundary was commenced in 1886 at Coonalpyn; with the exception, however, of salt water at 55 ft., no success was met with. Ki Ki bore was sunk in 1887, and at 361 ft. a good supply of water fit for stock was struck. Tintinnarra bore was sunk in 1887; it was artesian when first tapped. The water was found to be fit for locomotive engines and is still used for that purpose. The bore at Emu Flat was also sunk in 1887. In 1904 a bore was sunk at Cotton, and numerous successful bores have since been put down by the Public Works Department, and subsequently by residents of the district. The water rises to a distance from the surface of from 15 to 320 feet, and the maximum quantity obtained per diem is 48,000 gallons at the Gosden bore. Several wells, ranging in depth from 55 to 221 feet, have also been sunk in this district. The latest Government bores are Kumara in the Hundred of Kingsford, and Perponda in the Hundred of Vincent. The former has a depth of 240 feet, and the water, which is in large supply, rises to within about 96 feet of the surface. The latter is 300 feet in depth, and the water rises to within 56 feet of the surface. The water is fresh, containing about  $\frac{3}{4}$  oz. salts and other solid matter per gallon.

(ii.) *Bores West of Oodnadatta.* A series of bores has been sunk, beginning with Broaden bore, 20 miles west of Oodnadatta, which was put down in 1911. The others since put down in this district are at Gypsum, Imbitcha, Mirackina, Raspberry Creek, Appreetinna, Wintinna and Marla. Of these, the only artesian supply is at Raspberry Creek, where 1,000,000 gallons per day of good water is obtained. The depths of these bores range from 280 feet at Mirackina to 1122 feet at Broaden, and the water from all of them is good.

(iii.) *Other New Bores.* New bores have been sunk at Peachawarrina, about 45 miles north-east of Marree, to a depth of 2484 feet, a large supply of good water being obtained, flowing over the surface at the rate of 500,000 gallons per diem; Possum bore, on

Opossum Creek, 1334 feet; and Allinga bore on Allinga Creek,  $2\frac{1}{2}$  miles north-west of Mount Ludgate, 1160 feet, where a good supply of water was obtained, flowing over the surface at the rate of 412,800 gallons per diem.

(iv.) *Eyre Peninsula.* From time to time bores have been sunk on Eyre Peninsula, but with little success. In some instances, stock water ( $1\frac{1}{2}$  ozs. salts to the gallon) was obtained, but this only occurred on the Nullarbor plains. In all other cases the water struck was far too salt to be used. Consequently the supply of water is now principally from catchments. A number of reservoirs have been constructed to hold from 1,000,000 to 9,000,000 gallons each. Many underground tanks have been built to contain from 40,000 up to 500,000 gallons each.

6. *Western Australia.*—The work by which the Government of Western Australia provides a permanent supply of water to Kalgoorlie, Boulder and adjacent districts on the eastern goldfields comes properly under the heading of "Water Supply Works." A description of this undertaking is fully given in previous issues of the Year Book. (See No. 6, p. 576.)

In August 1912 the administration of the Goldfields Water Supply and of the Mines Water Supply was transferred to a newly established Water Supply, Sewerage and Drainage Department. The statistics in connection with this department will be found in the section of this book dealing with *Local Government*.

The following table shews particulars as to Western Australian artesian bores at 30th June, 1917 :—

WESTERN AUSTRALIAN ARTESIAN BORES, 30th JUNE, 1917.

\* Not available.

To 30th June, 1917, the total number of Government bores was 66, and there were approximately 49 private bores recorded in addition. The total cost of construction of State bores to 30th June, 1917, was about £137,874, of which amount £96 was expended during the twelve months ended 30th June, 1916. The maximum outflow, 4,000,000 gallons per day, was obtained at Leederville in connection with the Metropolitan Water Supply at 2097 feet.

The boring operations which have been carried out in the artesian basins along the West Australian Coast are as follows :—

(i.) *The Coastal Plain Basin or Perth Area*, which, generally speaking, extends from Cape Leeuwin to Dongarra, and from which the Metropolitan Water Supply is largely drawn, yields a supply of water mostly fresh and suitable for domestic purposes, though towards the north it becomes brackish and is only suitable for stock purposes.

There are fifty-seven bores in the Metropolitan District, several of which have been put down to augment the hills supply and the domestic supply of the suburbs, and Fremantle is largely dependent upon this source.

(ii.) *The North-west Basin or Carnarvon Area* may be said to extend from Gantheaume Bay in the south to Onslow in the north, and embraces a very large tract of ideal sheep country.

Many private bores have been put down on sites which permit of the gravitation of the water for miles, and, by this means, a very considerable area has been put under stock. Some remarkable flows have been obtained and, in one case, at a depth of 300 feet a flow reputed to be 3,000,000 gallons per day was struck, the water being suitable for stock.

In all, about 27 bores have been put down.

(iii.) *The Gulf Basin or Broome Area.* So far very little development work has been done. Artesian bores have been put down in the town site, and the domestic requirements of the town are entirely supplied from this source.

The area extends from Condon in the south-west to the Meda River beyond Derby in the north, and for a considerable distance inland.

So far only five bores have been sunk, two being at Broome and two at Derby, and one on the telegraph line on the road between Derby and Hall's Creek, about 67 miles inland.

(iv.) *Eucla Area.* This area extends from Eucla on the South Australian border, to west of Israelite Bay. So far, beyond the bores put down on the route of the Trans-Australian Railway, very little has been done in proving the resources of this area.

In 1902 the first bore was sunk, about 35 miles north of Madura, and sub-artesian water struck at 430 feet, at an elevation of 400 feet above sea level.

Following upon this, a deep bore was put down at Madura, below the cliff and nearer the coast, when an artesian supply of stock water was obtained at a depth of 2101 feet, yielding 31,000 gallons per day.

This was followed later with about 20 bores along the survey line of the proposed railway, which runs east and west about 90 miles inland. These bores were put in at intervals between the 205 mile peg and the South Australian border, and ranged in depth between 323 and 1344 feet. In most instances only stock water was struck at depths varying between 300 and 1300 feet, and the largest estimated supply was about 10,000 gallons per day.

**7. Northern Territory.**—In the Northern Territory, bores to the number of 128 were put down up to 31st December, 1914, 25 belonging to the Commonwealth Government. The cost of construction of the Government bores to that date was £6254. The total depth bored in State bores was 17,600 feet; in private bores 34,694 feet. Maximum depths were 213 feet in State, and 502 feet in private bores, and minimum depths were 110 feet and 128 feet respectively.

## § 2. Irrigation Plants.

**1. General.**—Australia's first experiments in irrigation were made with the object of bringing under cultivation areas in which an inadequate rainfall rendered agricultural and even pastoral occupations precarious and intermittent, and, although these original settlements have for the most part proved fairly successful, most of the States, instead of promoting new settlements in unoccupied regions, are adopting the policy of making existing settlement closer, by repurchasing big estates and large farms, subdividing them into holdings of suitable sizes for cultivation, and selling the land upon easy terms of payment. It is in connection with this Closer Settlement policy that the special value of irrigation is recognised.

**2. New South Wales.**—(i.) *Water Conservation and Irrigation Commission.* The provision of an adequate water supply for other than domestic purposes is essential to the well-being of all primary industries, and particularly in a country liable to dry

seasons which affect extensive areas. A large portion of the State receives an adequate and regular rainfall, but there is a considerable extent of country where all the factors exist which are requisite to success in agricultural pursuits excepting only a constant water supply. The recognition of the fact that the area suitable for cultivation might be extended largely by a comprehensive system of water conservation and irrigation has induced the Government to undertake various detached works and schemes, which will constitute portion of the ultimate irrigation system necessary to serve the whole State.

Water conservation and irrigation works within the State of New South Wales are under the control of the Water Conservation and Irrigation Commission, which consists of the Minister for Agriculture for the time being as Chairman, and two other Commissioners. The works controlled by the Commission include the great Murrumbidgee Irrigation Scheme, the small irrigation settlements at Hay and Wentworth, natural works of water conservation, shallow boring for settlers, and water trusts and artesian bore trusts operating under the Water Act. The Commission has control also of storages and diversions of water by private persons for purposes of water conservation and irrigation.

(ii.) *Murrumbidgee Irrigation Scheme.* The main features of the scheme include the storage dam across the Murrumbidgee to retain the floodwaters, which will be released for use lower down the river during the dry summer months; a movable diversion weir, about 240 miles below the dam, to turn the required amount of water from the river into the main canal; a main canal, leaving the river near the weir; four main branch canals; and a series of subsidiary canals and distributing channels through the area to be irrigated; bridges, checks, regulators and other structures throughout the entire system, and meters for measuring the volume allowed to each farm; towns and villages, also roadways to serve each farm, and a general surface drainage system, are also included in this scheme.

The site of the storage dam is at Burrinjuck, three miles below the confluence of the Murrumbidgee and Goodradigbee Rivers. The dam wall is being constructed of cyclopean masonry and concrete, and when completed will have a maximum height of 240 feet, and will impound the waters in a lake covering 12,740 acres. Ample water is being stored to meet the requirements of the farms already occupied, and to allow of water being drawn off during the summer months to augment the natural flow of the river for the benefit of riparian holders down stream. The reservoir will have a capacity of 33,612 million cubic feet, or 771,641 acre feet, the catchment area being about 5000 square miles, drained by three principal streams—the Murrumbidgee, Goodradigbee, and Yass Rivers—up which the water will be backed, when the dam is full, to distances of 41 miles, 15 miles, and 22 miles respectively. Direct communication between Burrinjuck and the Main Southern railway has been provided by the construction of a 2-foot gauge line from Goondah, a distance of 26 miles.

The diversion weir is situated at Berembé, about 40 miles by river and 19 miles in a direct line above the town of Narrandera. It is founded on a solid granite bar extending across the river, and has a length over all of 270 feet between abutments, divided into a sluiceway 40 feet wide in the clear; a lock chamber, 40 feet wide, capable of taking barges up to 100 feet in length; and 55 channoiné wickets, manipulated from a punt moored up-stream. During the winter freshets the wickets are lowered, thus affording a clear water-way in the river channel.

The main canal branches from the river just above the weir, and, after passing through Narrandera, continues in a north-westerly direction, skirting the hills abutting on the plains. A scheme for enlarging the main canal to double its present capacity (1000 cubic feet per second) has been recommended by the Public Works Committee. The principal canals are the Gogeldrie canal, which off-takes at 47 miles from Berembé, and runs approximately parallel to the Narrandera-Hay railway through the Yanco area, and the Mirrool branch canal, which off-takes at 78 miles from Berembé and supplies portion of the Mirrool area.

The scheme, as described above, applies only to the land on the northern side of the Murrumbidgee River. It was originally intended to provide a canal to supply the land on the southern side, but subsequently it was decided to apply all the water available from the Burrinjuck Dam to the northern areas, sufficient land suitable for irrigation being there available, which, it is anticipated, will be worked profitably in small blocks devoted to mixed farming, dairying, and stock raising, or fruit and vegetable growing, etc. When the areas are fully settled it is estimated that there will probably be nearly 6000 farms and 100,000 people. With the aid of irrigation the soil and climate of these areas are suitable for the production of apricots, peaches, nectarines, prunes, pears, plums, almonds, melons, cantaloups, and citrus fruits, also wine and table grapes, raisins, sultanas, figs, olives, and most varieties of vegetables and fodder crops. Dairying, and pig-raising are already being successfully undertaken by settlers in the areas.

The first area made available for settlement was in the vicinity of Yanco Siding on the Hay railway line. The second, which is situated on the northern side of the Mirrool Creek, is served by an extension of the railway from Barellan to Griffith.

Further areas are being thrown open for settlement as the construction works are completed. Farms varying in size from 2 acres to over 200 acres have been made available. The "water right" or number of "acre feet" of water allotted to each holding is specified when the holding is notified as available for application. An "acre foot" of water means such a quantity, 12 inches deep, as would cover an area of one acre. The cost of water is five shillings per acre foot. The charge for water is reduced during the early years. For the first year the charge is 2s. 6d. per acre foot, thereafter increased annually by sixpence per acre foot until in the sixth and following years the full rate of five shillings becomes payable. The average "all-irrigable" farm is about 50 acres, but to suit the requirements of dairymen and other stock farmers, blocks of larger areas have been made available. These comprise non-irrigable or "dry" areas, in addition to the irrigable portion. Some of these mixed farms are 200 acres or upwards in extent, but the maximum water right allowed in respect of any of these larger farms is 100 acre feet. Additional water may be obtained, if available, by arrangement.

The conditions for the disposal of irrigation blocks are contained in the Crown Lands Consolidation Act of 1913, and Amending Acts. Any person of or over the age of 16 years, if a male, or 18 years if a female (other than a married woman not living apart from her husband under decree of judicial separation), or two or more such persons jointly, may apply for a farm or block. A married woman, not judicially separated from her husband, may, however, if she be not subject to any other statutory disqualification: (a) acquire by way of transfer, with the consent of the Minister, out of her own moneys, a lease within an irrigation area; (b) continue to hold a lease which she held before her marriage; (c) hold a lease which may devolve on her by will or intestacy of a deceased person. The tenure is perpetual leasehold.

The improvement conditions attached to the farm holdings include fencing, planting of trees for windbreaks, construction of dwellings, destruction of noxious plants, and the cultivation of a specified area in each year.

The special reservation of a number of farms for application by returned soldiers is in contemplation. As a preliminary measure a camp has been established on the Mirrool Subdivision, at which it is proposed to employ returned soldiers in the first instance, and thus afford the men an opportunity of gaining an insight into the climatic and other conditions connected with irrigation farming. It is proposed that accepted applicants for this camp shall receive a weekly payment exclusive of their keep, and while in camp they will clear, fence and grade the land, which will ultimately be made available to them for application as irrigation farms. Barracks have been provided, and a camp manager will have direct control thereof.

Subject to such conditions as to security and terms of repayment as the Commission may think fit to impose, settlers may obtain an advance, or have payment of rent or water rate suspended. Such advances are limited to the total amount of funds made available by Parliament for this purpose.

The Government Savings Bank Commissioners have statutory power to make loans upon mortgage of irrigation farm leases, and many settlers have already obtained help from the Bank. Concessions in railway fares and freights are made on New South Wales railways to *bona fide* applicants for land.

Towns and villages have been established at centres of the Yanco and Mirrool irrigation areas; the Commission is empowered to construct streets, and to provide water supply, sanitary and other services.

An up-to-date butter factory is in operation at Leeton. The output at the end of 1917 reached 5 tons per week, from an average of 120 to 130 suppliers. The factory also supplies ice to town residents and settlers. A fruit and vegetable canning factory with a rapidly increasing output has also been provided, which purchases vegetables and fruits grown by the settlers. A bacon factory and abattoirs have been erected at Yanco, where about 300 pigs, including a considerable number from other districts in the Riverina outside the irrigation areas are treated weekly, and where stock for butchers is slaughtered for local consumption.

To assist settlers on the Mirrool area, which is situated over 30 miles from Leeton, a small cheese factory has been opened at Griffith. A good marketable cheese is being produced. As an adjunct to the canning factory, a pulping plant has also been installed at Griffith.

One of the most important departmental undertakings on the irrigation areas is undoubtedly the State Nursery. For some years past the Leeton Nursery has been supplying trees to settlers, and in 1916 a second nursery was established at Griffith. Every effort is made to supply only the very best trees, free from disease, and to ensure this, as much use as possible is being made of budding wood from proven trees in the Leeton Nursery, and at the Yanco Experiment Farm.

The Department of Agriculture, which controls the Yanco Experiment Farm, has also established at Griffith (Mirrool irrigation area), a Viticultural Nursery for the propagation of vines on phylloxera resistant stocks. These stocks are intended not only for the supply of settlers on the areas, but for vigneron in all parts of the State.

An electric power station has been erected near Yanco Siding; electric light and power are supplied to the various factories, business people, and residents of Leeton and Yanco, and the supply is also available for settlers when the number of applicants in any centre warrants the connections being made.

On the 31st December, 1917, 831 farms were held, representing a total area of 36,433 acres. In addition, 135 town land blocks were held under lease.

In the matter of cultivation, the following particulars indicate the extent of the work performed by the settlers:—3112 acres under stone fruit, 346 under pome fruit, 1656 under citrus fruits, 1171 under vines, and 327 acres under mixed fruits. Particulars as to the area under fodder crops in 1917 are not available. However, in 1916, the area under cultivation in this regard amounted to 16,347 acres. The estimated population of the irrigation areas is about 5000.

(iii.) *Other Irrigation Settlements.* Irrigation settlements have been established at Curlwaa near Wentworth, and at Hay. These were in 1913 placed under the control of the Water Conservation and Irrigation Commission.

(a) *Curlwaa Irrigation Area.* The Curlwaa irrigation area embraces 10,600 acres, of which 1363 acres have been subdivided into 94 irrigable blocks. On 31st December, 1917, 85 blocks, comprising 1296 acres, had been taken up, in areas of  $1\frac{1}{2}$  to 37 acres. There are also 90 non-irrigated holdings of from  $\frac{1}{4}$  to 336 acres, comprising 7104 acres, of which 82 blocks, representing an area of 6958 acres, were in occupation on the above date. An area of 1290 acres has been reserved as a common. The balance of the area is made up of road and channel and other reserves. During 1916-17 approximately 1100 acres were under cultivation, the greater part being devoted to fruit, including oranges, peaches, apricots, nectarines, pears, grapes, sultanas and currants. The area planted to fruit was 776 acres, of which about 600 acres were in bearing. It has been

proved beyond doubt that the Curlwaa soil is eminently suited to the growth of citrus and other kinds of fruit, and some of the finest oranges grown in New South Wales are produced on this area.

The estimated weight of dried fruits produced on the Curlwaa area in the year 1916-17 was 7022 cwt., the principal yields being sultanas, 2581 cwt.; peaches, 1423 cwt.; currants, 1404 cwt. In the previous year the product was 5955 cwt.; in 1914-15 it was 3178 cwt.; in 1913-14, 5118 cwt.; and in 1912-13, 4247 cwt. The heaviest crops have been sultanas and currants. The value of the dried fruit production for the twelve months ending 30th June, 1917, is estimated at not less than £20,000; in addition to which the area produced fresh fruit, crops and other produce of the value of some thousands of pounds.

The pumping machinery consists of a suction-gas plant, supplying two engines of about 55 brake horse-power each, working two centrifugal pumps, with an average combined capacity of about 4600 gallons per minute. With eight pumpings during the 1916-17 season, 89,243,000 cubic feet of water were supplied. The length of the main channels is about 8 miles 55 chains. The land may be leased for periods not exceeding thirty years, the annual rent at present varying from 1s. to 10s. per acre. The rate for water is fixed from time to time by the Commission, and is at present, except in a few special cases, 20s. per acre per annum. Each lessee is entitled to receive a quantity of water equivalent to a depth of 30 inches per annum, limited to 4 inches in any one month.

(b) *Hay Irrigation Area.* The Hay irrigation area consists of about 4160 acres, and previous to 1913 was controlled by a Trust appointed in 1897. On 31st December, 1917, the area held and used for irrigation purposes was 1002 acres, in 105 blocks of from 3 to 34 acres. The term of lease is generally 30 years, and the annual rental from 5s. to 12s. per acre. In addition, there was at that date an area of 2040 acres of non-irrigated land taken up in 43 blocks as permissive occupancies. The water rate is fixed from time to time, and during 1917 was £1 per acre per annum. The pumping machinery is of similar type to that at Curlwaa, the capacity of the pumps being 4000 gallons per minute. During 1916-17 season 90,182,240 cubic feet of water were pumped. Dairying is the principal industry; the cultivation of fruit is very limited.

(iv.) *Projected Irrigation Schemes.* The Water Conservation and Irrigation Commission are investigating schemes for storing water for the purpose of irrigation on the Darling, Lachlan, Macquarie, Hunter, Namoi, Peel and Warragamba Rivers.

(a) *Murray River.* An investigation is being made into the manner in which the New South Wales proportion of the Murray waters can be most profitably applied, but as yet no conclusion has been reached.

(b) *Darling River.* A preliminary investigation has been made of the Darling River, which shews that the most suitable site for the storage of large volumes of water is in the lake system to the east of the river, comprising Lakes Boolaboolka, Ratcatcher, and Victoria, and a number of other lakes (seventeen in all) fed from the river in high floods from the Talyawalka Creek, which takes off from the river about 260 miles above Menindie. Further investigation is required to determine the area which can be commanded from this storage. The question of establishing a small irrigation area, by direct pumping from the river, in the vicinity of Menindie, has also received attention.

(c) *Lachlan River.* The construction of a storage reservoir at Wyangala, below the confluence of the Abercrombie River, has been investigated with the intention of affording water in the river channel for pastoral purposes and for the irrigation of small areas along the river banks by pumping. A proposal is also being investigated for the increase of the storage in Lake Cudgellico, which is fed from the Lachlan River, and for the pumping thence of the water for the irrigation of an area of about 5000 acres adjacent to the lake. The possibility of regulating the amount of water lost in numerous effluent creeks is being considered, so that the best use may be made of the Lachlan River water.

(d) *Macquarie River.* The construction of a storage reservoir has been proposed on the river at Burrendong, below the confluence of the Cudgegong River, for the purpose of affording water by gravitation for the irrigation of certain lands to the west of Narromine. Smaller schemes for the construction of storage dams at White Rock, and on Campbell's River, at Bathurst, have also received consideration. The run-off from this catchment is somewhat uncertain, and before giving consideration to the construction of any State irrigation scheme, further investigation is necessary.

(e) *Hunter, Namoi and Peel Rivers.* Pumping by private irrigators under the Water Act is increasing at such a rapid rate that in the case of some of the rivers, such as the Peel and the Hunter, it will not be possible to supply the pumps in dry seasons until head storage works have been constructed. Surveys have been completed for storage dams on the Hunter and Peel Rivers and for a dam on the Namoi River above Manilla.

(f) *Warragamba River.* The Warragamba project will serve the dual purpose of amplifying the Sydney Water Supply and irrigating the best lands in the Nepean Valley. The rate of increase in the population of the metropolitan area during recent years, if maintained, will in a short space of time cause the consumption of water to overtake the capacity of the present catchment area of the Sydney water supply, and the next available source of supply will then be the Warragamba River, a scheme for the storage of water from which has been prepared. It is proposed to construct a large storage dam capable of supplying about 200,000,000 gallons daily for water supply, irrigation and trade purposes, and for compensation water. Surveys have been made and details are being prepared of this scheme, which has been submitted to the Public Works Committee.

(v.) *Water Rights.* The Water Act 1912 consolidates the Acts relating to Water Rights, Water and Drainage, Drainage Promotion and Artesian Wells. Part II. of the Act vests in the Crown the right to the use, flow and control of the water in all rivers and lakes which flow through or past, or are situate within the land of two or more occupiers. It abolishes "riparian rights," and establishes a system of licenses for works of water conservation, irrigation, and drainage. Prior to the passing of the Act relating to water rights, such works on creeks and rivers, constructed by private individuals, were liable to destruction by any person who considered their existence opposed to his interests. Now, under the Water Act, a severe sentence of imprisonment may be imposed in respect of interference with any work for which a license has been granted. The security thus provided has stimulated the construction of a better class of works for irrigation and the other purposes mentioned. Notwithstanding the generally favourable season experienced throughout the State, which lessened the necessity for irrigation during the year ended 31st December, 1917, 95 applications were made for new licenses, and 62 for the renewal of existing licenses, and at the end of the year 1206 licenses were in force.

(vi.) *Water Trusts and Bore Trusts.* Part III. of the Water Act 1912 provides for the supply of water either for irrigation, stock, or domestic purposes, and for drainage, the liabilities on which are repaid to the Crown, with interest spread over a period of years, and the works are administered by trustees appointed from among the beneficiaries under the Act; except in the case of trusts in the Western Division, where the Western Land Board is appointed as trustee. For the supply of water, trusts have been constituted in connection with (a) seventy-six artesian wells; (b) eight schemes for the improvement of natural off-takes of effluent channels, for the purpose of diverting supplies from the main rivers; (c) in four instances for the construction of weirs across stream channels (one has since been dissolved); and (d) two pumping schemes, one from natural watercourses, and one from a well. The total area included within these trusts amounts to 6,809,537 acres.

3. *Victoria.*—(i.) *Classification of Works.* The Water Conservation Works in Victoria divide themselves into irrigation works proper, and those providing mainly a domestic supply, such as the works for the supply of Melbourne, controlled by the Melbourne and Metropolitan Board of Works; the Coliban, Wonthaggi, Broken River, Kerang Lakes, Naval Base and Mornington Peninsula, and Mallee Supply Works, administered by the State Rivers and Water Supply Commission, and other works for domestic supply controlled by Water Works Trusts or Municipal Corporations. With the exception of the works administered by the Commission, particulars as to these works will be found in the section on "Local Government" in this volume.

(ii.) *Works Controlled by the Commission.* All the irrigation schemes (with the exception of that of the First Mildura Irrigation and Water Supply Trust), and the more important domestic and stock water-supply works in rural districts, are vested in and controlled by the State Rivers and Water Supply Commission, a body composed of three members, which was created by the Water Act 1905, now incorporated in the Water Act 1915.

(a) *Irrigation Schemes.* This division comprises the schemes constructed and under construction for the supply of water to some seventeen irrigation districts. Up to 1906 these schemes were controlled by local Trusts, which had obtained the moneys for their construction on loans from the State. By the Water Act 1905 all local control was abolished except in the case of Mildura, and the districts were transferred to the State Rivers and Water Supply Commission. Since that date the Government has adopted a vigorous irrigation policy, and the capital expenditure at 30th June, 1917, on water supply in the irrigation and water supply districts under the control of the Commission, and at Mildura, was £3,980,000. The irrigation works draw their supplies mainly from headworks constructed on the Murray, Goulburn, and Loddon Rivers. The cost of these headworks, which now stands at £1,123,000, is not debited to any particular districts, but is borne by the State. The extent of land under irrigated culture, for all kinds of crop, is 258,000 acres, which, notwithstanding the abnormally wet season, was within 3000 acres of the average area irrigated in the previous six years.

The following particulars of the principal schemes will be of interest, and will convey some idea of the extent to which the one-time arid northern portion of this State is now insured against droughts like that of 1902, when the combined capacities of its storages for irrigation by gravitation were only 75,000 acre feet, and of its pumping plants, 400 acre feet per day.

*Goulburn Scheme.* The Goulburn River Gravitation Scheme (see map on page 553) is the largest of Victoria's irrigation enterprises. It serves, either for irrigation or domestic and stock purposes, 850,000 acres of land in the valleys of the Goulburn, Campaspe and Loddon Rivers. The present headwork of the system is a diversion weir on the Goulburn River, near Nagambie. It is constructed of concrete masonry, with 21 flood gates, which raise the up-stream water level 10 feet above the concrete crest. These gates are lowered, during high stages of river flow, to provide a clear waterway for the discharge of floods. The weir has a total length, including channel regulators, of 925 feet, and a height of 50 feet. The water is diverted by two main channels, the eastern carrying 330 cubic feet per second (660 acre feet per day) a distance of 33 miles to the country north of the Broken River, while the western, which has a capacity of 1700 cusecs,\* and a length of 23 miles, is used to feed distributaries of the Rodney District and to fill Waranga Reservoir, the present principal storage basin of the scheme. This reservoir, formed by an earthen embankment  $4\frac{1}{2}$  miles long across a natural depression, covers an area of 19 square miles to an average depth of 16 feet, and stores 197,000 acre feet. Works now in progress will raise the full supply level of this reservoir by ten feet, and increase the storage capacity to 330,000 acre feet. Two main channels issue from this reservoir, the Waranga-Rodney, of 250 cusecs\* capacity, which feeds Rodney distri-

\* Cusecs=Cubic feet per second.

butary channels, and the Waranga-Campaspe-Serpentine, which leaves the reservoir with a capacity of 1000 cusecs, and ends at the Serpentine Creek, 92 miles westward, with a capacity of 200 cusecs. The total length of distributary channels is 1600 miles.

The portion of the State served by this system comprises 19,000 acres east of the Goulburn, 564,000 acres between the Goulburn and the Campaspe, and 267,000 acres between the Campaspe and the Loddon. These areas include the irrigated Closer Settlements at Shepparton, Tongala, Rochester and Dingee (see "Closer Settlement in Irrigation Districts," page 276) in which annual water rights are allotted of not less than one acre foot of water to each acre of irrigable land. They include also the districts formerly controlled by the Rodney and Tragowel Plains Irrigation Trusts, in which districts, generally, the holdings are larger than in Closer Settlement areas. The water rights in these districts are, for lands under intense culture, one acre foot of water to each irrigable acre, and for other irrigable lands, one acre foot to four irrigable acres in the former district, and one to five in the latter. The balance of the area, including Deakin district, while not subject to a compulsory irrigation charge, is provided with a domestic and stock supply, and water is sold for occasional irrigation on application. The amount of the compulsory charge for irrigation water allotted as a "right" is at present 6s. per acre foot in the two districts—Tragowel Plains and Dingee—farthest removed from the sources of supply, and 5s. per acre foot elsewhere. With a view of meeting the increasing demand for water in dry seasons, and providing an irrigation supply for other suitable lands, the Commission is constructing a storage reservoir on the Upper Goulburn, just below its junction with the Delatite River, at what is known as the Sugarloaf site. The dam, which is 2550 feet in length, consists of a diaphragm wall of reinforced concrete, built from bed rock (in some places 75 feet below natural surface) to crest level 135 feet above the river bed; a wall of clayey material on the upstream side of the diaphragm; and supporting masses of rock. This reservoir will submerge an area of 7600 acres, and store about 300,000 acre feet of water, bringing the total capacity of the Goulburn storages to 630,000 acre feet. The foundations of the Sugarloaf structure will permit of the dam being raised, if necessary, to a height of 190 feet above the river bed. This would add 8600 acres to the area submerged, and would increase the storage capacity from 300,000 to 900,000 acre feet.

*Loddon River Scheme.* This also is wholly a gravitation system. The headwork is a regulating weir on the Loddon at Laanecoorie, about 22 miles westerly from Bendigo. This weir is constructed of concrete masonry with "Chaubart" automatic floodgates five feet high for a length of 320 feet, combined with an earthen embankment, the length over all being 940 feet. Its storage capacity is 14,000 acre feet. Other works of the scheme are timber diversion weirs at Serpentine and Kinypanial, 80 and 120 miles downstream respectively, also 160 miles of channels (taken over from several irrigation Trusts in the Boort district) which supply an area of 74,000 acres for domestic and stock purposes and partial irrigation.

*Murray River Schemes.* These comprise both gravitation and pumping schemes. The only wholly gravitation system is that known as the Kow Swamp scheme, which supplies the Kerang irrigation district of some 85,000 acres. The off-take is at Torrumbarry headworks, from which the Gunbower channel diverts water, when the Murray river is five feet above summer level, to the Kow Swamp storage, a natural depression improved so as to hold a volume of 41,000 acre feet. From this reservoir the water is distributed by the Macorna channel (40 miles in length) and about 200 miles of distributaries.

*The Cohuna, Gannawarra, Koondrook and Swan Hill Schemes* are combined gravitation and pumping schemes. The Cohuna-Gannawarra plant consists of two 36 inch and four 39 inch centrifugal pumps—total capacity 280 cusecs; those at Koondrook and Swan Hill, each of 100 cusecs capacity, consist each of two 39 inch centrifugal pumps. The pumped supplies are supplemented at varying stages of river level by the gravitation water.

*The Cohuna, Koondrook and Swan Hill Districts*, comprising 106,000 acres, embrace the irrigated Closer Settlements of the same names. In these districts and that of Gannawarra (comprising 44,000 acres) the quantity of water allotted as a "right" is one acre foot per irrigable acre. The compulsory charge is at present 5s. per acre foot of such water right. In Kerang district—not under a compulsory irrigation charge—water is sold to irrigators on application at a charge not exceeding 3s. per acre foot of water supplied.

*The Nyah Irrigation Area* was occupied in 1894 under village settlement conditions, settlers being allowed up to 50 acres each. Individual attempts at irrigation having proved unsuccessful, a Government scheme was prepared for the whole settlement. A number of settlers surrendered portions of their holdings, which were too large for effective working, and these portions, with adjacent Crown lands, were re-subdivided and made available, under the Murray Settlements Act 1907, on easy terms. Water is diverted from the Murray by a high lift pumping plant—capacity 25 cusecs—consisting of two coupled 24 inch turbine centrifugal pumps. The settlement now contains 141 holdings, of an average area of 20 acres, of which 128 are settled. Water rights are apportioned to these holdings on the basis of  $2\frac{1}{2}$  acre feet of water for each irrigable acre, and the compulsory charge is at present 14s. per acre foot of such water rights. The land is devoted mainly to vineyards and orchards, and the settlers, taken as a whole, are making good progress.

*The Merbein Irrigation Area* (formerly known as White Cliffs) comprises 6200 acres of what, eight years ago, were Crown lands. This settlement now contains 239 holdings, averaging 26 acres each, so highly improved as to sell, as orchard properties, at prices up to £200 per acre. The water is pumped from the Murray by a plant of four turbine centrifugal pumps—lift 96 feet, capacity 50 cusecs—and one 36 inch high lift centrifugal pump, capacity 50 cusecs. The land settlement conditions and water rights apportioned are the same as at Nyah, but the compulsory charge is at present 15s. per acre foot. Last year's production at Merbein comprised some 2600 tons of dried fruits, 4000 tons of distillery grapes, and 6600 cases of fresh fruits, of a total value of £185,000, an average of about £30 per acre occupied.

*Werribee River Schemes.—Bacchus Marsh.* The headwork of this gravitation scheme is a reservoir of 15,000 acre feet capacity on Pyke's Creek, a tributary of the Werribee, the in-take from the creek catchment being supplemented by a tunnel through a dividing spur, which taps the Werribee River near Ballan. The dam, 1000 feet in length and 100 feet in height, is built of earth, with dwarf concrete core. The area of the district is 6600 acres—half of which is irrigable—and includes some of the richest lucerne land in the State. The annual water right is one acre foot per irrigable acre, and the present compulsory charge is £1 per acre foot of such right. The higher portion of the district receives a supply for domestic and stock purposes.

*Werribee.* This is another gravitation scheme on the same river. The headwork is a reservoir at Melton, immediately below the Bacchus Marsh district. The dam is of earth, with dwarf concrete core. Its length is 600 feet, height 100 feet, and the storage capacity of the reservoir 17,000 acre feet. A diversion weir at Werribee, 71 miles downstream from the reservoir, a main channel therefrom, and the usual distributaries and appurtenant works, complete the scheme. The irrigation district comprises some 7000 acres of first-class land, being the irrigable portion of the Werribee Closer Settlement Estate, which is within 20 miles southwesterly of Melbourne. Most of this land is settled, and the balance is held for discharged soldiers. The water right allotment is one acre foot per irrigable acre, and the charge at present is 10s. per acre foot. The non-irrigable portion of the estate, containing about 13,000 acres, is supplied with water for domestic and stock purposes.

(b) *Domestic and Stock Schemes.* The second division takes into account the schemes constructed and under construction for the supply of water for domestic and stock purposes, the capital expenditure on which at 30th June, 1917, was £4,951,000.

The area of country lands artificially supplied with water for these purposes is nearly 21,000 square miles. The number of towns supplied, exclusive of the City of Melbourne and its suburbs, is 154, serving an estimated population of 293,000. In addition to the Commission's districts, some large areas are still administered by local authorities.

The principal scheme in this division is that known as the *Wimmera-Mallee Gravitation Channel System*. This comprehensive scheme of works will compare favourably, it is believed, with any similar individual scheme, for domestic and stock service, in any part of the world. The main supply is drawn from three reservoirs in the catchment area of the Wimmera River, at the foot of the Grampians Ranges, viz.:—Lake Lonsdale, Wartook, and Fyans Lake. A fourth—Taylor's Lake—now under construction, is nearing completion. The reservoirs in use have a combined storage capacity of 86,000 acre feet. The completion of the works in progress, and other minor works, will bring this total to 122,000 acre feet. The water is conveyed, partly by natural water-courses, but chiefly by artificial channels, aggregating over 3600 miles in length, over farming districts comprising about 8500 square miles, approximately one-tenth of the whole State (see map on page 554).

Another scheme in this division which calls for mention here is the *Naval Base and Mornington Peninsula Scheme*. This comprehensive scheme—prepared at the request of the Naval Authorities—is for the supply of water to the Flinders Naval Base, and for the service of fifteen townships en route, including Berwick, Beaconsfield, Pakenham, Aspendale, Chelsea, Carrum, Frankston, Mornington, and Hastings. An ample supply of water is obtainable from the headwaters of the Bunyip River, which drains some 30 square miles of forest country above the point of off-take. The works are already well advanced, those portions which more directly affect the Naval Base being expedited so as to give water to that important area before the end of the present year.

(iii). *Mildura*. The creation of an irrigation colony at Mildura was the outcome of a visit by Mr. Deakin to California in 1885, when Messrs. Chaffey Bros. were invited to visit Victoria, with the object of founding a similar settlement to those which they had been largely instrumental in establishing in California.

Active operations were commenced in 1887, since which date marvellous progress has been made, instanced in the fact that, originally used as a sheep run and carrying one sheep to every thirty acres, the dried fruit harvested from 12,000 acres in 1916 was valued at £683,000 gross.

Water is pumped and supplied under Act of Parliament by the first Mildura Irrigation Trust from the river Murray by two pumping stations, viz.:—(1) into a billabong, and thence to pumps lifting to various levels, and (2) to a comparatively small area adjacent to the town.

The length of the Trust's main and subsidiary channels is 280 miles. For the year ending 30th June, 1917, the Trust's receipts aggregated £29,167, and its expenditure £22,654. For the same period the number of water acres supplied was 29,966.

Loans (balance) advanced to the Trust by the Government for the purpose of improving the plants and channels, etc., amounted at 30th June, 1917, to £82,595, exclusive of the sum of £10,797 (balance) arrears of interest.

The area of the settlement is 45,000 acres, of which 12,000 acres are under intense culture, vines predominating.

4. *Queensland*.—The main irrigation works in Queensland are as follows:—(a) those at Ayr, which utilise the waters of the Burdekin River, and shallow wells on its banks; (b) those at Bingera, near Bundaberg, which utilise water pumped from the Burnett River just above the point of meeting of the salt and fresh waters, and (c) those at Fairymead, which utilise water pumped from a number of shallow spear wells sunk on the alluvial flats on the north side of the Burnett River and about six miles from Bundaberg. There were 741 irrigators in the State in 1916, chiefly farmers and graziers, and the area irrigated was 10,886 acres.

5. *South Australia.*—(i.) *The Renmark Irrigation Trust.* The Renmark Irrigation Trust was established in 1893 on similar lines to Mildura, but on a smaller scale. The area of settlement is 21,000 acres, the area under irrigation being 5270 acres. There are also 1000 acres under crop for hay. The dried fruit pack for 1917 was 2350 tons, green fruit 2300 tons, and the gross value of the production for that year was £126,000. The population of the town and settlement is 3000. The chief products are sultanas, currants, raisins, oranges, apricots, peaches, pears, olive oil, and grape spirit. There are two distilleries for the manufacture of grape spirit.

(ii.) *Other Waterworks.* A number of country water works are under the control of the Public Works Department. As, however, they are not irrigation works properly so called, but are used for supplying water for domestic purposes, etc., to several towns, no further reference will be made to them in this chapter. (See Section XXVI., *Local Government.*)

(iii.) *Area under Irrigation.* Until 1910, irrigation in South Australia, with the exception of the schemes already mentioned, made little, if any, progress; but in that year an Irrigation and Reclamation Works Department was created, and the preparation of land for irrigation settlements has since been vigorously pursued.

The functions of the Department cover (a) the reclamation of the swamp lands along the lower reaches of the Murray, which are watered by gravitation, and (b) the preparation of the sandy loam highlands for intense culture, the water, after being pumped from the river, being distributed by concrete channels. A number of the small settlements along the river, originally established as village settlements, were taken over by the Department, and the areas available for reticulation extended and offered for occupation. These include Waikerie, with an irrigable area of 2515 acres, in addition to 4372 acres of "dry" land; Kingston with 415 acres of irrigable and 3096 of "dry" land; and Moorook with 2950 acres, of which 1200 acres can be irrigated. The new areas commenced by the Department were Berri, where 3043 acres of irrigable land and 2364 acres of "dry" land have been allotted to 160 settlers. Further pumping plants have been installed, which will enable this settlement to be extended to 9000 acres of irrigable land and 11,000 acres of "dry" land. The adjoining area of Cobdogla, the preparatory survey of which has been completed, contains approximately 30,000 acres of first-class land suitable for intense culture, in addition to 111,000 acres of "dry" land. The first section of this area, comprising about 2000 acres, which can be watered from a lift of about 20 feet, is now available for allotment. When completed, this settlement will be supplied from four distinct pumping plants, two on the River Murray at different points, and two on Lake Bonney at the north and south ends respectively. This lake is fed from the river by means of Chambers' Creek, and comprises an area of 4000 acres. At Cadell an area of 2700 acres has been acquired, 1200 acres of which are first-class irrigable land; this is now being prepared by the Department for settlement. The reclaimed swamps, which have already been completed and allotted, comprise 3600 acres, while other swamp lands of about 3200 acres are in course of reclamation.

A recent innovation has been the preparation of joint schemes of reclaimed and irrigable land, the swamps being reclaimed and the adjoining sandy loam highlands channelled, thus enabling the adoption of dairying, fodder growing, and stock raising in conjunction with horticulture. The areas comprise, Mypolonga, 1700 acres of reclaimed land, 1254 acres of irrigable, and 1481 acres of "dry" land; Wall, 619 acres of reclaimed land, 160 acres of irrigable and 208 acres of "dry" land; Pompoota, 560 acres of reclaimed land, 250 acres of irrigable land, and 3277 acres of "dry" land; Jervois, 990 acres of reclaimed land, 290 acres of irrigable land, and 260 acres of "dry" land; Swanport, 116 acres of reclaimed and a similar area of irrigable land; Neeta, 560 acres of reclaimed, 1820 acres of irrigable, and 2348 acres of "dry" land. Mypolonga and Wall have been allotted, the latter to returned soldiers, and Pompoota is being utilised as a training farm for returned soldiers. The other areas have yet to be allotted for settlement. The reclaimed lands consist of peaty soils composed of rich river silt, and are eminently

suited for the growth of lucérne and other fodders, onions, potatoes, etc. The soils of the irrigable lands have already proved their suitability for the production of peaches, apricots, nectarines, oranges, lemons, figs, and grapes.

All lands are allotted under perpetual lease, and blocks are surveyed into areas varying up to 50 acres of irrigable or reclaimed land. No lessee is permitted to hold more than 50 acres of irrigable or reclaimed land or of both irrigable and reclaimed, except that in the case of a partnership 50 acres may be allotted for each member of the partnership up to a maximum of 150 acres. In addition, areas of non-irrigable land are allotted to lessees of irrigation and reclaimed blocks for dry farming. The rentals of the blocks are fixed by the Land Board immediately prior to the land being offered for application. For the reclaimed land an amount is charged sufficient to cover interest on cost of land and reclamation, while for the irrigable land the rent is based on the unimproved value of Crown lands, or to cover interest on cost of repurchased lands.

On the irrigable land, the water rate has been fixed at 30s. per acre per annum for the first four years, after which an amount will be charged sufficient to cover actual cost of supplying water, and interest on pumping plant, channels, etc. On the reclaimed lands an amount is charged to meet annual management, drainage, and maintenance expenses. A sliding scale covers the rent on all land, and water rates on the irrigable land for the first four years, *i.e.*—first year, one-quarter of the rent and water rate; second year, one-half; third, three-quarters; fourth and afterwards, full amount per acre. On the irrigable lands, each lessee is entitled for the water rate to 24 acre inches per annum, supplied in six irrigations; special irrigations and domestic supplies are supplied at times other than during the general irrigations, at a nominal cost. On the reclaimed lands, water is supplied regularly by reticulation from the river.

The Department assists settlers by fencing, clearing, grading and constructing irrigation channels and tanks. Such improvements are undertaken up to a value not exceeding £15 per acre of the irrigable area in each lessee's block, but before the work is commenced a deposit must be paid equal to 15% of the Department's estimated value of such improvements. The total cost of the work, less deposit, is treated as a loan to the lessee, and is repayable in twenty equal annual instalments after the expiration of five years, or at any shorter period if desired by the lessee; current rate of interest being charged. Any lessee is permitted to accept the contract for carrying out his own improvements according to the specifications and estimates of the Department, up to the maximum amount per acre, as mentioned above. Advances can be obtained from the Advances to Settlers Board for the purchase of stock, discharging mortgages, erecting permanent buildings, and other improvements, the first £400 being advanced on the fair estimated aggregate value of the settler's lease, and any improvements already made on the holding, and those in course of being made thereon. Any loan beyond £400 would not exceed 15s. in the £ of the fair estimated value of the improvements already made.

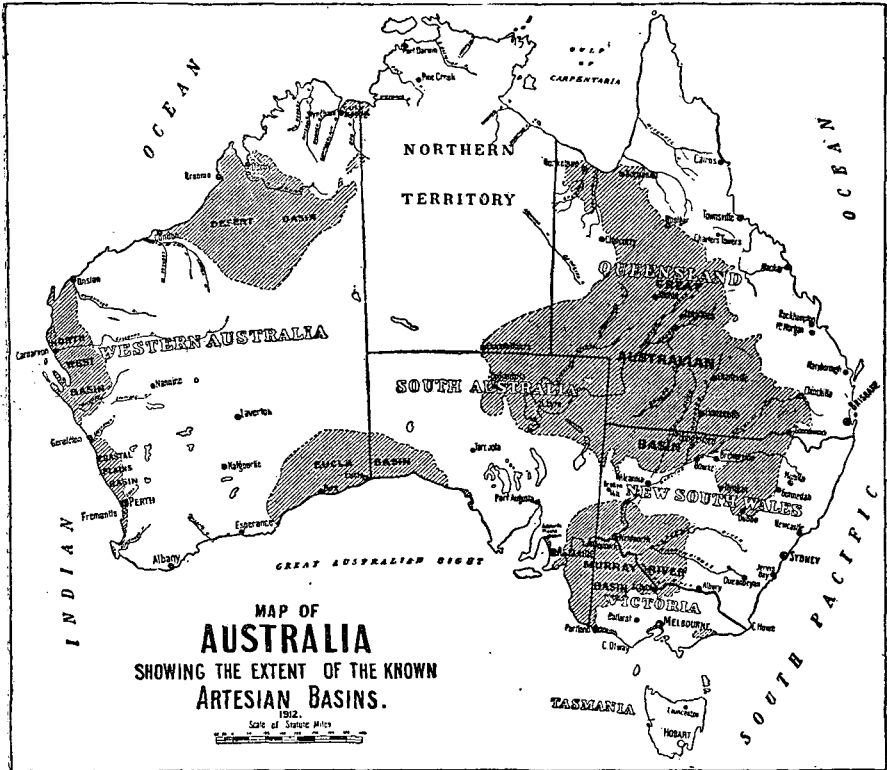

In the section dealing with Closer Settlement (page 271) the subject of irrigation areas in South Australia has already been referred to.

**6. Western Australia.**—An Irrigation Act has been brought into force providing for the constitution of irrigation districts. At Harvey the works for irrigating about 4000 acres devoted to fruit growing, principally oranges, were completed, and formally opened on the 21st June, 1916. A scheme is now in preparation for irrigating a further area of about 4600 acres in the same district.

Numerous small private irrigation schemes are in full operation on many of the south-west rivers in connection with fruit, fodder, and potato growing.

**7. Murray Waters.**—The negotiations which took place prior to the passing of the River Murray Waters Act as to the relative State rights of New South Wales, Victoria and South Australia to the waters, are given in detail in previous issues of this book. (Year Book No. 9, page 537.)

MAP SHEWING THE POSITION AND EXTENT OF THE "AUSTRALIAN ARTESIAN BASINS."

This map was prepared by the Interstate Conference on Artesian Water, held in Sydney during May, 1912. It contains the latest facts relative to the various artesian basins of the Australian continent. Of these basins the most important is the Great Australian Basin, which is about 569,000 square miles in extent, viz.:—About 376,000 square miles in Queensland, 90,000 square miles in South Australia, 83,000 square miles in New South Wales, and 20,000 square miles in the Northern Territory. The Murray River Basin extends over South-Western New South Wales, North-Western Victoria, and South-Eastern South Australia. The Western Australian Basins fall naturally within five groups, viz.:—The Eucla Basin, the Coastal Plains Basin, the North-West Basin, the Desert Basin, and the Gulf Basin. (See also pages 532 to 539.)

VICTORIA.  
STATE RIVERS AND WATER SUPPLY COMMISSION.

# GOULBURN IRRIGATION SYSTEM

SCALE OF MILES.  
0 5 10 15 20

On the 31st January, 1917, the River Murray Waters Act was brought into operation. The principal provisions of this Act are that a storage of one million acre feet is to be created by the construction of a dam on the Upper Murray above Albury. This work is to be constructed by New South Wales and Victoria conjointly. A joint investigation has been in progress by the two States interested for some years past, with a view to determining the most suitable site for the construction of this large work, but although a number of sites have been tested, no determination has yet been arrived at.

From the storage dam to Echuca, the river will not be locked, but from Echuca to Blanchetown in South Australia, 26 weirs and locks will be constructed, affording a navigable depth at all times for vessels drawing 5 feet of water. The weirs and locks above Wentworth will be constructed by Victoria and New South Wales jointly, and below Wentworth by South Australia. The Act also provides for the construction of locks and weirs in the Murrumbidgee River from its junction with the Murray River to Hay, or alternatively, for an equivalent expenditure of £540,000 upon locking the Darling River from its junction with the Murray upwards.

A system of storage is to be provided in Lake Victoria, to be controlled by South Australia.

The total expenditure involved by the construction of the works covered by the Act is estimated at £4,663,000, of which the Commonwealth Government will contribute £1,000,000, and the three States interested, the balance in equal shares.

The effect of constructing the River Murray storage would be to insure at all times sufficient flow below Albury to permit of diversions for irrigation, and stock and domestic supplies, and also to make good the losses in the river due to seepage, evaporation, and lockages. The Act provides that, subject to certain conditions, New South Wales and Victoria shall share the regulated flow of the river at Albury, and shall each have the full use of all the tributaries of the River Murray within its territory below Albury, with the right to divert, store and use the flows thereof. It is estimated that the New South Wales regulated river flow after the construction of the Upper Murray storage will amount to at least 120,000 acre feet per month at Albury during the irrigation season, except in a period of phenomenal drought, such as 1902 and 1903. The River Murray Commission has been constituted, and is making investigations regarding works to be carried out.

## SECTION XV.

## COMMERCE.

## § 1. Introductory.

NOTE.—From the 1st July, 1914, the Trade Year, which was formerly the Calendar Year, was altered to coincide with the Fiscal Year (July to June).

1. **Constitutional Powers of the Commonwealth in regard to Commerce.**—The powers vested in the Commonwealth Parliament by the Commonwealth Constitution Act with respect to oversea trade and commerce will be found on page 23 (sub-section 51 (i.) and pp. 29 to 31 (sub-sections 86-95) of this volume.

## § 2. Commonwealth Legislation affecting Foreign Trade.

1. **Customs Act 1901 (No. 6 of 1901).**—"An Act relating to the Customs," assented to on the 3rd October, 1901, came into operation by proclamation on the 4th October, 1901. This provided for the establishment of the necessary administrative machinery for all matters pertaining to the customs, and prescribed, *inter alia*, the manner in which customs duties shall be computed and paid. It did not, however, determine the rates thereof.

During the interval between the inception of the Commonwealth, viz., on 1st January, 1901, and the coming into operation of the Customs Act 1901, the Customs Acts of the several States were administered by the Executive Government of the Commonwealth, under section 86 of the Constitution.

2. **Customs Tariff Act 1902 (No. 14 of 1902).**—The first Commonwealth Customs Tariff imposing uniform rates of customs duty in all the States was introduced in the House of Representatives on the 8th October, 1901. "An Act relating to Duties of Customs," assented to on the 16th September, 1902, made provision that uniform duties of customs specified in the tariff schedule should be imposed from the 8th October, 1901. From this date trade between the States became free, with, however, the exception, under section 95 of the Constitution Act, of the right of Western Australia to levy duty on the goods from other States for five years. [Repealed by the Customs Tariff Act 1908 (No. 7 of 1908).]

3. **Sea Carriage of Goods Act (No. 14 of 1904).**—"An Act relating to the Sea Carriage of Goods," assented to on the 15th December, 1904, to commence on the 1st January, 1905, defines the responsibility of shipowners, charterers, masters, or agents in regard to goods carried.

4. **Secret Commission Act 1905 (No. 10 of 1905).**—"An Act relating to Secret Commissions, Rebates, and Profits," assented to on the 16th November, 1905, provides that—"Any person who, without the full knowledge and consent of the principals directly or indirectly (a) being an agent of the principal, accepts or obtains, or agrees or offers to accept or obtain, from any person, for himself, or for any person other than the principal; or (b) gives or agrees to give or offers to the agent of a principal, or to any person at the request of an agent of the principal, any gift or consideration as an inducement or reward for any act done or to be done, or any forbearance observed or to be observed, or

any favour or disfavour shewn or to be shewn in relation to the principal's affairs or business or on the principal's behalf, or for obtaining or having obtained, or aiding or having aided to obtain for any person an agency or contract for or with the principal, shall be guilty of an indictable offence."

**5. Commerce (Trade Descriptions) Act 1905 (No. 16 of 1905).**—"An Act relating to Commerce with other Countries," assented to on the 8th December, 1905, and brought into operation by proclamation on the 8th June, 1906, gives power to compel the placing of a proper description on certain prescribed goods, or on packages containing the same, being imports or exports of the Commonwealth.

**6. Australian Industries Preservation Act 1906 (No. 9 of 1906).**—"An Act for the Preservation of Australian Industries and for the Repression of Destructive Monopolies," assented to 24th September, 1906, provides that any person or any corporation making or engaging or continuing in any combination "with intent to restrain trade or commerce to the detriment of the public or with intent to destroy or injure by means of unfair competition any Australian industry the preservation of which is advantageous to the Commonwealth, having due regard to the interests of producers, workers, or consumers," or any person or corporation monopolising or attempting or conspiring to monopolise any part of the trade of the Commonwealth with intent to control, to the detriment of the public, the supply or price of any service, merchandise, or commodity, is guilty of an offence. (Amended, see Acts No. 5 of 1908 and No. 26 of 1909-1910.)

**7. Customs Tariff 1906 (No. 14 of 1906).**—"An Act relating to Duties of Customs" amended the Customs Tariff of 1902 in relation to the duties on harvesters and agricultural implements and machinery and prescribed the prices which were not to be exceeded of Australian harvesters and drills delivered to the purchaser at the railway station or port nearest to the factory where they are made. [Repealed by Customs Tariff Act 1908 (No. 7 of 1908).]

**8. Customs Tariff (South African Preference) 1906 (No. 17 of 1906).**—"An Act relating to Preferential Duties of Customs on certain goods the produce or manufacture of the British Colonies or Protectorates in South Africa which are included within the South African Customs Union," assented to 12th October, 1906, to operate from 1st October, 1906, provides for special preferential rates of duty on certain goods imported from and being the produce of any of the Colonies or Protectorates included within the South African Customs Union.

**9. Australian Industries Preservation Act 1907 (No. 5 of 1908).**—"An Act to amend the Australian Industries Preservation Act 1907," assented to 14th April, 1908, provides additional machinery for procuring evidence of offences against the principal Act.

**10. Customs Tariff 1908 (No. 7 of 1908).**—"An Act relating to Duties of Customs," assented to 3rd June, 1908, repeals Section 5 of the Customs Tariff 1902 (No. 14 of 1902) and the schedule of that Act and the whole of the Customs Tariff 1906 (No. 14 of 1906) as from 8th August, 1907, and imposes new rates of Customs Duties. This Act provides preference rates of customs duties on certain "goods the produce or manufacture of the United Kingdom."

**11. Customs Tariff Amendment Act 1908 (No. 13 of 1908).**—"An Act to amend the Tariff Act of 1908," assented to 10th June, 1908. The purpose of this Act is merely to remove possible doubt as to the intention of the original Acts.

**12. Australian Industries Preservation Act 1909 (No. 26 of 1909).**—"An Act to amend the Australian Industries Preservation Acts 1906-1907" formally repeals Sections 5 and 8 of the parent Act, which were declared by the High Court to be *ultra vires*; also provides that, in relation to trade and commerce with other countries or among the States, the payment of rebates, or the refusal to sell, "either absolutely or except upon disadvantageous conditions," with the purpose of promoting exclusive dealing, shall be an offence.

13. **Customs (Interstate Accounts) Act 1910 (No. 9 of 1910).**—Repeals Sections 272 and 273 of the Customs Act 1901. These sections relate to the passing of dutiable goods from one State to another State of the Commonwealth, and their repeal was consequent on the termination of the book-keeping system of accounts between the Commonwealth Government and the Governments of the States, in favour of a system of payments based on population.

14. **Australian Industries Preservation Act 1910 (No. 29 of 1910).**—“An Act to amend the Australian Industries Preservation Act 1906-1909.” This Act removes from the principal Act the obligation to prove *intent* to restrain trade and detriment to the public.

15. **Customs Act 1910 (No. 36 of 1910).**—“An Act to amend the Customs Act 1901” gives the Customs control of all goods for export, the exportation of which is subject to compliance with any condition or restriction under any Act or regulation, extends the machinery provisions for the prevention of the importation or exportation of goods which are prohibited imports or exports respectively, amends the provisions for the payment of duty under protest, gives the Governor-General power to prescribe the nature, size, and material of the coverings for packages, and the maximum or minimum weight or quantity to be contained in any one package of goods imported or exported, or transported coastwise from one State to another; the condition of preparation or manufacture for export of any articles used for, or in the manufacture of, food or drink by man; the conditions as to purity, soundness, and freedom from disease to be conformed to by the goods for export.

16. **Customs Tariff 1910 (No. 39 of 1910).**—“An Act relating to Duties of Customs,” amends the Customs Tariff of 1908 by more explicit definition of certain tariff items, and by alteration of some rates of duty.

17. **Customs Tariff 1911 (No. 19 of 1911).**—“An Act relating to Duties of Customs,” amends the Customs Tariff 1908-10 by alteration of some rates of duty.

18. **Interstate Commission Act 1912 (No. 33 of 1912).**—In accordance with the provisions of the Commonwealth Constitution Act—Sections 101 to 104 (see page 31 *ante*)—an Act relating to the Interstate Commission was assented to on the 24th December, 1912. This Act provides for the appointment of the Commission, and cognate matters.

19. **Trading with the Enemy Act 1914 (No. 9 of 1914).**—“An Act relating to the control of trade during the war with Germany and Austria-Hungary.” This Act was amended by Act No. 17 of 1914.

20. **Customs Act 1914 (No. 19 of 1914).**—Amends the Customs Act 1901-10 by extending the powers of the Governor-General to prohibit the exportation of goods in time of war.

21. **The Income Tax Assessment Act 1915 (No. 34 of 1915) and Amendment thereto (No. 47 of 1915).**—Provide that “In the case of a person selling goods in Australia on account of a person not resident in Australia, or on account of a company not registered in Australia, the principal shall be deemed to have derived from such sale a taxable income equal to five pounds per cent. upon the price at which the goods were sold. The person selling the goods shall be assessable on the taxable income as the agent for the principal, and shall be personally liable for the payment of the tax to the extent of the tax payable on goods sold by him after the 30th June, 1915. Goods shall be deemed to

be sold in Australia on account of a person not resident in Australia, if any person in Australia receives a commission in respect of the sale of the goods or is paid a salary for obtaining orders for or for influencing the sale of the goods."

**22. Customs Tariff Validation Act (No. 6 of 1917).**—"An Act to provide for the validation of—(1) Collections of Customs duties under tariff proposals introduced into the House of Representatives on the 3rd December, 1914; (2) the remission of Customs duty on wheat as from the 12th December, 1914; (3) the remission of Customs duty on oats as from the 27th February, 1915; and (4) the restoration of the Customs duties on wheat and oats from the 12th November, 1915."

**23. Apple Bounty Act (No. 21 of 1918).**—This Act appropriates from the Consolidated Revenue Fund the sum of £12,000, for the payment, to the grower, of a bounty of 17d. per pound upon the export of apples grown and evaporated in Australia under certain prescribed conditions, and sold to the Imperial Government for delivery between the 1st April and 31st August, 1918.

### § 3. Regulation of Trade during the War.

**1. Authority for.**—By the Customs Act 1901-1910 it is enacted that the Governor-General may, by proclamation, prohibit the exportation or transfer from any State to any other State of the Commonwealth of any goods, being arms, explosives, military stores or naval stores, or being goods which, in his opinion, are capable of being used as or in the manufacture of arms, explosives, military stores, or for any purpose of war; and, by the Defence Act 1903-1912, it is enacted that the Governor-General may, subject to the provisions of that Act, do all things deemed by him to be desirable for the efficient defence and protection of the Commonwealth or of any State.

By virtue of the above, proclamations prohibiting or controlling exports from the Commonwealth have been issued from time to time as circumstances appeared to warrant.

**2. Luxuries Board.**—With a view to restricting unnecessary private expenditure and so increasing the ability of the people to contribute to war loans, a Luxuries Board was appointed under the War Precautions (Luxuries Restriction) Regulations 1917 (Gazette, 29th May, 1917). The Board consisted of two representatives of the Chamber of Manufactures and two representatives of the Chambers of Commerce, with Mr. Nicholas C. Lockyer as chairman.

By proclamation in the Gazette of 10th August, 1917, the importation of the following goods into the Commonwealth was prohibited except with the consent in writing of the Minister of State for Trade and Customs:—Ale and other beer, porter, cider and perry (spirituous, in bulk or in bottle), potable spirits, perfumed spirits and bay rum, biscuits, confectionery, eggs (in shell or otherwise), fur apparel, perfumery, jewellery, imitation jewellery, and imitation precious stones, bodies for motor vehicles, whether imported separately or forming part of a complete vehicle.

**3. Commonwealth Board of Trade.**—In April, 1918 (Gazette 26th April, 1918), the Commonwealth Board of Trade was constituted with the following personnel:—President, the Hon. J. A. Jensen, M.P., Minister of State for Trade and Customs; Senator the Hon. E. J. Russell, Honorary Minister; the Hon. W. Massy Greene, M.P., Honorary Minister; Mr. H. A. Brookes (representing the Associated Chambers of Manufactures) and Mr. J. A. M. Elder (representing the Associated Chambers of Commerce).

The functions of the Board are to investigate and report upon all matters referred to it by the Minister, and generally to consider and advise the Government upon all matters affecting the Trade and Industry of the Commonwealth.

#### § 4. Method of Recording Imports and Exports.

1. **Value of Imports.**—The recorded value of goods imported from countries beyond the Commonwealth represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. The value of goods is taken to be 10 per cent.\* in advance of the fair market value in the principal markets of the country whence the goods were exported, the increase being intended to represent roughly the insurance, freight and other charges to the place of landing.

2. **Value of Exports.**—The recorded value of goods exported is taken to represent the value in the principal markets of the Commonwealth in the ordinary commercial acceptance of the term. Some modification of this practice has, however, been necessary in respect of products affected by the policy of price-fixing arising from the war.

3. **Records of Past Years.**—In the years preceding federation each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is, necessarily, the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports were not on uniform lines admitting of the preparation of a record for Australia as a whole. On the introduction of the Customs Act 1901, the methods of recording values were made uniform throughout the States, but it was not until September 1903 that a fundamental defect in the system of recording transhipped goods was remedied. Up to this date goods arriving in any Australian port for transshipment to a port in another Australian State were recorded at the latter port only, where they were ordinarily recorded as from the transshipping State, and not as an import from the oversea country.

In recording exports an analogous defect also existed in most of the States, since goods despatched from one Australian State for transshipment in another State to an oversea country were simply recorded in the former as an export to the transshipping State; thus no proper record of the export oversea was made. Owing to this defect the oversea trade prior to September 1903 is understated by an amount which it is impossible to estimate accurately, since it varies with the development of the shipping facilities of the States concerned. To discover the direction of the transhipped trade is not possible. The figures presented in the tables hereinafter are therefore the values as recorded, and must be taken as subject to the defects explained.

4. **Vessels (Ships) Imported and Exported.**—The imports or exports of vessels were not recorded prior to the year 1905. The value of vessels imported during each of the years 1905 to 1916-17 were as follows:—1905, £265,957; 1906, £366,300; 1907, £680,700; 1908, £700,500; 1909, £757,100; 1910, £711,850; 1911, £340,045; 1912, £1,257,655; 1913, £1,662,300;† 1914-15, £340,530; 1915-16, £485,141; 1916-17, £2,278,243. The exports during the same years were:—1905, £79,975; 1906, £51,365; 1907, £90,201; 1908, £82,355; 1909, £38,600; 1910, £72,000; 1911, £17,605; 1912, £66,800; 1913, £418,220; 1914-15, £129,950; 1915-16, £289,000; 1916-17, £124,156.

\* Although cost of freight and insurance has risen materially in consequence of the war, no further addition has been made to the value of imports, and cognisance should be taken of this fact in regard to imports during 1914-15 and subsequent years referred to throughout this section.

† Exclusive of warships, £2,495,000.

5. **Ships' Stores.**—Prior to 1906 goods shipped in Australian ports on board oversea ships as ships' stores were included in the general exports. From 1906, ships' stores have been specially recorded as such, and omitted from the return of exports. The value of ships' stores during 1906 amounted to £875,966 (of which bunker coal represented £575,471, or 65.7 per cent.), during 1907 to £998,897 (bunker coal representing £668,724, or 66.45 per cent.), during 1908 to £1,196,106 (bunker coal £867,707, or 72.55 per cent.), during 1909 to £1,071,677 (bunker coal £781,113, or 72.90 per cent.), during 1910 to £1,080,133 (bunker coal £740,567, or 68.57 per cent.), during 1911 to £1,238,446 (bunker coal £858,783, or 69.35 per cent.), during 1912 to £1,431,985 (bunker coal £1,008,259, or 70.41 per cent.), during 1913 to £1,458,702 (bunker coal £1,018,595, or 69.82 per cent.) during 1914-15 to £1,587,757 (bunker coal £829,875, or 52.26 per cent.), during 1915-16, to £1,544,872 (bunker coal £719,510, or 46.57 per cent.), and during 1916-17, to £1,676,116 (bunker coal, £748,852, or 44.68 per cent.).

### § 5. Oversea Trade.

1. **Total Oversea Trade.**—The following table shews the total trade of the Commonwealth with oversea countries from the earliest date for which records are available. In consequence of the defects of record, referred to in the preceding section, the results can be only approximate to the actual figures. The very marked rise and sudden fall in the value of imports during the period 1837 to 1842 were contemporaneous with heavy land speculation and a subsequent severe financial crisis. The great increase of trade in the early fifties was due to the discovery of gold. In the State of Victoria the value of imports from oversea countries increased from £500,000 in 1851 to nearly £11,000,000 in 1853, and to £13,000,000 in 1854; while in New South Wales similar imports rose from £1,390,000 in 1851 to £5,500,000 in 1854, when the total imports into the Commonwealth reached the sum of £34 13s. 10d. per head, and the total trade £56 3s. 10d. per head of the population. The rapid influx of persons anxious to share the good fortunes of these times, however, soon reduced the value of the trade per head, till, in 1858, it had declined to £31 19s. 6d. per head. The period 1867-1872 showed a marked reduction in the value of trade per head. For some years prior to this period New South Wales had experienced a succession of indifferent seasons, and Victoria was suffering from a congested labour market consequent on the decline of alluvial gold-mining in that State. This congestion of the labour market during the years 1862 to 1866 gave rise to the agitation for a protective tariff to provide employment in manufactures, and in April 1866, the Tariff Act, which expressed the protective policy thenceforward adhered to in Victoria, was assented to.

#### OVERSEA TRADE OF THE COMMONWEALTH, 1826 to 1916-17.

Period.	Recorded Value.			Value per Inhabitant.*			Percentage of Exports on Imports.

\* Reckoned on mean population of the year.

The graphs illustrating the movement of the oversea trade of Australia (see pages 571 and 572) shew that periods of depressed trade have been recurrent at more or less regular intervals of from seven to nine years, and, measured by population, each succeeding depression since 1855 carried the trade per head lower than the preceding one, until the lowest point was reached in 1894.

The year 1892 marked the beginning of a period of acute financial stress, culminating in the commercial crisis of 1893. The collapse of these years is plainly reflected in the trade records of that period, the trade of 1894 falling to £54,028,227, a decline of no less than 26.75 per cent. in three years. In 1895 there was a slight recovery, and a continuous upward movement until 1901, when the trade reached £92,130,183, or £24 6s. 1d. per head. A decline, due to drought, in the exports of agricultural, pastoral, and dairy produce, reduced the trade of 1902 to £84,591,037, but although in the next year there was a further shrinkage in the exports of agricultural produce, the increase in the value of the exports of metals, specie, butter, and wool was so large as to effect an increase in the total trade. From 1902 the increase in the value of trade continued, till in 1907 it reached the amount of £124,633,280, equal to £30 4s. 5d. per inhabitant.

The imports during 1907 were, doubtless, to some extent inflated by the importation of goods in anticipation of the tariff revision of that year. The trade of 1908 shews a decline of £10,523,000 as compared with 1907, of which £8,513,000 was in the value of exports, notwithstanding an increase of £3,447,767 in the export of gold and specie. This decline in the value of exports was largely due to reduced prices ruling for wool and metals in consequence of the financial crisis in the United States during the previous year, and in lesser degree to the smaller exports of agricultural and pastoral produce, due to the unfavourable season experienced in some of the States.

The trade of 1909 per head of population was slightly more than in 1908, notwithstanding that the gold exports were less by £5,193,587. In 1910 the value of imports per head was higher than in any year since 1885, and the value of exports was—excepting in the years 1906 and 1907—the highest since 1857. The high value of exports is particularly striking when considered in conjunction with the exceptionally small exports of gold. The exports of gold, already much reduced in 1909 as compared with 1908, were in 1910 still further reduced by £4,264,368 to £4,108,783, the smallest recorded since 1892. During 1911 the exports of gold bullion and specie again increased to £11,540,782. The continued increase in the value of imports during 1912 and 1913, while the value of exports remained stationary, is referred to on the next page.

The trade of 1914-15, was, of course, materially affected by the war. Of the £18,000,000 decrease in the value of exports during 1914-15 as compared with 1913, about £13,500,000 was mainly due to the dry season throughout the Commonwealth. From this cause the exports of wheat and flour were reduced by about £3,500,000, and of butter by £1,000,000. The reduction by £4,000,000 of the exports of wool was the joint result of the war and the drought, for although the clip was much reduced by the latter cause, the dislocation of the sales by the war was responsible for a considerable quantity being held over for shipment till the next year. The influence of the war in restricting exports was most pronounced with regard to metals and coal, which, together, were nearly £6,000,000 below 1913, while skins and tallow declined by £2,500,000. On the other hand, the war was responsible for *increased* exports of meats, leather, and horses, amounting to over £4,500,000.

The increased value of the trade of 1915-16 over that of the previous year was due mainly to deferred shipments and to increased prices. The vagaries of the seasons, too, led to a large increase in both imports and exports during this year, inasmuch as the failure of the 1914-15 crops necessitated large imports of grain in the earlier part of the trade year, whereas in the latter part of the same year large exports were provided from the bountiful harvest of 1915-16. The exports of meat were much diminished by the unfavourable weather conditions of the previous season.

Notwithstanding that large quantities of wheat already sold to the Imperial Government could not be sent away because of the shortage of shipping tonnage, the value of exports was much greater than for any previous year. This result, however, was due to increased prices. On the basis of uniform prices, the value of exports during 1916-17 would have been much below that of the years immediately preceding the war.

The variations in the composition of the trade will be seen from the tables in § 8 following.

**2. Alteration of Trade Year.**—The desirability had long been felt of bringing the trade year into conformity with the seasons for the export of agricultural and pastoral products, but a disinclination to break the continuity of records had, hitherto, prevented the change. As it was obvious that trade itself, and not merely the records, would be seriously disturbed by the war, the time appeared to be peculiarly opportune for making the alteration. The trade returns were, therefore, closed as on the 30th June, 1914, and the new year started from the 1st July. The year 1914-15 thus includes nearly eleven months under war conditions.

**3. Ratio between Exports and Imports.**—The foregoing table shews the percentage of exports on imports for each year.† From this it will be seen that, with few exceptions, due to temporary dislocations of trade, prior to 1892 the balance of trade has been on the side of imports, but from 1891 to 1912 the reverse has been the case. The excess of imports in the earlier years represents the introduction of capital in the form of Government loans and for investment in private undertakings, and the excess of exports represents mainly the interest and profit on the earlier investments, repayment of loans to foreign bondholders, and also freight on trade, which is carried mainly by ships of the United Kingdom and foreign countries. As the introduction of new capital and the payments for interest on existing investments and for shipping and other services are continually operating in opposite directions at the same time in the statistics of trade, it follows that it is the balance only of these transactions which is reflected in the excess of imports or exports.

The marked change in the balance of trade, which is in the direction of that of twenty years ago, is a striking feature of the trade returns for 1912. The decline in the ratio of exports to imports has been due, mainly, to loans raised in London by the Governments of the various States of the Commonwealth. The proceeds of these loans, of course, swell the import returns, but, as no immediate payment beyond an instalment of interest has to be made in return, the export figures are affected to a very minor degree, until such time as the principal of the debt is repaid. The larger number of immigrants had, also, to some extent affected the balance of trade by the introduction of capital. The following table presents the balance of trade of the Commonwealth as shewn by the records of imports and exports for each year from 1902, and, also, the modification of these figures as affected by loans raised in London by the Governments of the States and the Commonwealth:—

**EFFECT OF LOANS ON THE RECORDED BALANCE OF TRADE, 1902-17.**

Year.	Excess of Exports as Recorded.		Net Amount of Debt Raised or Redeemed(—) in London.	Excess of Exports Modified by Elimination of Loans to Commonwealth and States' Governments.	
	Amount.	Per cent.	Amount.	Amount.	Per cent.
	£1,000.		£1,000.	£1,000.	
1902 ... ..	3,239	100	5,014	8,253	100
1903 ... ..	10,439	322	1,658	12,097	146
1904 ... ..	20,465	632	753	21,218	257
1905 ... ..	18,494	571	1,968	20,462	248
1906 ... ..	24,993	771	5,308	19,685	238
1907 ... ..	21,015	649	2,259	18,756	227

1910 ... ..	14,477	447	2,904	11,573	140
1911 ... ..	12,514	386	3,123	15,637	189
1912 ... ..	937	29	12,205	13,142	159
1913 ... ..	1,178	36	19,666	18,488	225
1914 (January to June) ...	1,847	*	*	1,847	*
1914-15 ... ..	3,839	119	19,301	15,462	187
1915-16 ... ..	2,743	85	24,912	22,169	269
1916-17 ... ..	21,726	670	22,961	44,687	541

\* Prior to June, 1914, the figures relating to Debt were six months in advance of the Trade figures; since that date the periods to which the figures relate are identical.

† For individual years 1826 to 1860 see Official Year Book, No. 7, and previous issues.

The trade balances would be further modified by the loans of local governing bodies, by the imports of capital for private enterprises, and by the addition to or absorption of bank balances held in London on Australian account. Particulars of such transactions are, however, not available. In regard to the importation of private capital, it may not be without significance that the tariff of 1908 was followed by a pronounced diminution in the excess of exports, the suggestion being that industrial enterprise had been augmented by imported capital in consequence of the increased protection to local industries.

The general relationship between the balance of trade of the Commonwealth and the borrowing of money abroad is demonstrated by the following figures :—

### BALANCE OF TRADE AND PUBLIC DEBT, 1867-1917.

Period.	Annual Average.					
	Imports.	Exports.	Recorded Excess of		New Debt.	Excess of Exports modified by elimination of Loans.
			Imports.	Exports.		
	Mill. £.	Mill. £.	Mill. £.	Mill. £.	Mill. £.	Mill. £.
1867-1871 ...	17.8	20.0	...	2.2	1.7	3.9
1872-1876 ...	23.4	24.6	...	1.2	2.6	3.8
1877-1881 ...	25.6	24.6	1.0	...	5.2	4.2
1882-1886 ...	35.8	26.8	9.0	...	10.6	1.6
1887-1891 ...	35.4	29.4	6.0	...	7.4	1.4
1892-1896 ...	25.6	33.0	...	7.4	3.8	11.2
1897-1901 ...	36.2	44.4	...	8.2	3.2	11.4
1902-1906 ...	39.6	55.2	...	15.6	0.8	16.4
1907-1911 ...	56.0	71.2	...	15.2	1.3	16.6
1912-1915-16 (4½ years)	75.5	73.5	2.0	...	19.0	17.0
1916-1917 ...	76.2	97.9	...	21.7	23.0	44.7

\* Subsequent to 1897 these figures relate to moneys raised outside of Australia only. Prior to 1893 the amounts raised locally were insignificant, but it is probable that the amount of new debt raised during 1892-5 is somewhat overstated. Loans raised by Local Government Bodies are not included.

The maintenance of military forces abroad and the financial arrangements in connection with the war generally, have obscured the balance of trade for the last period shewn in the table, but it is evident from the 1916-17 figures that abnormal obligations have been dealt with.

It would appear, however, that immediately prior to the war, a sum of about 16 million pounds was required annually to meet the "invisible" obligations of the Commonwealth.

## § 6. Direction of Trade.

1. **Country of Shipment and Country of Origin.**—The following table shews, for the years 1908 and 1916-17, the value of imports recorded as direct from the principal countries, and also the disposition of the value of imports against the countries where they were produced or manufactured. A similar comparison for the years 1905 to 1915-16 will be found in the previous issue of this work.

\* The imports shewn as from enemy countries during 1916-17 were on board German ships interned in South Africa and elsewhere and were subsequently forwarded to Australia. (See also page 600.)

The only country from which the value of direct imports exceeds by any large amount the value of the imports of goods which were manufactured or produced therein, that is to say, the only country which shews a balance of any magnitude as a distributor of the goods of other countries to Australia, is the United Kingdom. The records of imports therefrom during the year 1916-17 shew that while the total direct imports from that country amounted to £39,996,204, the value of the manufactures or produce of the United Kingdom itself, imported from all countries whatsoever during the same year, was £36,253,864. From the foregoing figures it appears that goods to the value of at least £3,742,340 were received from other countries through the United Kingdom.

Other countries which prior to the war shewed balances as distributors to Australia, though absolutely of much less amount, were Belgium, Canada, Hong Kong, New Zealand, Straits Settlements, and Ceylon. The countries mentioned were, of course, not the only countries through which goods were indirectly imported into Australia, for the direct imports from other countries included considerable values which were not the produce of those countries. Prior to the war large quantities of goods not manufactured in France or Germany were shipped to Australia from those countries. Such transactions, were, however, more than balanced by French and German goods received through the United Kingdom and other countries.

2. *Direct Imports according to Country of Shipment.*—The following table shews the average yearly value of imports from each of the principal countries during each succeeding quinquennial period from 1894 to 1913, and for the year 1916-17. The countries mentioned in this table are those in which the goods were shipped or whence they were directly consigned to Australia.

**3. Imports from the United Kingdom.**—The foregoing tables shew that notwithstanding the smaller imports from the United Kingdom during 1916-17 as compared with the average of the quinquennial period immediately preceding the war, the figures were

more than double the average of the period 1894-8. It will be noticed, however, that the development of the import trade from the United Kingdom has not kept pace with the total trade, inasmuch as the *proportion* of imports shipped from the United Kingdom has, during the period under review, declined from 68.59 per cent. during the years 1894-8 to 52.47 per cent. for the year 1916-17. The apparent diversion of Australian trade from Great Britain is more fully dealt with in paragraph 12 of this section. The values of the principal imports of United Kingdom origin during the year 1916-17 are as follows :—

Ale and beer, £166,654 ; apparel and textiles—apparel, £2,733,095, textiles, £12,391,018 ; arms, ammunition and explosives, £451,187 ; books and periodicals, £199,694 ; brushware, £66,424 ; earthenware, etc., £247,730 ; clocks and watches, £13,766 ; cocoa and chocolate, £121,748 ; confectionery, £254,627 ; cordage, metal, £102,589 ; cordage, other, £153,502 ; cutlery, £232,360 ; drugs and chemicals—alkalies (soda), £122,783, fertilizers, £930, medicines, £204,731, other drugs and chemicals, £840,416 ; electrical and gas appliances, £250,771 ; electrical materials, £467,098 ; fancy goods, £112,065 ; fish, fresh and preserved, £140,046 ; furniture, £29,377 ; glass and glassware, £179,466 ; indiarubber and manufactures, £256,269 ; instruments, musical, £114,720 ; instruments, surgical and dental, £63,899 ; iron and steel—pig iron, £17,841, bar, hoop, ingot, etc., £597,420, scrap, £245, girders, beams, etc., £17,699, plate and sheet, galvanized or corrugated, £649,430, not galvanized or corrugated, £138,609, pipes and tubes, £450,403, rails, fishplates, etc., £24,086, tinned plates, plain, £1,137,303 ; wire, £44,410 ; wire netting, £15,532 ; jewellery and precious stones, £172,912 ; kinematographs and films, £51,495 ; leather and leather manufactures, £170,277 ; machines and machinery, £1,220,065 ; metals, manufactures of, £1,859,309 ; milk, preserved, £4050 ; oils (not essential), £115,649 ; paints and colours, £457,610 ; paper, £1,269,119 ; pickles, sauces, etc., £73,730 ; soap, £39,789 ; specie, £16,968 ; spirits, £1,349,845 ; stationery, £281,707 ; tobacco, £86,682 ; tools of trade, £249,972 ; varnishes, £58,009 ; vehicles—bicycles, etc., £130,143, motors, £96,463, other vehicles, £190,054 ; vessels (ships), £2,258,361 ; yarns, £1,061,423.

4. **Imports Shipped from British Possessions.**—The growth of the value of imports from other British possessions during the past twenty years has been such as to increase the proportion to total imports from 11.06 per cent. in the years 1894-8 to 16.03 per cent. in 1916-17, the actual values being respectively £3,056,207 in the earlier period and £12,218,554 in 1916-17. Of the total imports from British possessions during 1915-16, 17.82 per cent., or 2.86 per cent. of all imports, was from New Zealand ; 31.18 per cent., or 5.00 per cent. of all imports, from India ; 13.09 per cent., or 2.10 per cent. of all imports, from Canada ; and 10.52 per cent., or 1.69 per cent. of all imports, from Ceylon. The imports from Canada shew an increase of £441,118, or 38.07 per cent. over those of 1913, and an increase of £742,818, or 86.66 per cent., over the average of the period 1909-13.

5. **Principal Imports, the Produce of British Possessions, 1916-17.**—These are as follows :—

(i.) *Canada.* Apparel and textiles—corsets, £52,942, other, £33,504, boots and shoes, £10,912 ; carbide of calcium, £13,717 ; fish, £123,857 ; fruit—apples, £18,499 ; furniture, £273 ; indiarubber and manufactures, £39,227 ; agricultural implements and machinery, £245,310 ; other machines and machinery, £12,665 ; metal manufactures, £134,343 ; paper, £302,380 ; timber, £14,557 ; motor chassis, £203,201, motor bodies, £34,647, other vehicles, £58,404.

(ii.) *Ceylon.* Coir fibre, £3529 ; nuts, £41,441 ; rubber and manufactures, £99,643 ; tea, £1,010,545. The large increase in the imports from Ceylon—from an average of £292,653 per year during the years 1894-8, to £1,285,294 in 1916-17—is due to the displacement of China teas in the Australian markets by those of India and Ceylon. Of

the total imports of tea during the year 1916-17, 57.80 per cent. was the produce of Ceylon.

(iii.) *Fiji*. Bananas, £198,323; copra, £43,619; sugar—produce of cane, £830,704; molasses, £16,345.

(iv.) *India*. Bags and sacks, £2,330,871; hessians, £416,298; cameos, precious stones, unset, £5875; carpets, mats, etc., £29,060; coffee and chicory, £53,686; cotton, raw, £2205; other unmanufactured fibres, £26,426; dyes, £1242; grain—beans and peas, £5171; iron, pig, £74,013; linseed, £162,268; oils—castor, £15,746, linseed, £8597; rice, £162,404; shellac, £5316; skins and hides, £106,018; spices, £19,553; tea, £264,591; timber, £6618; wax, paraffin, £42,266; yarns, £20,005.

(v.) *New Zealand*. Apparel and textiles, £16,461; animals—horses, £15,142, sheep, £21,086; beans and peas, £7950; butter, £35,004; cement, £8699; cheese, £3020; coal, £27,726; flax and hemp fibre, £203,332; fish, £39,168; gold, bullion and ore, £203,435; implements and machinery (agricultural), £3300; machines and machinery, £7573; meats, £37,710; milk and cream, £14,122; potatoes, £226; seeds, £16,131; skins and hides, £166,944; timber, £537,683; twine, reaper and binder, £25,250; wool, £468,085.

(vi.) *Papua*. Copra, £15,650; fibres, flax and hemp, £11,283; gold bullion and ore, £27,459; ores, other than gold, £15,718; india rubber, £18,084.

(vii.) *Union of South Africa*. Bark, tanning, £48,575; explosives, £117,839; feathers, £6911; grain—maize, £2828; precious stones, £123,092; skins, £15,326; tobacco, etc., £4701.

(viii.) *Straits Settlements*. Canes and rattans, etc., unmanufactured, £9741; fodder—oil cake, £814; rubber and rubber manufactures, £50,714; spices, £41,410; sago and tapioca, £73,088.

**6. Imports Shipped from Foreign Countries.**—The imports direct from foreign countries during the year 1916-17 represented 31.50 per cent. of the total imports, as compared with 20.35 per cent. during the years 1894-8. Of the total imports into Australia shipped from foreign countries during 1916-17, 64.71 per cent.—20.37 per cent. of all imports—was from the United States. The small imports from Germany were, of course, due to the war, and consisted of goods in transit on board German ships on the outbreak of war, and of goods received from the captured German possessions in the Pacific.

**7. Principal Imports the Produce of Foreign Countries, 1916-17.**—(i.) *Austria-Hungary*. Apparel and textiles, £474; furniture, £150; chinaware, £375; glassware, £138; fancy goods, £38; jewellery and precious stones, £4; manufactures of metals, including machinery, £28; paper and stationery, £14; pipes, smoking, etc., £31.

(ii.) *Belgium*. Apparel, £7305; textiles, £4428; cement, £172; drugs, chemicals, and fertilizers, £135; glass and glassware, £21,740; iron and steel—partly manufactured, £1683; plate and sheet, £602; machines and machinery, £2028; metal manufactures, £3494; motors and parts, £55; paper, £9262; zinc manufactures, £1295.

(iii.) *Brazil*. Coffee, £2265; india-rubber, £125,425.

(iv.) *Chile*. Soda nitrate, £107,931.

(v.) *China*. Apparel and textiles, £245,512; cotton, raw, £21,549; fish, £16,572; fruit, £15,959; ginger, £24,545; rice, £53,204; nuts, £40,809; oils, £16,363; tea, £50,420.

GRAPH SHEWING VALUES OF TOTAL TRADE, EXPORTS, AND IMPORTS OF  
COMMONWEALTH, 1826 to 1916-17.

EXPLANATION OF GRAPH.—The base of each square represents an interval of five years, and the vertical height five million pounds sterling for Imports and Exports, and ten million pounds sterling for Total Trade.

GRAPH SHEWING THE VALUES PER HEAD OF POPULATION OF TOTAL TRADE, EXPORTS, AND IMPORTS OF COMMONWEALTH, 1826 to 1916-17.

EXPLANATION OF GRAPH.—The base of each square represents an interval of five years, and the vertical height five pounds per head of the population.

The decline of the value of imports from China during the past twenty years is due to the loss of the tea trade, which now draws its supplies mainly from India and Ceylon.

(vi.) *Denmark*.—Ale and beer, £7586; cement, portland, £2976; matches, £2194.

(vii.) *France*. Apparel and textiles, £795,957; cream of tartar, £140,056; tartaric acid, £2741; other drugs and chemicals, £65,230; fruits, £1788; fancy goods, £33,471; gelatine, £5507; jewellery, £13,682; kinematographs, films, etc., £3718; pipes, smoking, etc., £40,928; motor vehicles and parts, £15,877; paper and stationery, £25,474; perfumery, £36,991; resin, £4729; rubber manufactures, £16,017; leather, £4211; machinery and manufactures of metal, £21,263; spirits, £162,655; tiles, £2316; wine, £42,606.

(viii.) *Germany*. Ale and beer, £122; apparel and textiles, £11,240; arms, ammunition, and explosives, £52; brushware, £232; cement, £625; chinaware, etc., £682; copper wire and cable, covered, £180; earthenware, £165; dyes, £143; fertilizers, £1177; other drugs, etc., £5000; fancy goods, £4073; furniture, £81; glass and glassware, £1689; indiarubber manufactures, £272; metals and manufactures of metals—iron and steel: bar, hoop, ingot, etc., £2179, plate and sheet, £759, pipes and tubes, £194, railway iron, £300, tools of trade, £320; wire, £1708; wire netting, £146; machines and machinery, £3273; lamps and lamp-ware, £1314; electrical and gas appliances, £1000; other manufactures of metals, £8306; jewellery, cameos, etc., £100; leather and leather manufactures (excluding boots and shoes), £18; musical instruments, £7382; paper, £1690; specie, £27,116; spirits, £597; stationery, £980; tobacco, £2147; paints and varnishes, £253; yarns, £224.

(ix.) *Italy*. Apparel and textiles, £302,326; flax and hemp, £24,229; fruits, £8193; matches and vestas, £3119; marble and stone, £19,057; oils—olive, £11,828, essential, £12,807; nuts, £11,178; sulphur, £116,151; motors and parts, £17,682; rubber manufactures, £29,414; cream of tartar, £13,837; tartaric acid, £13,501.

(x.) *Japan*. Apparel and textiles, £1,602,188; bags, baskets, etc., £74,132; brushware, £55,173; cement, £1082; chinaware, £90,866; earthenware, £34,207; fancy goods, £113,841; fibres—cotton waste, £22,046; fish, £11,617; furniture, £11,722; glass and glassware, £136,413; grass straw for hats, £35,905; machinery and metal manufactures, £171,935; matches, £21,231; oils and waxes, £82,827; paper and stationery, £52,680; rice, £4070; spices, £8695; sugar, £127,179; sulphur, £300,111; tea, £4004; timber, £142,354.

Further reference is made in a later page to the imports from Japan.

(xi.) *Java*. Coffee, raw, £16,466; hats and caps, £265; rice, £155; kapok, £102,399; rubber, £5314; sugar, £536,361; tobacco, £6352; tea, £419,487.

(xii.) *Netherlands*. Apparel and textiles, £72,492; cocoa and chocolate, £35,751; cameos and precious stones, £15,090; metal manufactures, £51,980; paper, £25,073; spirits, £87,050; timber, £3236; vessels (ships), £382.

(xiii.) *Norway*. Calcium carbide, £30,642; cement, £385; fish, £193,903; machinery and manufactures of metals, £4463; matches, £4970; milk, preserved, £14,863; paper, £707,170; timber, etc., £33,395.

(xiv.) *Peru*. Rubber, £12,988; sugar, £144,408.

- (xv.) *Philippine Islands*. Flax and hemp, £116,798; cigars, £14,306.
- (xvi.) *Russia*. Flax, £1236; furs, £11,017; oils, £697; timber, £1032.
- (xvii.) *Spain*. Brandy (bulk), £10,387; corks, etc., £35,373; liquorice, £1033; nuts, £11,952; ores, £4237; wine, £4936.
- (xviii.) *Sweden*. Calcium carbide, £8366; earthenware, glassware, etc., £11,545; electrical machinery and fittings, £6377; cream separators, £88,529; other machinery, £34,969; manufactures of metals, £51,951; matches and vestas, £33,471; paper, £411,185; telephones, £4,226; timber, £2966.
- (xix.) *Switzerland*. Apparel and textiles, £1,009,407; chassis for motor cars, £1016; cigars, £2192; cocoa and chocolate, for potable use, £1645; confectionery, £109,224; drugs and chemicals, £17,347; fibro-cement, £2358; grass straw for hats, £20,936; machinery and metal manufactures, £27,565; milk, £26,967; watches, £167,398.
- (xx.) *United States of America*. Apparel and textiles—boots, shoes, etc., £135,854, corsets, £135,445, gloves, £31,000, hats and caps, £27,997, socks and stockings, £355,280, other apparel, £248,000, textiles, £756,118; arms, £31,658; ammunition and explosives, £108,075; bags, baskets, etc., £52,529; brushware, £28,445; butter, £2618; cameras, kinematographs and films, talking machines, £321,278; clocks and watches, £81,201; confectionery, £48,967; drugs and chemicals—cream of tartar, £24,729, medicines, £145,237, other, £301,277; electrical articles and materials, £74,710; fancy goods, £52,468; fish, £263,760; fruit, £118,356; furniture, £32,018; glass and glassware, £230,745; glucose, £2356; hops, £20,690; indiarubber manufactures, £417,212; leather, £561,376; meats, £71,530; metal manufactures—iron and steel: bars, ingots, hoops, etc., £500,667, girders, beams, etc., £130,432, pipes and tubes, £119,978, plate and sheet, £257,544, railway iron, £48,931; tools of trade, £254,568; wire, £236,134; machines and machinery, agricultural, £226,904; other machines and machinery, £1,442,303; other metal manufactures, £1,157,976; milk, £3617; musical instruments, £210,093; oils, fats, and waxes—benzine and gasoline, £780,059, cotton seed, £8331, kerosene, £615,973, lubricating oils and greases, £348,992, paraffin wax, £39,694; turpentine, £94,327; paints and varnishes, £134,804; paper, £681,719; perfumery, £68,405; resin, £74,802; soap, £26,027; soda—acetate, £4345, caustic, £46,628, salicylate, £6307; stationery, £164,061; surgical and dental instruments, £62,458; timber, £725,218; tobacco, cigars, etc., £870,868; vehicles, motors and parts, £1,088,679; other vehicles and parts, £212,897; wood and wicker manufactures, £83,720.

The imports from America are again referred to in a later page.

8. *Direction of Exports*.—The following tables shew that, prior to the war, a constantly decreasing proportion of Australian exports was being consigned to the United Kingdom. This was not entirely due to the relatively smaller purchases of Australian produce by the United Kingdom, but was in some measure the effect of an increasing tendency towards direct shipment of wool, skins, etc., to the consuming countries—notably to Belgium, France, and Germany—instead of distributing the trade through London as formerly. The figures given below, however, do not, even for the later pre-war years, denote the total purchases by European countries of Australian produce, as large quantities were still distributed from London. It should be noted, too, that the exports to India and Ceylon consisted largely of gold shipped on London account, and which was, therefore, virtually an export to the United Kingdom. The feature of the figures for 1916-1917 is the larger proportions of exports to the United Kingdom, Canada, Italy, Japan, and the United States of America. The larger proportion sent to the United Kingdom was mainly due to increased exports of wheat, meat, wool, minerals, and metals. Italy received larger shipments of wheat and wool, Japan of wool, wheat, and metals, while the larger proportion of exports to the United States and to Canada was mainly due to shipments of gold.

\* Norway and Sweden combined for these years.

9. Exports to the United Kingdom.—The principal exports to the United Kingdom during the year 1916-17 were as follows:—Butter, £4,959,643; cheese, £364,474; copra, £29,289; fibres—rags, £26,610; fruit—apples, £82,015, other, including pulp, £255,170; grain and pulse—barley, £30,850, oats, £33,468, wheat, £6,257,098, flour, £1,472,469, other, £45,615; hair, £14,756; jams and jellies, £734,159; jewellery and precious stones, £19,086; leather, £731,606; meat—frozen beef, £4,890,927, mutton, £968,725, lamb

£527,933, rabbits and hares, £911,247, other frozen meat, £195,398, potted meat, £127,202, meat preserved in tins, £553,515; minerals and metals—copper—ingots, £2,914,289, in matte, £57,022; gold—specie, £3438, bullion, £1479, in matte, £128,088, ore, £967; silver—bullion, £861, in matte, £325,399; silver and silver-lead—concentrates, £17; lead—pig, £2,798,526, in matte, £637,256; tin—ingots and ore, £220,625; zinc, concentrates, £270,904; ores, other, £383,078; metals, scrap—exclusive of iron and steel, £26,029; zinc, bars, blocks, etc., £60,187; oil—cocoanut, £24,426, whale, £31,822; pearlshell, £62,948; skins—hides, £270,848, rabbit and hare, £45,217, sheep, £750,502, other skins, £136,095; tallow, £829,041; timber, £10,267; wine, £70,097; wool—greasy, £18,608,395; scoured, £4,823,547.

10. **Principal Exports to British Possessions, 1916-17.**—(i.) *Canada.* Meats, £5005; oil—cocoanut, £19,573; specie—gold, £6,000,000; hides and skins, £78,757; vegetables—onions, £13,361; wool, £77,267; zinc concentrates, £86,664.

(ii.) *Ceylon.* Butter, £10,919; fodder, £1878; grain, flour, £284; lard, £3513; lead, pig, £19,520; meats, £12,385; silver, bullion, £47,475; soap, £4063; sugar, £3705; timber, £36,041.

(iii.) *Egypt.* Apparel and attire, £1,927; butter, £9; grain and pulse—wheat, £719,235; flour, £112,999; meats—preserved in tins, £2169; tobacco, cigars, etc., £5472.

(iv.) *Fiji.* Apparel and textiles—apparel, including boots and shoes, £23,124, textiles, £28,539; bags, sacks, and cordage, £11,770; biscuits, £30,679; coal, £30,913; drugs and chemicals—fertilizers, £9213, other, £6024; grain, prepared—bran, pollard, and sharps, £37,135, flour, £25,621, rice, cleaned, £7778; machines and machinery, £12,921; metal manufactures, £48,412; oils, fats and waxes, £7221; specie, £200; timber, undressed, £8455; vehicles, £7407.

(v.) *Hong Kong.* Butter, £23,333; fish, £41,714; flour, £7971; lead, pig, £45,414; leather, £22,055; meats, £12,573; sandalwood, £71,460; soap, £3665.

(vi.) *India.* Biscuits, £30,732; bran, pollard, etc., £1514; coal, £22,421; copper, ingots, £279,520; horses, £312,271; hay and chaff, £12,011; jams and jellies, £166,089; lead, pig, £72,500; leather, £18,217; meats, £380,248; sandalwood, £4429; silver, bullion, £443,685; soap, £3591; tallow, £6647; tobacco, etc., £579; wool, £87,860.

(vii.) *New Zealand.* Apparel and textiles, etc.:—apparel—boots and shoes, £29,850, other apparel, £34,381, textiles, £86,644; bags and sacks, £3403; bark, tanning, £20,703; books and periodicals, £52,423; cameras, kinematographs and films, talking machines, etc., £53,137; photographic goods, £11,693; coal, £205,895; copper, ingots, £500; drugs and chemicals—fertilizers, £144,692, medicines, £50,893, other drugs, etc., £96,386; electrical materials, £12,521; fodders, £323; fruit—fresh, £39,369, dried, £52,824; glass and glassware, £32,229; grain—barley, £21,990, flour, £109,179, oats, £58,171, rice, £40,986; wheat, £61,166; hides and skins, £26,181; horses, £11,190; indiarubber manufactures, £136,415; iron, pig, £11,334; jewellery and precious stones, £12,394; lead, pig, £18,201; leather and leather manufactures, £82,563; metals, manufactures of—agricultural implements and machinery, £9584, other machines and machinery, £95,191, other manufactures of metals, £152,459; motor vehicles and parts, £18,117; oils, etc., £61,289; onions, £23,042; plants, trees and bulbs, £8983; paper, £16,868; salt, £26,001; seeds, £19,425; soap, £45,736; specie—gold, £222,000; spirits, £34,130; stationery, £65,992; sugar, £6641; tea, £131,640; timber, £115,491; tin, ingots, £21,928; tobacco, £107,162; wine, £29,232; vessels transferred, £2750.

(viii.) *Papua.* Ale and beer, £2144; apparel and textiles, £16,290; biscuits, £3267; butter, £3080; coal, £2536; fish, £6607; flour, £2713; machinery and manufactures of metal, £21,694; meats, £8698; oils, etc., £9154; rice, £14,982; timber, £6928; tobacco, £10,879.

(ix.) *Union of South Africa.* Animals, living—sheep, £25,442; butter, £1400; fruits—fresh, £250, other, £20,624; grain—wheat, £646,551; flour £335,695; jams and jellies, £11,198; leather, £56,995; fruit juices, £4216; machinery and manufactures of metal, £14,257; meats, preserved, in tins, £16,546; oils, etc., £17,242; seeds, £1537; soap, £10,562; tallow, unrefined, £17,231; timber, £84,245.

(x.) *Straits Settlements.* Butter, £30,700; coal, £28,035; grain, flour, £128,420; horses, £6427; leather, £22,003; machines and machinery, £32,851; meats, £76,533; tin ore, £222,281; sandalwood, £6504; soap, £14,598.

11. **Exports to Foreign Countries.**—The foregoing table shews that, prior to the war, an increasingly large proportion of the exports from the Commonwealth was being shipped to foreign countries. Apart from the large export of gold which was shipped to the United States of America, on London account, during 1915-16, the proportion of exports to foreign countries during the war has been much below that of recent pre-war years. This, of course, has been due mainly to the elimination of German and Belgian trade, and to reduced exports to France. Some further slight effect in the same direction may be due to the restrictions placed upon exports to China, the Netherlands and Siam from January, 1916.

12. **Principal Exports to Foreign Countries, 1916-17.**—These are as follow:—

(i.) *Argentine Republic.* Agricultural implements and machinery, £4698; wheat, £22,099.

(ii.) *Chile.* Coal, £50,068; coke, £3004.

(iii.) *China.* Butter, £35,096; flour, £3463; lead, £19,941; leather, £13,549; sandalwood, £5554; stearine, £9237.

(iv.) *Dutch East Indies: Java.* Butter, £217,093; biscuits, £10,405; cattle, £10,311; coal, £16,355; fertilizers, £87,866; flour, £184,397; fruits, fresh, £9607; horses, £3578; meats, £17,661; leather and manufactures, £51,296; soap, £2851.

(v.) *Other East Indies.* Butter, £17,906; biscuits, £8428; flour, £82,528; meats, £1815; soap, £9486.

(vi.) *France.* Copper—ingots, £13,574, copper in matte, £8342; flour, £369,093; hides and skins, £258,236; wheat, £239,468; wool, £963,097; zinc—bars, £32,429.

(vii.) *Italy.* Flour, £283,619; skins, £3772; tallow, £16,546; wheat, £2,273,032; wool, £1,845,861.

(viii.) *Japan.* Bones, £22,031; butter, £2868; concentrates—silver and silver lead, £30,850; zinc, £419,282; glue pieces and sinews, £10,253; hides, £1192; lead, pig, £435,248; manures, £14,573; oils, £13,585; tallow, £157,510; wool, £2,470,414.

(ix.) *Peru.* Coal, £10,879; wheat, £336,378.

(x.) *Philippine Islands.* Butter, £18,499; cattle, £4664; flour, £129,015; fodder, £3861; machines and machinery, £426; meats—bacon and hams, £14,510, beef, £11,139, mutton, £965, other meats, £1174; milk, concentrated, £20,577; onions, £4179.

(xi.) *United States of America.* Coal, £2390; concentrates—zinc, £307,658; copra, £76,982; hair, £7587; leather, £157,330; sausage casings, £63,106; oils—cocoanut, £34,927, eucalyptus, £25,093; pearlshell, £245,791; skins, £702,844; specie—gold, £4,500,000; timber, £21,562; tin—ingots, £314,409; wheat, £93,417; wool, £13,513.

## § 7. Development of Export Trade to Eastern Countries.

1. Trade with Eastern Countries.—The following tables shew the value of exports from the Commonwealth to Eastern countries during the last five years in comparison with the year 1901. The principal countries concerned in this trade are China, India, Ceylon, Japan, East Indies, Philippine Islands, Straits Settlements, and Hong Kong, and the particulars given in the tables apply to these countries only:—

### VALUE OF PRINCIPAL ITEMS OF MERCHANDISE EXPORTED FROM THE COMMONWEALTH TO EASTERN COUNTRIES, 1901 and 1912 to 1916-17.

Total...	56,618	722,133	765,604	1,533,525	2,619,533	2,558,274

The wool exported to the East by the several States during 1916-17 was shipped as follows:—New South Wales, £2,022,730; Victoria, £87,860; Queensland, £447,684.

**§ 8. Trade of Commonwealth since Federation.**

1. **Classified Summary of Australian Trade.**—The following tables present the trade of the Commonwealth during each of the years 1901 and 1912 to 1916-17, arranged in classes according to the nature of the goods:—

## STATISTICAL CLASSIFICATION OF IMPORTS AND EXPORTS.

Class.	Articles.
I.	FOODSTUFFS of animal origin, excluding, however, living animals.
II.	FOODSTUFFS of vegetable origin, and common salt.
III.	BEVERAGES, non-alcoholic only, and the substances used in making them.
IV.	SPIRITS AND ALCOHOLIC LIQUORS, including spirits for industrial purposes, and such pharmaceutical preparations as are dutiable as spirits.
V.	TOBACCO, and all preparations thereof.
VI.	LIVE ANIMALS.
VII.	ANIMAL SUBSTANCES, mainly unmanufactured, which are not foodstuffs.
VIII.	VEGETABLE SUBSTANCES and non-manufactured fibres.
IX.	APPAREL, TEXTILES, and various manufactured fibres.
X.	OILS, FATS, AND WAXES.
XI.	PAINTS AND VARNISHES.
XII.	STONES and MINERALS, used industrially.
XIII.	SPECIE—gold, silver, and bronze.
XIV.	METALS, UNMANUFACTURED, and ORES.
XV.	METALS, PARTLY MANUFACTURED.
XVI.	METALS, MANUFACTURED, including machinery.
XVII.	LEATHER AND MANUFACTURES of leather, together with all substitutes therefor, and also INDIARUBBER AND INDIARUBBER MANUFACTURES.
XVIII.	WOOD AND WICKER, both raw and manufactured.
XIX.	EARTHENWARE, CEMENTS, CHINA, GLASS AND STONEWARE.
XX.	PAPER AND STATIONERY.
XXI.	JEWELLERY, TIMEPIECES, AND FANCY GOODS.
XXII.	OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS.
XXIII.	DRUGS, CHEMICALS, AND FERTILIZERS.
XXIV.	MISCELLANEOUS.

## COMMONWEALTH IMPORTS ARRANGED IN CLASSES, 1901 and 1912 to 1916-17.

**2. Imports of Bullion and Specie.**—Of the total imports of bullion and specie into the Commonwealth during 1916-17, 72.63 per cent. was in the form of gold bullion, and was received almost entirely from New Zealand for the purpose of minting.

**3. Exports of Bullion and Specie.**—Of the total exports of bullion and specie during 1916-17, gold represented 95.58 per cent., practically the whole of which was in the form of specie.

The countries which have appeared as the largest recipients of gold from Australia in normal times are New Zealand, India, Union of South Africa, Hong Kong, Ceylon and United Kingdom, but as large amounts of gold recorded as exported to Ceylon, are shipped *under option*, and may be despatched thence to any other country, the actual amount received by each country cannot be stated. Moreover, the dimensions of the gold shipments from Australia to particular countries are without any significance regarding the business transactions between Australia and those countries. Shipments of gold merely represent a contribution towards the liquidation of liabilities or the establishment of credit abroad; and Great Britain being the principal creditor and banker, shipments of gold from the Commonwealth are for the most part directed by London bankers to suit their requirements. The large shipments of gold to the United States of America and to Canada during the last two years were due to the exigencies of the war.

## § 10. Effects of Prices on the Values of Exports.

**1. Significance of Price in Totals.**—In comparing the value of exports from, and also imports into, any country for a series of years, the question naturally arises as to how much any variation in the aggregate value is due to fluctuations in prices, and how much to increase or decrease of actual quantities, for, in aggregates expressed only in value—the only possible method when the commodities differ—the two sources of variation are confused.

The scheme of comparison followed is to select all such articles of export as are recorded by units of quantity, and to apply to the quantities exported during each year the average price per unit ruling in some year, arbitrarily taken for the purposes of comparison as the basic year. The ratio which the total actually recorded for the year under review bears to the total obtained by applying to the quantities of the year under review the average prices ruling during the basic year, may be called the “price-level” of the latter—as compared with the former—for the group of commodities considered, and may be taken as a measure of the effect of the change of price in the intervening period. Since the value of the articles used in the calculations represents as much as 88 per cent. of all exports during 1916-17—after excluding specie and gold bullion, which are not subject to price changes—a fairly extensive basis is afforded on which to found an estimate of the effect of prices over the full range of exports.

**2. Effect of Prices.**—The following table shows the values of exports as actually recorded in each year, together with the values computed on the assumption that the prices of 1901 were maintained. The table also shows the yearly “price-levels,” based upon the results so ascertained.

This table obviously furnishes a measure of the influence of prices on the value of exports of each year since 1901. Column IV.—values computed on 1901 prices—represents the volume of exports (less specie and gold bullion), expressed in the common

denomination of value, and from the figures therein it will be seen that, had the prices of 1901 remained constant, the value of the exports of merchandise during the year 1916-17 for example, would have been £45,732,099 only, instead of £86,433,667—the value actually recorded. The difference between these amounts (£40,701,568) results from a rise of 89.0 per cent. (i.e., from 1000 to 1890) in the price of commodities for the period intervening between 1901 and 1916-17.

It will be seen from the column of "Price-Levels" that prices as indicated by the Commonwealth exports rose steadily from the beginning of the decade to the year 1907. The financial crisis in the United States of America caused a pronounced fall in the prices of 1908. Owing to the large proportion of the aggregate value of exports represented by wool and wheat, any change in the price of these commodities has a marked effect on the index-numbers for the total group of exports, and it is to their influence that the fall of prices in 1911 is mainly due.

### EFFECT OF PRICES ON THE VALUE OF COMMONWEALTH EXPORTS, AND EXPORT PRICE LEVELS FOR THE PERIOD 1901 to 1916-17.

(BASIC YEAR, 1901.)

\* These are index-numbers for the total group of exports, excluding specie and gold bullion.

3. Influence of Quantity and Price on Total Increased Value of Exports.—The estimated actual and relative effects of the influence of—(i.) increase or decrease in the exports of specie and gold bullion, (ii.) increase or decrease of quantities of other exports, (iii.) variation of prices on the value of the exports of each year since 1905 compared with 1901, are shewn on the next page.

From the following figures it will be seen that exports of 1916-17, for example, of specie and gold bullion compared with 1901, shew a decrease of 19.70 per cent., other exports (merchandise) shew an increase of 29.37 per cent. in quantities, and an increase of 89.01 per cent. in the group-prices. These several influences effect an aggregate increase of £48,259,310, or 97.11 per cent. over 1901 as follows:—By increased quantities of merchandise, £10,383,703 (21.51 per cent.); by increased prices, £40,701,568 (84.34 per cent.); accompanied by a decrease of £2,825,961 (5.85 per cent.) in the exports of specie and

gold. Of the greater value of merchandise exported during 1916-17 as compared with 1901, 20.33 per cent. represented increased production, and 79.67 per cent. was due to higher prices.

The following table of index-numbers shews the variations in price of the different classes of goods exported grouped according to their industrial origin :—

### PRICE-LEVELS OF EXPORTS, 1901-17.

(BASIC YEAR, 1901.)

Year.	Agricultural Produce.	Pastoral Produce.	Dairy Produce.	Mineral Produce.	Miscellaneous.
1901 ... ..	1,000	1,000	1,000	1,000	1,000
1902 ... ..	1,127	1,115	1,155	844	1,114
1903 ... ..	1,118	1,223	943	818	1,196
1904 ... ..	1,109	1,243	906	863	946
1905 ... ..	1,186	1,302	994	924	920
1906 ... ..	1,161	1,356	1,020	1,115	976
1907 ... ..	1,174	1,426	1,042	1,149	1,022
1908 ... ..	1,414	1,231	1,113	910	995
1909 ... ..	1,490	1,234	1,030	895	1,040
1910 ... ..	1,472	1,270	1,071	894	907
1911 ... ..	1,260	1,196	1,085	930	1,220
1912 ... ..	1,415	1,271	1,196	1,123	1,237
1913 ... ..	1,347	1,324	1,126	1,109	1,203
1914-15 ... ..	1,410	1,340	1,183	1,114	1,179
1915-16 ... ..	1,929	1,572	1,493	1,543	1,079
1916-17 ... ..	1,756	2,050	1,669	1,868	1,187

The high index-numbers for mineral produce during 1906 and 1907 reflect the world's prices for that period, when prices registered for all the principal industrial metals touched a point higher than any previously recorded for many years.

The lower index for agricultural produce exported during 1916-17 is due to the lower price registered for wheat, viz., 4s. 10d. per bushel as against 5s. 6d. per bushel for 1915-16.

The movements in the miscellaneous group during the last three years are practically a reflection of the variations in the price of pearl-shell, which is by far the most important item in the group.

## § 11. External Trade of Australia and other Countries.

1. **Essentials of Comparisons.**—Direct comparisons of the external trade of any two countries are possible only when the general conditions prevailing therein, and the scheme of record, are sensibly identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance, and charges may be added thereto. Or again, the values of imports and exports in the one may be declared by merchants; whereas in the other they may be the official prices, fixed from time to time by a commission constituted for the purpose. The figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. Including bullion and specie, the transit trade of Belgium, for example, represented, prior to the war, approximately 40 per cent. of the gross trade recorded; of Switzerland, 45 per cent.; of France, 20 per cent.; and of the United Kingdom, 15 per cent.; whereas in Australia the same element represents only 4 per cent., and in New Zealand even less.

2. "Special Trade" of Various Countries.—Special trade may be defined, agreeably to the practice of the British Board of Trade, as (a) imports entered for consumption in the country (as distinguished from imports for transhipment or re-export) and (b) exports of domestic products.

**TRADE OF VARIOUS COUNTRIES (IMPORTS FOR HOME CONSUMPTION AND EXPORTS OF DOMESTIC PRODUCTS, INCLUDING BULLION AND SPECIE) FOR LATEST AVAILABLE YEAR.**

Uruguay ...	31/12/11	9,333,000	8,840,000	18,173,000	7 18 6	7 10 1	15 8 7

In the above table the figures relate, as nearly as is possible, to imports entered for consumption in the various countries quoted, and to exports of their domestic products. It is to be noted, however, that these figures do not unequivocally denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption, and, after undergoing some process of manufacture or further modification, are re-exported as domestic production, and further, the statistical records of many countries do not distinguish between bullion and specie imported for the use of the particular country (home consumption) and the amount in transit, nor between the exports of that produced within the country and that re-exported. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest.

3. External Trade as a Measure of Prosperity.—External trade is not necessarily a measure of the prosperity of a country. It is, for example, obvious that the external trade of a community depends not only upon the aggregate of its requirements, but also upon the extent to which it fails to supply requirements from its own resources. A community largely self-contained, for example, may have but a small external trade per head, and yet, by virtue of its capacity to produce and manufacture its own raw material, may actually enjoy greater prosperity and a higher standard of living than another country whose external trade per head is much greater. The same observation applies equally

to comparisons of the trade of the same country at different periods. A young country, the industries and export trade of which are mainly connected with raw or natural products, may, for example, through internal development, find the growth of its external trade diminishing per head of population without necessarily suffering any real diminution in the well-being of its people. In this regard it is interesting to contrast the trade per head of say, Belgium, New Zealand, and the United States of America. Of all the countries mentioned in the foregoing table, the trade per unit of population for any year was greatest in New Zealand (£53 13s 4d.), with Belgium next, (£48 18s. 1d. in 1912), whereas for the United States the trade was only £13 9s. 11d. per inhabitant. Belgium and New Zealand represent conditions almost directly opposite to one another in the scheme of industrial development, yet the trade per head of each is abnormally high in comparison with that of most other countries. The large trade of Belgium was attained by the export of the products of highly organised manufacturing industries, based on the supplies of coal and iron within the country, in exchange for the raw materials for those industries and for food. In New Zealand the circumstances are reversed, inasmuch as in that country the energies of the people are mainly applied to primary industries, the produce of which, being largely in excess of local requirements, is exported in exchange for manufactured goods. The relatively small trade per head of population of the United States, as compared with Belgium or New Zealand, does not indicate that the people of the United States are in an inferior condition, but rather that their industries are more nearly balanced, with the result that a large proportion of the requirements of the nation is supplied from within its own territory, and consequently a smaller foreign trade is sufficient to supply the fewer remaining wants of the people, or, in other words, it indicates that as a nation the United States is more nearly self-contained.

The small foreign trade per inhabitant of Japan, Spain, and Portugal is, undoubtedly, due in some measure to a lower standard of living, but to what extent this factor is responsible, and how much is due to the capacity to supply all kinds of material wants from its own resources, could be ascertained only from a consideration of the general social and industrial conditions prevailing in each country. It is further obvious that circumstances may arise when enlargement of both imports and exports is actually a consequence of temporary economic difficulties. For example, in 1903, owing to shortage in the local supply, it became necessary to *import* wheat and flour into Australia to the value of £2,556,968, and to meet the charges for this by equivalent *exports*, the effect, considered *per se*, being to enlarge both. In this case the increase is not an evidence of prosperity, nor can the increase of imports into the United Kingdom during 1915, due to purchases of war material, be considered as an advantage to that country.

## § 12. Trade of the United Kingdom with Australia, compared with Competing Countries.

1. Proportion of Trade from United Kingdom and Competing Countries.—The failure of the United Kingdom to maintain the position formerly held in the import trade of Australia has been a matter of more than ordinary interest for some years. Since 1908, a permanent resident Commissioner, appointed by the British Board of Trade, has been established in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From the 8th August, 1907, the Commonwealth Customs Tariffs have provided special rates in

favour of goods from the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market. The percentages given in the following table shew the proportions of the imports into Australia from the United Kingdom, and from other countries mentioned, during each of the years 1886 to 1916-17:—

**PROPORTION OF COMMONWEALTH IMPORT TRADE FROM VARIOUS COUNTRIES,  
1886 to 1916-17.**

Year.	Percentage Proportions from—					Year.	Percentage Proportions from—				
	United K'dom	British Poss'ns	Germ'y.	United States.	Total Foreign C'tries.		United K'dom.	British Poss'ns.	Germ'y.	United States.	Total Foreign C'tries.

1897	66.22	10.72	5.75	10.10	23.06	1913	59.70	12.42	6.22	11.94	27.88
1898	66.62	10.88	5.86	10.16	22.50	1914-15	58.83	14.64	2.02	14.89	26.54
1899	61.85	11.75	6.07	13.00	26.40	1915-16	51.26	16.39	0.05	19.81	32.35
1900	61.28	11.28	6.54	12.16	27.44	1916-17	52.47	16.03	0.06	20.37	31.50
1901	59.47	11.22	6.59	13.80	29.31						

In order to draw accurate conclusions from the above table, however, special attention must be given to the nature of imports from the United States, since the imports from that country have in some years been increased by imports of breadstuffs, a trade in which the United Kingdom could not participate. The years affected by the imports of breadstuffs were 1886, 1889, 1896, 1897, 1903 and 1914-15. Increased imports of such items as kerosene oil and timber also tend to increase the proportion of imports from the United States without any prejudicial effect on the trade of the United Kingdom. Similar modification is not necessary in regard to Germany, as the nature of the imports from that country was substantially the same as from the United Kingdom.

It has already been pointed out in this chapter that, prior to the year 1905, imports into the Commonwealth were recorded only against the country whence they were directly imported. Although the values of direct imports do not afford satisfactory data, it is necessary for any comparison extending further back than 1905 to use such figures. These figures are unsatisfactory on account of the varying proportions of indirect trade.

In order to furnish a comparison free from such trade as, from its nature, is not open to the United Kingdom, the following table, shewing the direct imports during the years 1886, 1906, 1913, and 1916-17 of the principal classes of goods which enter largely into the trade of the countries named, has been prepared. It may be mentioned that the imports for the year 1886 were extracted from the "Statistical Registers" of the several States for a comparison—published in a previous issue—with the year 1906, and as their compilation involved a large amount of labour they are again utilised for comparison with the later years.

**PRINCIPAL DIRECT IMPORTS INTO THE COMMONWEALTH FROM THE UNITED KINGDOM, GERMANY, AND THE UNITED STATES, 1886, 1906, 1913 AND 1916-17.**

Nature of Imports.	Year.	United Kingdom.	Germany.	United States.	All Countries.

	1916-17	52.34	0.06	20.38	100

The foregoing table shews that the share of the United Kingdom, as indicated by the records according to "Country of Shipment," in the trade of those classes of goods enumerated—representing about 80 per cent. of the total imports from that country—has declined from 89.31 per cent. of the whole in 1886 to 61.96 per cent. in 1916-17. The value of these imports from the United Kingdom has increased from £20,489,153 in 1886 to

only £31,932,680 in 1916-17, or by 55.85 per cent., while the total value of similar imports has increased from £22,937,818 to £51,541,094, or by 124.72 per cent. Had the same proportion of the total trade in these goods been shipped from the United Kingdom during 1916-17 as in 1886, it would have represented £46,031,351 instead of £31,932,680.

The following table gives an analysis of the imports during the quinquennium 1908-12, and the years 1913 to 1916-17 according to the countries of origin of the goods, and has been extended to include the products of Japan.

**IMPORTS INTO THE COMMONWEALTH OF PRODUCTS OR MANUFACTURES OF THE UNITED KINGDOM, FRANCE, GERMANY, JAPAN, AND THE UNITED STATES OF AMERICA, DURING THE YEARS 1908-12 to 1916-17.**

In previous issues this table has included Belgian imports. As it will be some time before Belgian trade will regain its pre-war dimensions, figures relating to the imports from Japan have been substituted.

It is gratifying to find that, notwithstanding the war, the United Kingdom has been able to so well maintain her share of the import trade of the Commonwealth. It will be noticed that, of the total of the groups shewn in the foregoing tables, the United Kingdom supplied 55.54 per cent. during 1916-17, as against 58.30 per cent. during 1913.

Apart from the collapse of the trade with Belgium and Germany in consequence of the war, the most striking feature of the figures given above, perhaps, is the increased proportion of the trade which has fallen to the United States. In the latest pre-war year (1913), the share of the United States in the "competitive" groups was £5,341,532, or 10.34 per cent., whereas in 1916-17 it was £9,259,509, or 17.96 per cent. The following are some of the principal lines in which United States' sales to Australia during 1916-17 were increased over those of 1913; and the amount of such increases:—Fish, £62,345; cocoa and chocolate, and confectionery, £27,070; potable spirits, £21,643; tobacco, £68,458; apparel and textiles, £1,075,432; mixed metals—aluminium, bronze, etc., £44,346; iron and steel unmanufactured or partly manufactured, £395,180; manufactured metals and machinery, £794,312; glass and glassware, £197,099; indiarubber and manufactures thereof, £291,673; leather and manufactures of, £254,711; paper and stationery, £442,101; fancy goods, £24,949; jewellery, £40,484; drugs and chemicals, £292,754; ammunition and explosives, £57,356; brushware, £16,064; electrical materials, £42,921; pianos and parts thereof, £150,564; motor vehicles and parts thereof, £652,365; bicycles, tricycles, and parts, £33,974; paints and varnishes, £53,818.

The more prominent position taken by Japan in the supply of these competitive goods is also a noticeable development of the past three years. Although the value of the imports of competitive goods from Japan is much less than from America, the rate of increase has been far greater—from £673,519 in 1913 to £2,652,354 in 1916-17, equal to 294 per cent. The classes of goods chiefly responsible for this increase were—Apparel and textiles, £1,136,268; metal manufactures and machinery, £187,153; china and porcelain ware, £80,965; earthenware, £30,981; glass and glassware, £128,148; paper, £23,778; stationery, £182,461; fancy goods, £100,291; optical, surgical, and scientific instruments, £11,878; sulphur, £219,498; bags, baskets, trunks, etc, £38,542; brushware, £36,795; matches, £20,873.

It may, perhaps, be necessary to explain the magnitude of imports of German goods during the year 1914-15, of which nearly eleven months were under war conditions. In the first place, a number of German ships *en route* to Australia, were, on the outbreak of war, interned in neutral ports and in South Africa. Subsequently the cargoes of these vessels were released and forwarded to Australia. British ships on the water on the 4th August, 1914, also, subsequently delivered their cargoes, which included German goods. Further, the earlier proclamations relating to trading with the enemy did not prohibit the importation of goods of enemy origin, provided they had not been purchased from an enemy country by a resident in Australia since the outbreak of war. Proclamation of the 12th September, 1914, provided that "where an enemy has a branch locally situated in British, allied or neutral territory, not being neutral territory in Europe, transactions by or with such branch shall not be treated as transactions by or with an enemy." It was not until the 11th December, 1915, that the importation, except with the consent in writing of the Minister of State for Trade and Customs, was prohibited of goods manufactured or produced in or bought directly or indirectly from an enemy country. Some goods of German origin, and also some German specie have been sent down from the captured German colonies in the Pacific.

**2. Preferential Tariff.**—The Tariff Act of 1908 provided preferential tariff rates in favour of goods produced or manufactured in the United Kingdom. Subsequent amendments of the tariff have extended the list of articles to which the preferential rates apply. In the schedule submitted to Parliament on the 3rd December, 1914, the extension of the operation of preferential rates has been very material, and has been accompanied in many instances by an increase of the margin in favour of the United Kingdom. On the introduction of the preferential treatment of British goods, it was

required that British material or labour should represent not less than one-fourth the value of such goods. From the 1st September, 1911, it has been required, in regard to goods only partially manufactured in the United Kingdom, that the final process or processes of manufacture shall have been performed in the United Kingdom, and that the expenditure in material of British production and/or British labour shall have been not less than one-fourth of the factory or works' cost of the goods in the finished state.

Recent editions of this Year Book have contained exhaustive analyses of the imports into the Commonwealth, for the purpose of measuring the effect of the preferential treatment of British goods. The method adopted was to contrast the relative proportion of the trade supplied by the United Kingdom in respect to goods subject to preferential tariff rates with the proportion of goods of the same class supplied in unrestricted competition under the general tariff. The most satisfactory data for the purpose was furnished by two classes of goods, viz., "Apparel and Textiles" and "Machinery and Manufactures of Metals." Under the existing tariff, preferential treatment has been so extended as to cover practically all goods of these classes, and consequently the basis of comparison no longer exists. Prior to the existing tariff, just about one-half of all imports and about 60 per cent. of imports from the United Kingdom were affected by the preferential tariff, whereas, under the tariff now in operation, nearly 80 per cent. of all imports and about 90 per cent. of imports of United Kingdom origin during 1915-7 were affected by the preferential tariff.

**3. Preferential Tariffs of the British Empire.**—The second report of a Special Committee of the London Chamber of Commerce on Trade During and After the War gives the following outline of the systems of preferential tariffs within the British Empire and the tariff arrangements between British Dominions or Colonies and Foreign Countries, together with a list of countries with whom Great Britain had concluded commercial treaties for "Most-Favoured-Nation" treatment.

#### PREFERENCE TARIFFS OF THE BRITISH DOMINIONS AND COLONIES IN FAVOUR OF IMPORTS FROM THE UNITED KINGDOM.

1. *Commonwealth of Australia.*—The Tariff Act No. 7 of 1908, as amended by Acts No. 39 of 1910, and 19 of 1911, and by resolution of the Commonwealth Parliament on 3rd December, 1914, since confirmed by the Customs Tariff Validation Act of 1917, provides for preferential rates of duty on goods 5 to 10 per cent. *ad valorem* lower than the general rates of duty.
2. *Dominion of New Zealand.*—Preferential treatment is accorded produce and manufactures of the British Empire under the Tariff Act No. 35 of 1908 as amended in 1915 by the imposition of *additional* duties of 10 per cent. *ad valorem* on certain goods which are *not* the produce or manufacture of some part of the British Dominions.
3. *Union of South Africa.*—Preferential treatment is accorded under the Tariff Act No. 26 of 1914, as amended by Act 22 of 1915, by means of a rebate of import duty on certain British goods to the extent of 3 per cent. *ad valorem*, and in some instances rebates equivalent to one-fifth of the duty.
4. *Rhodesia.*—Provision is made in the Customs Tariffs of Southern and Northern Rhodesia for the preferential treatment of British goods, by according a rebate of duty upon certain articles the produce or manufacture of the United Kingdom.

5. *Dominion of Canada*.—The Customs Act No. 11 of 1907 contains a British Preferential Tariff providing for special rates of duty for British goods, 5, 7½, and 10 per cent. *ad valorem* lower than the general rates of duty.
6. *St. Lucia, St. Vincent, Barbadoes, Grenada, Leeward Isles, Trinidad and Tobago, British Guiana*.—Under the Canadian-West Indian Reciprocity Agreement of 1912, certain goods, the growth, produce or manufacture of the United Kingdom, the Dominion of Canada and Newfoundland, are accorded preferential rates of duty when imported into the countries indicated, equivalent to a rebate of one-fifth of the general rates of duty.

#### TARIFF ARRANGEMENTS BETWEEN BRITISH DOMINIONS OR COLONIES AND FOREIGN COUNTRIES.

- Canada*.—1. The French Convention Act of 1908 provides that certain articles of French produce or manufacture on importation into Canada are entitled to enjoy the benefit of the Intermediate Tariff, or the benefits of a special tariff provided for in that convention, affecting a limited number of goods of special interest to French manufacturers and producers.
2. Certain commercial agreements have also been made with Belgium, the Netherlands and Italy, extending the advantages of the intermediate tariff to certain products of those countries.
  3. In addition, in view of treaties or conventions with His Majesty, certain products of the following countries are accorded the terms and conditions granted in respect of similar French products :—

Argentine Republic	Denmark	Norway	Spain	Switzerland
Colombia	Japan	Russia	Sweden	Venezuela

#### INTER-COLONIAL RECIPROCAL AGREEMENTS.

1. There exist reciprocal tariff agreements between Australia and South Africa, New Zealand and South Africa, Canada and New Zealand, and the West Indies and Canada.
2. In addition Canada grants the preferential tariff rates to India, Ceylon, Straits Settlements and other British Colonies and Southern Rhodesia; and New Zealand gives the preferential tariff to produce or manufactures of any part of the British Dominions.
3. Rhodesia grants preferential treatment to products of Canada, Australia and New Zealand.

#### MOST-FAVOURED-NATION TREATMENT.

In commercial treaties concluded between Great Britain and the *foreign (neutral) countries* named in the appended list there are "most-favoured-nation" clauses.

Argentine Republic	Denmark	Netherlands	Portugal*	Switzerland
Bolivia	Greece*	Nicaragua	Roumania*	United States*
China	Honduras	Norway	Salvador	Uruguay
Colombia	Liberia	Paraguay	Siam	Venezuela
Corea	Mexico	Persia	Spain	
Costa Rica	Morocco	Peru	Sweden	

---

\* Since joined the Allies.

Similar clauses exist in commercial treaties with the undermentioned *allied countries* :—

Belgium France Italy Japan Montenegro Russia Serbia.

Most-favoured-nation treatment was also granted by the undermentioned *enemy countries* :—

Austria-Hungary Bulgaria Germany Turkey.

No commercial treaties have been concluded between Great Britain and Brazil, Chile, Cuba, or Guatemala.

### § 13. Customs Tariff, 1914.

The following tables shew as nearly as possible the results which would be obtained by applying to the imports of 1913 the rates of duty imposed under the tariffs of 1908-11 and 1914 respectively. The figures for 1913 have been selected in preference to those for 1914-15, because it was considered that the trade of the earlier year would represent normal conditions more approximately :—

#### TOTAL IMPORTS.—COMPARISONS OF TARIFFS FOR 1908-11 and 1914 APPLIED TO TOTAL IMPORTS DURING 1913.

Class*	Value of Imports, 1913.	Under Tariff of 1908-11.					Under Tariff of 1914.
